Audiologist

Audiologists have training in anatomy and physiology, hearing aids, cochlear implants, electrophysiology, acoustics, neurology, and counseling.

Education: Audiologists must have obtained at least a Masters degree in speech-language pathology and/or Audiology.

Audiologists are required to hold and maintain a NYS license. To maintain the licensing, Continuing Education Units need to be maintained by completing educational trainings related to the field of Audiology.

Many Audiologists are certified by the American Speech-Language and Hearing Association (ASHA).
