Statewide Coordinator for Special Education, P-12 Office of Special Education
JAMES P. DELORENZO

The State Education Department does not discriminate on the basis of age, color, religion, creed, disability, marital status, veteran status, national origin, race, gender, genetic predisposition or carrier status, or sexual orientation in its educational programs, services and activities. Portions of this publication can be made available in a variety of formats, including Braille, large print or audio tape, upon request. Inquiries concerning this policy of nondiscrimination should be directed to the Department’s Office for Diversity, Ethics, and Access, Room 530, Education Building, Albany, NY 12234.
OVERVIEW

Public Law 108-446, the Individuals with Disabilities Education Act (IDEA) 2004, requires the State Education Department (SED) to develop and submit a six year State Performance Plan (SPP) to the Office of Special Education Programs (OSEP) at the U.S. Education Department (USED). The SPP is designed to evaluate the State's efforts to implement the requirements and purposes of IDEA and describe how the State will improve results. OSEP has identified three monitoring priorities and 20 indicators relating to the priority areas that must be reported in the SPP. For each of the indicators, the State must establish measurable and rigorous targets and improvement activities for a six-year period of time. The priority areas and indicators addressed in the SPP for 2005-2012, as revised by OSEP, are as follows.

Priority: Free Appropriate Public Education in the Least Restrictive Environment

1. Percent of youth with individualized education programs (IEPs) graduating from high school with a regular diploma.
2. Percent of youth with IEPs dropping out of high school.
3. Participation and performance of children with disabilities on statewide assessments:
   • Percent of districts meeting the State’s Adequate Yearly Progress (AYP) objectives for progress for the disability subgroup.
   • Participation rate for children with IEPs.
   • Proficiency rate for children with IEPs against grade level, modified and alternate achievement standards.
4. Rates of suspension and expulsion:
   • Percent of districts identified by the State as having a significant discrepancy in the rate of suspensions and expulsions of children with disabilities for greater than 10 days in a school year; and
   • Percent of districts identified by the State as having a significant discrepancy in the rates of suspensions and expulsions of greater than 10 days in a school year of children with disabilities by race and ethnicity, and policies, procedures or practices that contribute to the significant discrepancy and do not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards.
5. Percent of children ages 6 through 21 with IEPs:
   • Inside the regular class 80% or more of the day;
   • Inside the regular class less than 40% of the day; and
   • In separate schools, residential facilities or homebound/hospital placements.
6. Percent of preschool children (aged 3 through 5) with IEPs attending a:
   • Regular early childhood program and receiving the majority of special education and related services in the regular early childhood program; and
   • Separate special education class, separate school or residential facility.
7. Percent of preschool children with IEPs who demonstrate improved:
   • positive social-emotional skills (including social relationships);
   • acquisition and use of knowledge and skills (including early language/communication and early literacy); and
   • use of appropriate behaviors to meet their needs.
8. Percent of parents with a child receiving special education services who report that schools facilitated parent involvement as a means of improving services and results for children with disabilities.

Priority: Disproportionality

9. Percent of districts identified with disproportionate representation of racial and ethnic groups in special education and related services that is the result of inappropriate identification.
10. Percent of districts with disproportionate representation of racial and ethnic groups in specific disability categories that is the result of inappropriate identification.

Priority: Effective General Supervision Part B
Child Find and Effective Transitions (district-level indicators)
11. Percent of children with parental consent to evaluate, who were evaluated within State required timelines.
12. Percent of children referred by Part C (Early Intervention Services) prior to age three (3), who are found eligible for Part B (preschool special education), and who have an IEP developed and implemented by their third birthdays.
13. Percent of youth aged 15 and above with an IEP that includes appropriate measurable post-secondary goals that are annually updated and based upon an age appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those postsecondary goals, and annual IEP goals related to the student’s transition services needs, with evidence that the student was invited to the Committee on Special Education (CSE) meeting where transition services are to be discussed and evidence that, if appropriate, a representative of any participating agency was invited to the CSE meeting with the prior consent of the parent or student who has reached the age of majority.
14. Percent of youth who are no longer in secondary school, had IEPs in effect at the time they left school, and within one year of leaving high school were:
   • Enrolled in higher education;
   • Enrolled in higher education or competitively employed; or
   • Enrolled in higher education or in some other postsecondary education or training program; or competitively employed or in some other employment.

General Supervision (state-level indicators)
15. General supervision system (including monitoring, complaints, hearings, etc.) identifies and corrects noncompliance as soon as possible but in no case later than one year from identification.
16. Percent of signed written complaints with reports issued that were resolved within 60-day timeline or a timeline extended for exceptional circumstances with respect to a particular complaint or because the parent (or individual or organization) and the public agency agree to extend the time to engage in mediation or other alternative means of dispute resolution.
17. Percent of adjudicated due process hearing requests that were fully adjudicated within the 45-day timeline for school age students or 30-day timeline for preschool
students, or a timeline that is properly extended by the hearing officer at the request of either party, or in the case of an expedited hearing, within the required timelines. 

18. Percent of hearing requests that went to resolution sessions that were resolved through resolution session settlement agreements. 

19. Percent of mediations held that resulted in mediation agreements. 

20. State reported data (618) and SPP and Annual Performance Report (APR) are timely and accurate. 

The State must report annually to the public and OSEP on the State’s performance on each target for all 20 of the indicators in the SPP. APRs are due to OSEP by February 1 of each year. Furthermore, the State must also report annually to the public on each local educational agency’s (LEA) performance on the targets for the first 14 indicators. LEA public reports must be posted within 90 days of the date the State submits its APR to OSEP and can be found at http://eservices.nysed.gov/sepubrep/. 

