Participation and Performance of Students Using Accommodations on the New York State Testing Program

Summary

- Participation data indicated high accommodation participation rates for students with disabilities (SWD) and English Language Learners (ELL) who participated in the regular Grades 3–8 assessments and the New York State Alternate Assessment (NYSAA) in 2010.
- Participation data indicated high participation rate for students with disabilities using test accommodations on the regular Grades 3–8 tests in 2010. High accommodation participation rate was also found in the June 2008 Regents Examination in Integrated Algebra, the June 2009 Regents Examination in Geometry and the June 2010 Regents Examination in Algebra 2/Trigonometry.
- Participation data indicated high participation rate for English Language Learners using test accommodations on the regular Grades 3–8 tests in 2010 as well as for the June 2008 Regents Examination in Integrated Algebra. Moderate accommodation participation rate was found in the June 2009 Regents Examination in Geometry and low accommodation participation rate was found in the June 2010 Regents Examination in Algebra 2/Trigonometry.
- Student performance using test accommodations on the regular Grades 3–8 tests, the 2008 June Regents Examination in Integrated Algebra, the 2009 June Regents Examination in Geometry and the June 2010 Regents Examination in Algebra 2/Trigonometry were comparable to the results obtained from SWD and ELL subgroups.
- High internal consistency provided sound evidence of reliability for student using accommodations on the 2008 June Regents Examination in Integrated Algebra, the 2009 June Regents Examination in Geometry and the 2010 Regents Examination in Algebra 2/Trigonometry.
- Factor analysis results provide evidence of essential unidimensionality of the construct measured by the 2008 June Regents Examination in Integrated Algebra, the 2009 June Regents Examination in Geometry and the 2010 June Regents Examination in Algebra 2/Trigonometry for students using test accommodations.
- Grades 3–8 Math Test has Braille and large-type versions. It has also been translated into various foreign languages. The number of students using alternative forms is recorded.

NYS Procedures for Determining Appropriate Accommodations for Students with Disabilities (SWD) and English Language Learners (ELL)

New York State has guidelines for Committees on Special Education to determine appropriate accommodations for students with disabilities. See: http://www.vesid.nysed.gov/specialed/publications/policy/testaccess/policyguide.htm.

Student Participation on the New York State Assessments

Students with Disabilities

Table 1 shows the data for students with disabilities who participated in the 2010 Grades 3–8 English language arts (ELA) and Mathematics Tests and in the 2010 NYSAA. In 2010, 97.7% participated in the Grades 3–8 ELA Tests and 97.9% participated in the Grades 3–8 Mathematics Tests.

Table 2 shows the data on the numbers and percents of students with disabilities who used accommodations when taking the 2010 Grades 3–8 ELA and Mathematics Tests. In 2010, 90.3% of students used accommodations when taking the Grades 3–8 ELA Tests and 86.7% of students used accommodations when taking the Grades 3–8 Mathematics Tests.

Table 1: Participation of Students with Disabilities in 2010 Grades 3–8 ELA and Mathematics Tests and the NYSAA

	Grades 3–8 ELA Tests	Grades 3–8 Mathematics Tests
Number of students with disabilities continuously enrolled	229,497	229,448
Number of students with disabilities who participated in the State Tests/NYSAA	224,241	224,616
Percent of students with disabilities who participated in the State Tests/NYSAA	97.7%	97.9%

Percent of students with disabilities taking the State Tests, using accommodations	90.3%	89.6%

Source: 2010 Technical Report – English Language Arts Grades 3–8 and Mathematics Grades 3–8.

Tables 3, 4 and 5 show the use of accommodations by students with disabilities when taking the June 2008 Regents Examination in Integrated Algebra, the June 2009 Regents Examination in Geometry, and the June 2010 Regents Examination in Algebra 2/Trigonometry. Demographic data was only collected during the initial administration years of each test. For these administrations, 94.0% of the students with disabilities used accommodations for June 2008 Regents Examination in Integrated Algebra, 92.8% of the students with disabilities used accommodations for June 2009 Regents Examination in Geometry, and 92.6% of the students with disabilities used accommodations for Regents Examination in Algebra 2/Trigonometry.

