Extension Summary

High School Math
Extension 91311

Student: Linda   CCLS Code: F.IF
High School Math   Extension 91311

Extension: Complete a function table (e.g., fill in the input/output information). (91311)

Task: The student will complete a function table (e.g., given a function table with one or more values(s) missing, the student fills in the missing values(s)). (AT91311)

Note: In this sample, the materials presented to the student are tactile, and there is only one distracter. The notation indicates that the student will be making her response by hitting a switch. Teachers should have the student respond using the mode of communication that is most typical for the student. The activity is designed to be very simple, with the relationship of add one used. This is acceptable. Teachers have flexibility in designing the details of the activity so that it is appropriate for the student. Multiple steps were used to provide the student with multiple opportunities to respond; however, if appropriate for the student, the teacher could provide the student with only one step. Doing so would limit the level of accuracy to zero percent or one hundred percent.