Questions regarding the SPP may be directed to the New York State Education Department Office of Special Education at 518-473-2878. For more information on these federal requirements see www.ed.gov/policy/speced/guid/idea/bapr/index.html.
## TABLE OF CONTENTS

Overview of the State Performance Plan Development .......................................................... 1

Indicator 1: Graduation Rates ................................................................................................. 9

Indicator 2: Drop-Out Rates .................................................................................................. 21

Indicator 3: Participation and Performance on Statewide Assessments .................................. 28

Indicator 4: Rates of Suspension and Expulsion (Rev. 8/12) ..................................................... 41

Indicator 5: Least Restrictive Environment – School Age ....................................................... 57

Indicator 6: Least Restrictive Environment – Preschool .......................................................... 65

Indicator 7: Preschool Outcomes ............................................................................................ 69

Indicator 8: Parental Involvement .......................................................................................... 82

Indicator 9: Disproportionality in Special Education by Race/Ethnicity .................................... 95

Indicator 10: Disproportionality in Classification/Placement by Race/Ethnicity ...................... 104

Indicator 11: Child Find ....................................................................................................... 111

Indicator 12: Early Childhood Transition ................................................................................ 127

Indicator 13: Secondary Transition ....................................................................................... 137

Indicator 14: Post-School Outcomes ..................................................................................... 152

Indicator 15: Identification and Correction of Noncompliance ............................................. 172

Indicator 16: Complaint Timelines ....................................................................................... 180

Indicator 17: Due Process Timelines .................................................................................... 184

Indicator 18: Hearing Requests Resolved by Resolution Session ........................................ 189

Indicator 19: Mediation Agreements ....................................................................................... 194

Indicator 20: State Reported Data ......................................................................................... 198

Attachment 1: Report of Dispute Resolution

Attachment 2: Overview of NYS Sampling Methodology
Overview of the State Performance Plan Development

New York State’s (NYS) Part B State Performance Plan (SPP) for 2005-2012 was developed as follows:

In April 2005, the Office of Vocational and Educational Services for Individuals with Disabilities (VESID) convened a work group to develop the SPP. The workgroup included representatives from the following VESID units: Special Education Policy and Partnerships, Quality Assurance, and Strategic Evaluation, Data Collection, Analysis and Reporting (SEDCAR). VESID staff developed the SPP in consultation with staff from the Office of Elementary, Middle, Secondary and Continuing Education (EMSC) responsible for data collection and reporting under the No Child Left Behind Act (NCLB). Data for indicators requiring baselines reported in the 2005-06 SPP were obtained and analyzed to identify trends and related data for establishing targets. Implementation activities that impacted those trends were also identified.

In August 2005, VESID staff attended the OSEP Summer Institute where the requirements for the SPP were provided to states.

VESID issued a State memorandum in September 2005 to provide information to the field about the requirements for the SPP.

A report was made to the Board of Regents in October 2005 to obtain their input on addressing the issues relating to the development and implementation of the SPP.

Meetings were held with various constituent groups beginning in late September into early November 2005 from a broad spectrum of stakeholders on various stages of the initial development and revisions of the SPP. Stakeholders provided recommendations for State targets, improvement activities and methods to collect data on new indicators,

Composition of the stakeholder groups

In separate meetings conducted from late September until early November 2005, the following groups provided input into the State’s development of the SPP. In total, approximately 420 individuals participated in these meetings, providing stakeholder input on the development of the State’s Performance Plan.
- Regional and Central office special education staff of VESID.
- Board of Regents, Subcommittee on EMSC and VESID.
- Statewide meeting of the Special Education Training and Resource Centers (SETRC) and representatives of the statewide network of Regional School Support Centers (RSSC). After the full group presentation and overview, there were small group discussions on selected indicators and report out to the larger group. This stakeholder group represented the State’s technical assistance networks for special education and included representatives from every region of the State.
Part B State Performance Plan (SPP) for 2005-2012
New York State
Revised August 2012

• Local school district Committee on Special Education (CSE) and Committee on Preschool Special Education (CPSE) directors and chairpersons, Board of Cooperative Educational Services (BOCES) directors, principals and assistant principals of schools, directors of preschool programs, school psychologists and regional trainers representing public school districts, BOCES and approved private schools and approved preschool programs.

• Representatives from Parent Training and Information Centers, including representatives from Sinergia, Inc., Parent-to-Parent of NYS, Advocates for Children, Long Island Parent Center, United We Stand of NY, The Advocacy Center and Resources for Children with Special Needs. This meeting was held in New York City (NYC).

• Representatives from the New York City Department of Education (NYCDOE) participated in a meeting held in NYC. A follow-up telephone conference call was conducted with two Parent Coordinators from the NYCDOE to further obtain input on Indicator 8 (Parent Involvement).

• To ensure broad representation from stakeholders in a forum that would foster interactive discussion on various indicators from different perspectives, an invitational group was convened, represented by district superintendents, superintendents and assistant superintendents of schools, directors of approved private schools, representatives from institutions of higher education, New York State United Teachers, School Boards Association, NYS Association of Retarded Citizens, Inc. (NYSARC), NYS Parent Teachers Association (NYSPTA), approved preschool programs and NYS legislative staff.

• Families Together of NYS, an Albany-based parent support and advocacy organization, convened a group of parents from the Capital District.

• The SPP was discussed with BOCES District Superintendents at statewide meetings held in October and November, and various decision points for the SPP were shared at that time. Beginning in November 2005, follow-up meetings in each of the supervisory districts were scheduled with school superintendents to review the requirements for data collection, reporting, accountability and school improvement.

• An all day meeting was held with the Commissioner’s Advisory Panel for Special Education to review recommendations received to date and to obtain further input on the submission and implementation of the SPP.

• A meeting was held with the Conference of Big Five School Districts, with representatives participating from the Syracuse, Rochester, Buffalo and NYC school districts.

How stakeholder input was obtained

The requirements set forth by the U.S. Education Department (USED) for the development of the SPP were shared with each group, including information on measures proposed by the State, current baseline information and proposed strategies. The meetings with stakeholders generally included an overview presentation, including a discussion of requirements for targets, a presentation of baseline data and included a facilitated discussion of targets, improvement strategies and proposed plans to collect data on new indicators. Depending on the size of the stakeholder meeting, both large group and small group discussions focused on particular indicators. Participants were
provided with forms with guiding questions to facilitate their input, which could be provided as part of the group process and/or in writing. Guiding questions included:

1. What factors should be considered in setting targets for this indicator (e.g., selected improvement activities, trend data, new policies, etc.)?
2. What targets would you recommend for this indicator?
3. What issues should be considered in designing a method to collect data for the new indicators?
4. What methods or strategies would you recommend?
5. What specific and targeted improvement activities would you recommend the State implement to lead to improved results toward the targets?
6. What role do you recommend our funded networks (e.g., SETRC, Early Childhood Direction Centers, Transition Coordination Sites) take in implementing the SPP and improving results in the priority areas?