Table 3: Participation of Students with Disabilities in June 2008 RegentsExamination in Geometry and the Use of Accommodations

English language learners (ELLs)

Table 6 shows the data for ELLs who participated in the 2010 Grades 3–8 ELA and Mathematics Tests and in the 2010 NYSAA. In 2010, 98.7% of students participated in the Grades 3–8 ELA Tests and 99.2% of students participated in the Grades 3–8 Mathematics Tests.

Table 7 shows the data on the numbers and percents of ELLs who used accommodations when taking the 2010 Grades 3–8 ELA and Mathematics Tests. In 2010, 86.0% used accommodations when taking the Grades 3–8 ELA Tests and 82.7% when taking the Grades 3–8 Mathematics Tests.

 Table 6: Participation of English Language Learners in 2010 Grades 3–8 ELA and

 Mathematics Tests and the NYSAA and the Use of Accommodations

	Grades 3–8 ELA Tests	Grades 3–8 Mathematics Tests

Student Performance on the New York State Assessments

Tables 11, 12, 13, 14 and 15 provide the Performance Level Distribution Summaries for the statewide student population, the students with disabilities and ELL populations as wholes, and for students with disabilities and ELLs who both used and did not use accommodations when taking the Grades 3–8 ELA and Mathematics Tests, the June 2008 Regents Examination in Integrated Algebra, the June 2009 Regents Examination in Geometry and the June 2010 Regents Examination in Algebra 2/Trigonometry.

The results for the students with disabilities and ELLS who used accommodations were comparable to the results of the students with disabilities and ELL subgroups as wholes.

Demographic Category (Subgroup)	N-Count	Percent Of Total N	Level I %	Level II %	Level III %	Level IV %
Statewide student population	1,194,747	100	10.7	36.1	43.1	10.2
Students with disabilities	179,092	15.0	38.3	46.7	13.8	1.1
Students with disabilities using accommodations	161,666	13.5	39.7	46.8	12.6	0.9
Students with disabilities not using accommodations	17,426	1.7	25.9	45.5	25.1	3.4
English language learners (ELLs)	79,217	6.6	39.4	46.3	13.2	1.2
ELLs using accommodations	68,163	5.7	37.5	47.3	14.0	1.2
ELLs not using accommodations	11,054	0.9	51.3	39.6	8.3	0.7

Reliability and Validity Results for Students Using Test Accommodations

Internal Consistency

Test reliability is directly related to score stability and standard error. As such, it is an essential element of test fairness and validity. Tables 15, 16 and 17 present the reliability coefficients of the tests for students with disabilities and ELLs and students using test accommodations. It is inferred from the finding of high coefficients that the test questions measured the same domain of skill, and are reliable and consistent. All the coefficients for total test reliability are in the range of 0.88–0.92, which indicates high internal consistency and provides sound evidence of test reliability.

Table 15: Test Reliability by Subgroup, June 2008 Regents Examination inIntegrated Algebra

Demographic Category (Subgroup)	N-Count	Cronbach's Alpha
Statewide student population	176,801	0.92
Students with disabilities	14,107	0.88
Students with disabilities using accommodations	13,257	0.88
Students with disabilities not using accommodations	850	0.89
English language learners (ELLs)	6,129	0.90
ELLs using accommodations	4,606	0.89
ELLs not using accommodations	1,523	0.91

Factor analysis

Construct validity, what scores mean and what kinds of inferences they support, is often considered the most important type of test validity. Empirical studies of the factor structure (dimensionality) of the test provide one type of evidence of construct validity. A principal component factor analysis was conducted to assess the dimensionality of construct for students with disabilities and ELLs using test accommodations. As can be seen in Tables 18, 19 and 20, a large first principal component demonstrates the common factor – student ability – underlying student responses to test items. The evaluation of Eigenvalue magnitude and the proportions of variance among factors with loadings exceeding 1, as explained by the main and secondary factors, provide evidence of the essential unidimensionality of the construct measured by the tests for students using test accommodations. The data for these students were comparable to that of the total student population.

Table 18: Factor Analysis by Subgroup, June 2008 Regents Examination inIntegrated Algebra

Subaroup	Initial Eigenvalues				
Subgroup	Component	Total	Proportion		
	1	10.310	0.80