**Stakeholder input on SPP revisions**

Office of Special Education (OSE)\(^1\) staff meet with various constituency groups throughout the year to share and discuss the design and implementation of NYS’ SPP, including, but not limited to, the following groups:

- Early Childhood Direction Centers
- SETRC
- Transition Coordination Sites
- Regional Special Education Technical Assistance Support Centers (RSE-TASC) (added 1/10)
- State and federal funded Special Education Parent Centers
- Commissioner’s Advisory Panel (CAP) for Special Education
- Higher Education Support Center and Higher Education Task Force
- New York University (NYU) Disproportionality Technical Assistance Center
- District Superintendents
- Other professional organizations

Annually, OSE staff meets with its State Advisory Panel to specifically obtain input on proposed targets and revisions to the SPP. The Advisory Panel is continuously kept apprised on an annual basis regarding progress and issues reflected in the SPP in order to obtain their insights and input in determining implementation strategies and need for revisions.

In October 2010, OSE staff met with its Commissioner’s Advisory Panel to establish targets and improvement activities for two additional years (FFY 2011 and 2012). Throughout the year, OSE staff engaged its funded technical assistance centers to discuss improvement activities in relation to Annual Performance Report data.

---

\(^1\) In 2010, reorganization of the New York State Education Department (NYSED) resulted in the establishment of the Office of Special Education with the Office of P-12 Education of NYSED.
Public dissemination plan

The SPP is posted on the Department’s website [http://www.p12.nysed.gov/specialed/spp/home.html](http://www.p12.nysed.gov/specialed/spp/home.html). An announcement of its availability will be provided annually through the list serve and through a memorandum to school districts, parent organizations and others interested in the education of students with disabilities. Press announcements are released to newspapers regarding its availability.

Data sources

The following current data collection sources were reviewed in determining how the State will collect baseline and annual data for each of the indicators:

- System for Tracking Education Performance (STEP)
- Pupils with Disabilities (PD) data
- Impartial Hearing Reporting System (IHRS)
- Quality Assurance Information System (QAIS)
- Comprehensive Special Education Information System (CSEIS)
- Basic Educational Data System (BEDS)
- TransQual
- New York State Dispute Resolution Association
- Post School Indicator Longitudinal Study
- Preschool Longitudinal Study
- Student Information Repository System (SIRS): NYS will begin to phase in implementation of a statewide SIRS, beginning in the 2005-06 school year for grades 3-8. The new system will be a single system to collect all the required data for NCLB as well as to meet all other State and federal reporting requirements, including data required for the Part B SPP.

Design of the SPP

NYS has, to the maximum extent possible, developed its SPP to minimize reporting burdens on school districts and emphasize opportunities for improvement. For six of the indicators requiring new data collection, NYS will collect and report data from a representative sample of school districts throughout the State (see Indicators 7, 8, 11, 12, 13 and 14). All school districts will provide data on all the indicators selected for sampling distributed over a six-year period beginning with the initial year in which data on the indicator is collected. In this way, a school district can focus its resources to improve results in the identified area. In some instances, the school district will be required or permitted to collect and report on a particular indicator more frequently than once every six years in order to demonstrate improvement and to have their publicly reported data reflect that improvement. All school districts are encouraged to proactively address these indicators prior to the year in which they must provide data to be used in the public reporting. An overview of the sampling methodology is provided in Attachment 2.
Summary of Revisions to the SPP, June 2007 Edition:

The NYS SPP was revised as follows:

- Indicators 1, 2, 3 – revisions to measurement, baseline data, overview and improvement activities.
- Indicator 4A – revisions to definitions of significant discrepancy and 04-05 school year data.
- Indicator 4B – revisions to definition of significant discrepancy and baseline data added from 2005-06 school year.
- Indicator 7 – assessment data at entry into preschool special education added for 2005-06 school year. USED changes to the measure.
- Indicator 8 – revision to definition of what constitutes a survey with “positive parental involvement” response and State’s calculation of “rate of positive parental involvement.” Also, baseline data are added for 2005-06 school year.
- Indicator 9 – revisions to definition of significant disproportionality and baseline data added for 2005-06 school year.
- Indicator 10 – revisions to definition of significant disproportionality and baseline data added for 2005-06 school year.
- Indicator 11 – baseline data for 2005-06 and targets added. USED changes to the indicator and measure.
- Indicator 12 – baseline data for 2005-06 and targets added. USED changes to the measure.
- Sampling schedule provided in Attachment 2 revised to complete all SPP data collection during the 2010-11 school year from all school district within six years.

Summary of Revisions to the SPP, February 2009 Edition:

The NYS SPP was revised as follows:

- Indicator 4B – revised targets to reflect that reporting on this indicator by race and ethnicity in the Annual Performance Report (APR) is not required beginning with FFY 2006, although NYS continues to monitor for this under IDEA requirements at 34 CFR §300.170.
- Indicator 5 – revised targets beginning with FFY 2007 consistent with USED changes to definitions of categories.
- Indicator 6 – suspended reporting, consistent with USED instructions.
- Indicator 7 – replaced section and added progress data, consistent with USED instructions.
- Indicator 9 – added the definition of under-representation to the Measurement.
- Indicator 10 – added the definition of under-representation to the Measurement. Also dropped language from the Indicator and Targets regarding disproportionality in special education placements, since reporting on this issue is not required under the State Performance Plan, although NYS continued to monitor for this under IDEA requirements at 34 CFR § 300.646(a)(2).
- Indicator 14 – added the SPP section with baseline and targets as submitted with the February 2008 Annual Performance Report.
Summary of Revisions to the SPP, January 2010 Edition:

The NYS SPP was revised as follows:

- **Indicator 1** – revised indicator definition; added data source; updated web link to graduation requirements; revised targets for 2008, 2009 and 2010 to add “as of four years as of August” (versus June); adjusted the language in the target chart to be consistent with the March 2009 federal requirements for lagging by one year the reporting for this indicator, using Elementary and Secondary Education Act (ESEA) definitions and timelines; and revised improvement activities.

- **Indicator 2** – revised indicator definition; included data source; revised the definition of “drop out”; adjusted the language in the target chart to be consistent with March 2009 federal requirements for the lag in reporting year for this indicator using ESEA definitions and timelines; and revised improvement activities.

- **Indicator 3c** – revised indicator definition; revised measurement language; added link for public reports of assessment results; added the statement that NYS does not administer assessments against modified achievement standards; added the data source; and revised targets and improvement activities.

- **Indicator 4** – revised indicator definition; revised measurement language; added that NYS reports data on Table 5 of Information Collection 1820-0621 and in EDFacts files; added data source; and revised improvement activities.

- **Indicator 5** – revised indicator definition; revised measurement language; added data source; revised language in targets for 2008, 2009, 2010; and revised improvement activities.

- **Indicator 6** – revised indicator definition; revised measurement language; included link for public reports of assessment results; added the statement that NYS does not administer assessments against modified achievement standards; added the data source; and revised targets and improvement activities.

- **Indicator 7** – revised measurement language; updated web link for Student Information Repository System (SIRS) Manual; added targets and revised improvement activities.

- **Indicator 8** – revised improvement activities.

- **Indicator 9** – added data source; revised improvement activities.

- **Indicator 10** – added data source; revised improvement activities.

- **Indicator 11** – revised measurement language; added data source; added note regarding sampling; revised language in targets for 2006-2010; revised improvement activities.

- **Indicator 12** – added (e) to the measurement as required by OSEP and (f) and (g) to the measurement to be accurate and consistent with NYS requirements; added data source; added note regarding sampling.

- **Indicator 13** – revised indicator definition, measurement, language under the targets for 2009 and 2010; added data source and revised improvement activities.

- **Indicator 14** – revised indicator definition, measurement, language under the 2009 and 2010 targets; added note regarding sampling and revised improvement activities.

- **Indicator 15** – added data source and revised improvement activities.

- **Indicator 16** – revised indicator definition; added data source; revised improvement activities.
Part B State Performance Plan (SPP) for 2005-2012

Revised August 2012

- Indicator 17 – revised indicator definition; added data source; revised improvement activities.
- Indicator 18 – added data source; revised improvement activities.
- Indicator 19 – added data source and revised improvement activities.
- Indicator 20 – revised measurement; added data source; updated web links to forms and materials pertaining to data collection systems; revised improvement activities.

Summary of Revisions to the SPP, April 2010 Edition:

The NYS SPP was revised as follows:
- Indicator 7 – revised targets for FFY 2010

Summary of Revisions to the SPP, February 2011 Edition:

The NYS SPP was revised as follows:
- Throughout the SPP, references to the Office of Vocational and Educational Services for Individuals with Disabilities (VESID) have been replaced with references to the Office of Special Education (OSE), except where the reference is specifically to the vocational rehabilitation program, which retains the name, “VESID.”
- Hyperlinks to internet references have been updated.
- The end date of the SPP has been extended to 2012. For all indicators, targets and improvement activities have been extended two additional years, i.e., through FFY 2012 (i.e., school year 2012-13). As appropriate, end dates of ongoing activities have been through the end of FFY 2012.
- Indicator 4B – established new baseline, targets and improvement activities.
- Indicator 6 – revised targets based on USED deferring reporting one additional year.
- Indicator 13 – revised indicator, established new baseline, targets and revised improvement activities.
- Indicator 14 – revised method to establish baseline, established new baseline, revised targets based on new baseline and revised/added improvement activities.
- Attachment 2 Sampling Plan – revised sampling plan for Indicator 7.

Summary of Revisions to the SPP, January 2012 Edition:

The NYS SPP was revised as follows:
- Indicator 1 - dates pertaining to the district total cohort were adjusted for FFY 2010 and improvement activities added.
- Indicator 2 – dates pertaining to the district total cohort were adjusted for FFY 2010 and the reference to where the definition of “drop out” can be found was revised.
- Indicator 3 – improvement activity added.
- Indicator 4A – additional data source information added.
- Indicator 4B – revised definition of significant discrepancy.
- Indicator 9 – updated web link and revised language pertaining to a district’s risk of race as it relates to disproportionate under-representation in special education.
• Indicator 10 – revised language pertaining to a district’s risk of race as it relates to disproportionate under-representation in special education.
• Indicator 11 – added improvement activities.
• Indicator 13 – added improvement activities.
• Indicator 14 – revised target date to FFY 2011.
• Indicator 15 – improvement activity added.
• Indicator 17 – added improvement activities.
• Indicator 18 – improvement activity added.
• Indicator 19 – improvement activity added.
Overview of the State Performance Plan Development

See Overview of State Performance Plan (SPP) preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

Monitoring Priority: FAPE in the LRE

Indicator 1: Percent of youth with individualized education programs (IEPs) graduating from high school with a regular diploma.
(20 U.S.C. 1416 (a)(3)(A))

*Note: The definition of Indicator 1, the Measurement and the Targets were revised in 1/10 per federal guidance issued 3/09.

Measurement: (Revised in January 2010)

Measurement for youth with IEPs is the same measurement as for all youth. The calculation is explained below.

NYS’ Measurement:

Percent of “total cohort” of students with disabilities who graduate with a high school diploma (Regents or local diploma) as of August after four years of first entering 9th grade or for ungraded students with disabilities, after four years of becoming 17 years of age.

Note: The above measurement is the same as was used in FFY 2008 (2008-09) APR, but represents a change from the data provided in prior SPPs and Annual Performance Reports (APRs). In these earlier documents, the State reported results of the total cohort after four years as of June (or for ungraded students with disabilities, after four years from becoming 17 years of age). Based on a change in federal requirements for FFY 2008, which required the State to use the same data as are used under Title I of the Elementary and Secondary Education Act (ESEA), the change has been made to report results of the total cohort, four years later, as of August (or for ungraded students with disabilities, after four years from becoming 17 years of age).

Graduation rate data for students with disabilities is calculated the same as for all students. For current year graduation requirements, see http://www.p12.nysed.gov/ciai/EducationLawandRegulations.html.

NYS uses the same graduation rate calculation and timeline established by the United States Education Department (USED) for accountability reporting under Title I of the
ESEA. At the beginning of the SPP in 2004-05, this was the percent of “graduation-rate cohort” of students with disabilities who graduated with a high school diploma (Regents or local diploma) as of August 31 of the fourth year after first entering 9th grade or for ungraded students with disabilities, after four years of becoming 17 years of age. In order to maintain consistency with ESEA in defining this measure, the definition for the graduation percent changed during school year 2005-06 to reference the “Total Cohort,” as described below.

Data Source:

Student Information Repository System (SIRS) for collecting graduation data for all students.

NYS’ Calculation for the 2009-10 School Year:

NYS baseline and targets were adjusted in FFY 2007, when the federal ESEA measure used by the State to determine graduation rate changed to being based on the performance of the “total cohort.”

The denominator is the Total Cohort. See below for the definition of the 2005 district total cohort.

The 2005 district total cohort consists of all students, regardless of their current grade level, who met one of the following conditions:

- First entered grade 9 at any time during the 2005-06 school year (July 1, 2005 through June 30, 2006); or in the case of ungraded students with disabilities, reached their seventeenth birthday during the 2005-06 school year.
- Ungraded students are included in the 2005 cohort if their birth date is between July 1, 1988 and June 30, 1989 (inclusive).

Students who have spent at least five months in district schools or out-of-district placements during year 1, 2, 3, or 4 of high school are included in the district total cohort unless they transferred to another diploma-granting program outside the district. (This five-month enrollment rule does not apply to the Statewide aggregated total cohort data displayed in the FFY 2010 APR.) For the 2005 Total Cohort, Year 1, 2, 3, and 4 are the 2005-06, 2006-07 2007-08, and 2008-09 school years, respectively.

A student will be included in the district total cohort if the student’s enrollment record in the district shows that the student was enrolled for:

- at least five continuous (not including July and August) months and the Reason for Ending Enrollment in the district was not one of the following: transferred to a school in another district, a nonpublic school, or a school outside New York; died; transferred by court order; or left the US; or
- less than five months and has an ending reason indicating that the student dropped out or transferred to an Alternative High School Equivalency Preparation Program (AHSEPP) or High School Equivalency Preparation Program (HSEPP) and the student’s previous enrollment record in that district (assuming one exists) indicates
that the student:
  a) was enrolled in the district for at least five months (not including July and August); and
  b) dropped out or transferred to a AHSEPP or HSEPP program.

The numerator for the calculation of graduation rate is the number of students with disabilities in the Total Cohort who graduated with a high school diploma (Regents or local diploma) as of August 2009 after four years of first entering 9th grade or for ungraded students with disabilities, after four years of becoming 17 years of age.

Overview of Issue/Description of System or Process

In New York State, a regular diploma is defined as a local or Regents diploma, including a Regents diploma with advanced designation requirements. The course work for high school graduation requirements may be found at:

In 2005, the Board of Regents approved policy to phase in more challenging diploma requirements over the next few years. The following chart displays the NYS diploma requirements that will be phased in over the next four years.

### DIPLOMA REQUIREMENTS

</tbody>
</table>
The safety net allows eligible students who fail a Regents examination required for graduation to meet the requirement for a local diploma by passing the Regents competency test(s) (RCT), or an approved RCT alternative, in that subject. The student may take the RCT before or after taking the Regents examination. The safety net is available to:

1. any student who is classified as disabled by the CSE at any time; and
2. students with disabilities who have been declassified at any time between grades 8 and 12, as recommended by the CSE at time of declassification; and
3. general education students identified under Section 504, as recommended in their 504 Accommodation Plan by the Multidisciplinary Team.

Students using this safety net will be eligible to receive a local diploma. Students with disabilities may also graduate with a local diploma if they score between 55 and 64 on the required Regents exams.

**Baseline Data for 2000 Graduation-Rate Cohort as of August 31, 2004. This is FFY 2004 data for the 2004-05 school year.**

Fifty-three (53) percent of youth with IEPs in the 2000 graduation-rate cohort graduated from high school within four years (as of August) compared to 77 percent of all students in that cohort. The graduation rate cohort is the official cohort for accountability under NCLB.

Forty-six (46) percent of youth with IEPs in the 2000 total cohort graduated from high school within four years (as of June) compared to 67 percent of all students in that cohort. The “total cohort” includes more students than the graduation-rate cohort and the rules for being assigned to this cohort are similar to what the rules will be for the graduation–rate cohort beginning with students who entered 9th grade or for ungraded students with disabilities who became 17 years of age in the 2003-04 school year.

**Discussion of Baseline Data**

NYS is following the performance of two cohorts until the definition of the graduation-rate cohort is revised to be similar to the definition of the total cohort. This is expected to occur with the 2003 graduation-rate cohort. The graduation-rate cohort will continue to include graduates as of August, unlike the total cohort results presented in this SPP, which include graduates as of June. The graduation-rate cohort is the official cohort of the State for accountability under NCLB, however, VESID has focused its school...
improvement activities by using data for the total cohort because the total cohort includes more students and is similar to how the graduation-rate cohort will be revised beginning with the 2003 cohort.

The tables below provide several years of data for the two cohorts. The graduation rate for students with disabilities in the 2000 graduation-rate cohort was 53 percent, lower than the graduation rates of the 1999 and 1998 graduation-rate cohorts. However, it should be noted that each year, more students with disabilities were included in the cohort. The 2000 graduation-rate cohort, for example, had 18,909 students with disabilities or 32 percent more students with disabilities than in the 1998 graduation-rate cohort with 14,306 students with disabilities. The increase in the number of students with disabilities in the graduation-rate cohort is indicative of better understanding among school districts of reporting requirements and also to some changes in the definitions of these cohorts. For the definition of each year’s accountability cohort and graduation-rate cohort, see the 2005-06 STEP reporting manual at http://www.p12.nysed.gov/irs/step/ and the Student Information Reporting System (SIRS) User Manual at http://www.p12.nysed.gov/irs/sirs/. The graduation rate of the 2001 total cohort was lower than the graduation rate of the 2000 total cohort; however, the 2001 total cohort had 26,281 students with disabilities compared to 21,262 students with disabilities in the 2000 total cohort or 24 percent more students with disabilities. The additional students in the 2001 total cohort are reflective of improvements in the State’s system of data collection that captures the results of more students, especially students who drop out of school, as well as a better understanding among school districts of reporting requirements.

The data for each graduation-rate cohort includes the summer graduates, as of August 31. The data for each total cohort includes graduates as of June 30. The years that are highlighted in the tables below represent the base year data for New York State. New York is revising its targets for the students with disabilities graduation rate to reflect the total cohort data. Once the total cohort data includes graduates as of August, NYS will consider revising its targets again for subsequent years.

The data and projected targets presented in the 2004 APR were based on the annual exiters of students with disabilities who earned a local, Regents and High School
Equivalency (HSE) diploma as a percentage of the total number of students with disabilities who earned a local, Regents, HSE and IEP diploma or who reached maximum age. These data did not consider the number of years it took to graduate nor were students with disabilities who dropped out of school included in the calculation. In addition, these data were not compared to all students or general education students.

---

1. In FFY 2006, definitions of accountability and graduation cohorts were changed.
2. In FFY 2008, the language in this target chart was adjusted to be consistent with the March 2009 federal requirements for lagging by one year the reporting for this indicator, using ESEA definitions and timelines.
3. In FFY 2009, USED requested states to add two additional years to the SPP, including adding two additional years of targets.
4. Consistent with ESEA, states will be required to set graduation rate targets for all students and for all the subgroups of students beginning with results from the 2011-12 school year. These targets are expected to be significantly higher than those set in the current SPP. NYS will revise its targets once the Board of Regents establishes these targets for ESEA.

**Improvement Activities/Timelines/Resources** (Revisions made in the January 2010 SPP are indicated by underlining of additions and double strikethrough of deletions.)

</thead>
</table>
| Beginning in 2006-07: School districts with graduation rates of higher than 18.5 percent, but less than or equal to 35 percent were identified as districts “in need of assistance.” School districts with graduation rates of 18.5 percent or less were identified as “districts in need of intervention.” For the 2010-11 school year, school districts with graduation rates of less than 38%, but more than 21%, (with exceptions for higher 5-year graduation rates) were identified as “needs assistance.” Districts with graduation rates of less than 22% over a two-year period with less than 10% improvement between the two cohorts were identified as “needs intervention” (exceptions for higher 5-year graduation rates). | 2006-12** | Special Education Quality Assurance (SEQA) Regional Offices (rev. 1/10)  
Regional Special Education Technical Assistance Support Centers (RSE-TASC) – formerly Special Education Training and Resource Centers (SETRC, Transition Coordination Sites and Positive Behavioral Interventions and Support networks)* (rev. 1/10) |
Each school district, as a result of this designation, was required to engage in one or more of the following activities to improve its graduation rates:

- Conduct a focused review
- Work with one of the State’s funded technical assistance networks to implement a Quality Improvement Process. (rev. 1/10)
- Use a portion of its IDEA Part B funds to address the area of concern
- Redirect its fiscal or human resources
- Conduct a self-review of its policies, procedures and practices
- Develop improvement plans

Develop and implement revised monitoring protocols that specifically focus on compliance issues most related to improving graduation rates. (added APR 2/08)

Beginning in 2006-07, conduct “IDEA Effective Instructional Practices” focused reviews of school districts identified as in need of intervention (see above). The review protocol targets requirements most directly related to improved instructional practices, with emphasis on:

- Individual evaluations and eligibility determinations
- IEP development and implementation
- Appropriate instruction from qualified staff
- Access to, participation and progress in the general education curriculum
- Specially designed instruction
- Instruction in literacy
- Behavioral supports
- Parental involvement

* Note: In 2008-09, VESID comprehensively redesigned its technical assistance system to expand resources statewide (see APR 2/10). For the resources and activities listed in this table, this means the former Special Education Training Resource Center (SETRC), Transition Coordination Site (TCS) and Positive Behavior Interventions and Supports (PBIS) networks were consolidated within the Regional Special Education Technical Assistance Support Centers (RSE-TASC).

**Note: Extended the end dates to 2012 coinciding with extended dates of the SPP (rev. 2/11).

Overview of the State Performance Plan Development

See *Overview of State Performance Plan (SPP)* preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

### Monitoring Priority: FAPE in the LRE

**Indicator 2**: Percent of youth with individualized education programs (IEPs) dropping out of high school.

*Note: The definition of Indicator 2, the Measurement and Target table were revised in 1/10 per federal guidance issued 3/09.*

**Measurement**: (Revised in January 2010.)

Measurement for youth with IEPs is the same measurement as for all youth. The calculation is explained below.

**NYS’ Measurement:**

Percent of “total cohort” of students with disabilities who drop out as of August after four years of first entering 9th grade or for ungraded students with disabilities, after four years of becoming 17 years of age.

Please note, the above measurement represents a change from the data provided in FFY 2007 (2007-08), FFY 2006, and FFY 2005 SPPs and Annual Performance Reports (APRs). In these earlier documents, the State reported results of the total cohort after four years as of June (or for ungraded students with disabilities, after four years from becoming 17 years of age). Based on a change in federal requirements for FFY 2008, which required the State to use the same data as are used under Title I of the Elementary and Secondary Education Act (ESEA), the change has been made to report results of the total cohort, four years later, as of August (or for ungraded students with disabilities, after four years from becoming 17 years of age).

NYS uses the same total cohort data for dropout rate calculation as are used in the ESEA graduation rate calculation and follows the timeline established by the United States Education Department (USED) under Title I of the ESEA. At the beginning of the SPP in 2004-05, this was the percent of the “graduation-rate cohort” of students with disabilities who dropped out of school. To remain consistent with ESEA changes, beginning with school year 2005-06, the reference group changed to the “total cohort.” NYS baseline and targets were adjusted in FFY 2007, when the ESEA measure used by the State to determine graduation rate changed to being based on the performance of the “total cohort.”
Data Source:

The Student Information Repository System (SIRS) for collecting dropout data for all students.

NYS Calculation for Drop Out Rate for School Year 2009-10:

For FFY 2010, the 2005 district total cohort is the **denominator**.

The 2005 district total cohort consists of all students, regardless of their current grade level, who met one of the following conditions:
- First entered grade 9 at any time during the 2005-06 school year (July 1, 2005 through June 30, 2006); or in the case of ungraded students with disabilities, reached their seventeenth birthday during the 2005-06 school year; or
- Ungraded students are included in the 2005 cohort if their birth date is between July 1, 1988 and June 30, 1989 (inclusive).

Students who have spent at least five months in district schools or out-of-district placements during year 1, 2, 3, or 4 of high school are included in the district total cohort unless they transferred to another diploma-granting program outside the district. For the 2005 Total Cohort, Year 1, 2, 3, and 4 are the 2005-06, 2006-07, 2007-08, and 2008-09 school years, respectively.

A student will be included in the district total cohort if the student’s enrollment record in the district shows that the student was enrolled for:
- at least five continuous (not including July and August) months and the **Reason for Ending Enrollment** in the district was not one of the following: transferred to a school in another district, a nonpublic school, or a school outside New York; died; transferred by court order; or left the US; or
- less than five months and has an ending reason indicating that the student dropped out or transferred to an approved Alternative High School Equivalency Preparation Program (AHSEPP) or High School Equivalency Preparation Program (HSEPP) program and the student’s previous enrollment record in that district (assuming one exists) indicates that the student:
  a) was enrolled in the district for at least five months (not including July and August); and
  b) dropped out or transferred to an AHSEPP or HSEPP program.

The **numerator** for the computation of the rate of dropping out is the number of total cohort students with disabilities who drop out as of August after four years of first entering 9th grade or for ungraded students with disabilities, after four years of becoming 17 years of age.

**Definition of Drop Out:**

Information pertaining to the rules for reporting dropout data can be found throughout the Student Information Repository System (SIRS) Manual at:
The definition of “dropout” may be found on page 3 of AcronymsDefinitions20111109.doc:

“A dropout is any student, regardless of age, who left school prior to graduation for any reason except death or leaving the country and has not been documented to have entered another program leading to a high school diploma or an approved program leading to a high school equivalency diploma. The NYSED reports an annual and cohort dropout rate. A student who leaves during the school year without documentation of a transfer to another program leading to a high school diploma or to an approved high school equivalency program or to a high school equivalency preparation program is counted as a dropout unless the student resumes school attendance before the end of the school year. The student’s registration for the next school year does not exempt him or her from dropout status in the current school year. Students who resume and continue enrollment until graduation are not counted as dropouts in the cohort dropout calculation. In computing annual dropout rates, students who are reported as having been counted by the same school as a dropout in a previous school year are not counted as a dropout in the current school year.”

For further information about cohorts used in the past, see SPP Indicator 1 for the definitions of Graduation-Rate Cohort and School and District Accountability Cohort, and the history of changing the definition of Graduation-Rate Cohort in 2006-07.

Overview of Issue/Description of System or Process

NYS Education Law section 3202 does not permit any student over the compulsory attendance age in his or her school district to be dropped from enrollment unless he or she has been absent 20 consecutive school days and the following procedure is complied with: The principal or superintendent must schedule and notify, in writing and at the last known address, both the student and the person in parental relationship to the student of an informal conference. At the conference the principal or superintendent must determine both the reasons for the student’s absence and whether reasonable changes in the student’s educational program would encourage and facilitate his or her re-entry or continuance of study. The student and the person in parental relationship must be informed orally and in writing of the student’s right to re-enroll at any time in the public school maintained in the school district where he or she resides. If the student and the person in parental relationship fail, after reasonable notice, to attend the informal conference, the student may be dropped from enrollment provided that he or she and the person in parental relationship are notified in writing of the right to re-enter at any time. No student may be dropped from enrollment in NYS prior to the end of the school year in which the student turns age 16.

Baseline Data for FFY 2004 (2004-05)

The drop-out rate of students with disabilities in the 2001 total cohort as of June 30, 2004 was 25.5 percent. The drop-out rate for all students in the same cohort was 15.4 percent.
Discussion of Baseline Data

As the data provided in the table below indicate, the drop-out rate of students with disabilities in the 2001 total cohort (25.5 percent) was higher than the drop-out rate of the 2000 total cohort of students with disabilities (13.0 percent). Also, the drop-out rate of students with disabilities in the 2001 total cohort (25.5 percent) is 10.1 percentage points or 66 percent higher than the drop-out rate for all students (15.4 percent).

<td>2001</td>
<td>212,135</td>
<td>15.4%</td>
</tr>
</tbody>
</table>

We have adjusted our baseline data and targets for this indicator based on data for the 2000 and 2001 total cohorts. However, since the Department has revised its 2001 total cohort data as reflected above, it may consider revising its targets for this indicator in a subsequent year, once we have more longitudinal data.

**Note:** In FFY 2008, the language in this target chart was adjusted to be consistent with March 2009 federal requirements for the lag in reporting year for this indicator using ESEA definitions and timelines.

***In FFY 2009, USED requested states to add two additional years to the SPP, including adding two additional years of targets.

The targets to reduce the drop out rate in this State are determined to be rigorous in relation to the increasing standards established in this State for students to meet the graduation requirements. The targets in the years 2005-07 reflect improvement because of the State’s expectation that the data will include many more students with disabilities who were previously not accounted for in the State’s graduation cohort. The projected improvement beginning in 2008 corresponds to the State’s implementation of identified improvement activities, and in particular, the projected increase in the numbers of career and technical education programs developed to address the needs of students with disabilities.

**Improvement Activities/Timelines/Resources**

The improvement activities identified below are designed to address high risk factors associated with dropouts, including attendance, behavior and academic achievement.
Beginning in 2006-07:

School districts with drop-out rates for students with disabilities of at least 20 percent but less than 33 percent were identified as districts “in need of assistance.”

School districts with drop-out rates of 33 percent or higher were identified as “districts in need of intervention.”

Each school district, as a result of this designation, was required to engage in one or more of the following activities to improve its graduation rates:

- Conduct a focused review
- Work with one of the State’s funded technical assistance networks
- Use a portion of its IDEA Part B funds to address the area of concern
- Redirect its fiscal or human resources
- Conduct a self-review of its policies, procedures and practices
- Develop improvement plans

Overview of The State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

Monitoring Priority: FAPE in the LRE

Indicator 3*: Participation and performance of children with individualized education programs (IEPs) on statewide assessments:

A. Percent of the districts with a disability subgroup that meets the State’s minimum “n” size that meet the State’s adequate yearly progress (AYP) targets for the disability subgroup.
B. Participation rate for children with IEPs.
C. Proficiency rate for children with IEPs against grade level, modified and alternate academic achievement standards.

(20 U.S.C. 1416 (a)(3)(A))

*Note: The definition of Indicator 3, the Measurement and Target sections were revised in 1/10 per federal guidance issued 3/09.

Measurement: (Revised January 2010)

A. AYP percent = [(# of districts with a disability subgroup that meets the State’s minimum “n” size that meets the State’s AYP targets for the disability subgroup) divided by the (total # of districts that have a disability subgroup that meets the State’s minimum “n” size)] times 100.

B. Participation rate percent = [(# of children with IEPs participating in the assessment) divided by the (total # of children with IEPs enrolled during the testing window, calculated separately for reading and math)]. The participation rate is based on all children with IEPs, including both children with IEPs enrolled for a full academic year and those not enrolled for a full academic year.

C. Proficiency rate percent = [(# of children with IEPs enrolled for a full academic year scoring at or above proficient) divided by the (total # of children with IEPs enrolled for a full academic year, calculated separately for reading and math)].

Notes:

• NYS public reports of assessment results are available at https://reportcards.nysed.gov/.
• NYS administers alternate assessments against alternate achievement standards aligned to grade level content.
• NYS does not administer assessments against modified achievement standards.
Overview of Issue/Description of System or Process

NYS’ accountability system for all students that is approved by the United States Education Department (USED) under ESEA is characterized as follows:

- The accountability system applies to all public school districts (including Special Act School Districts) and public schools (including charter schools) and includes all students educated in these institutions or students placed in out-of-district placements by school districts.

- Schools must make AYP in English language arts (ELA) and mathematics at the elementary, middle and secondary levels; in science at the elementary and middle levels; and in graduation rate at the secondary level.

- Districts and schools are responsible for AYP of students in the following accountability groups, assuming sufficient enrollment in the group:
  - all students,
  - students with disabilities,
  - limited English proficient students,
  - economically disadvantaged students,
  - American Indian students,
  - Asian students,
  - Black students,
  - Hispanic students, and
  - White students.

- The failure of one group to make AYP in ELA or mathematics means that the district or school does not make AYP in that subject.

- Districts and schools must meet two requirements to make AYP in ELA and mathematics:
  - the school district must test 95 percent of students in each accountability group with 40 or more students; and
the performance of each group with 30 or more continuously enrolled students must meet or exceed its Effective Annual Measurable Objective (Effective AMO) or the group must make "safe harbor."

- To make AYP in science, only the “all students” group is required to meet the performance requirement; there is no participation requirement.

- To make AYP on graduation rate, the “all students” group must achieve a graduation rate of at least 55 percent or improve by one percentage point over its previous year’s performance.

- Assessment performance is defined at four levels:
  - Level 1 = Basic
  - Level 2 = Basic Proficiency
  - Level 3 = Proficient
  - Level 4 = Advanced Proficiency

- A Performance Index (PI) is a value from 0 to 200 that is assigned to an accountability group, indicating how that group performed on a required State test (or approved alternative) in ELA, mathematics, or science. PIs are determined using the following equations:
  - For elementary and middle level assessments, the PI = \[\left(\frac{(\text{number of continuously enrolled tested students scoring at Levels 2, 3, and 4} + \text{the number scoring at Levels 3 and 4})}{\text{number of continuously enrolled tested students}}\right) \times 100\].
  - Beginning with assessments administered during the 2005-06 school year, NYS has a single PI for grades 3-8 in English and another in math.
  - For high school assessments, the PI = \[\left(\frac{(\text{number of accountability cohort members scoring at Levels 2, 3, and 4} + \text{the number scoring at Levels 3 and 4})}{\text{number of accountability cohort members}}\right) \times 100\].

- The State has established Annual Measurable Objectives (AMOs) for ELA and mathematics at each grade level. The AMOs increase annually, until reaching the goal of 100 percent student proficiency in 2013–14. In 2005-06, the AMOs were revised to reflect performance in the combined grades 3-8 ELA and math.

- Recognizing that the annual performance data for relatively small groups of students are not statistically reliable, the State has established Effective AMOs based on the number of students in a measured group. The Effective AMO is the lowest PI that an accountability group of a given size can achieve in a subject for the group’s PI not to be considered significantly different from the AMO. If an accountability group achieves its Effective AMO, it is considered to have made AYP, as long as the participation requirement, if applicable, has been met.

- The State has established standards on the third indicators, elementary- and middle-level science and high school graduation rate, that districts and schools must meet to make AYP.
• An accountability group whose performance in ELA and mathematics does not equal or exceed its Effective AMO in a subject can make “safe harbor” if its performance improves by a specified amount over its previous year’s performance and if its performance on the third indicator equals or exceeds the State standard or improves by 1.0 percentage point on graduation rate and one point on science over the previous year.

The following table identifies the State’s AMOs through the 2004-05 school year:

<table>
<thead>
<tr>

The following sources provide additional detailed information about NYS’ Accountability system for all students, including students with disabilities, which is approved under ESEA (updated January 2010).

• Federal web site for State Accountability Workbooks, including NYS’ [http://www2.ed.gov/admins/lead/account/stateplans03/index.html](http://www2.ed.gov/admins/lead/account/stateplans03/index.html)

**Baseline Data for FFY 2004 (School Year 2004-05)**

**AYP Measure**

In **2004-05**, 48.3 percent of 290 school districts that were required to make AYP made AYP for the subgroup of students with disabilities in all the subjects in which they were required to. NYS has established a minimum enrollment of 40 students for participation and 30 for performance.
- 69.9 percent of 216 school districts that were required to make AYP in grade 4 ELA made AYP.
- 93.4 percent of 213 school districts that were required to make AYP in grade 4 math made AYP.
- 68.6 percent of 258 school districts that were required to make AYP in grade 8 ELA made AYP.
- 63.4 percent of 254 school districts that were required to make AYP in grade 8 math made AYP.
- 48.7 percent of 189 school districts that were required to make AYP in high school ELA made AYP.
- 52.4 percent of 189 school districts that were required to make AYP in high school math made AYP.

Participation Rate in State Assessments

As shown in the table below, in the 2004-05 school year, the participation rates of students with disabilities in State assessments were 95 percent or higher in elementary and middle school ELA and math assessments. However, at the high school level, 89 percent of the seniors with disabilities participated in a high school English assessment and 90 percent in a high school mathematics assessment.

* The data in the above table are from USDOE Table 6 containing 2004-05 school year data. NYS will provide disaggregated data for students with disabilities who took the regular assessment with and without testing accommodations when SIRS includes all State assessment data.
Proficiency Rate

As shown in the table below, in 2004-05, the students with disabilities accountability group achieved the effective AMO score on the grade 4 mathematics assessment, but did not achieve a PI score sufficient to make safe harbor for any of the other grade 4, grade 8 or secondary level State assessments.

Discussion of Baseline Data

Adequate Yearly Progress:

- In 2004-05, 48.3 percent of 290 school districts made AYP for the students with disabilities subgroup in all the subjects in which they were required to. This is significant improvement compared to 25.1 percent of 299 school districts in 2003-04. NYS has established a minimum enrollment of 40 students for participation and 30 for performance.

- The majority of school districts were not required to make AYP for the students with disabilities accountability subgroup because they did not have a minimum enrollment of 30 students with disabilities. In 2004-05:
  - 69.9 percent of 216 school districts made AYP in grade 4 ELA;
  - 93.4 percent of 213 school districts made AYP in grade 4 math;
  - 68.6 percent of 258 school districts made AYP in grade 8 ELA;
  - 63.4 percent of 254 school districts made AYP in grade 8 math;
Part B State Performance Plan (SPP) for 2005-2012

Revised August 2012

- 48.7 percent of 189 school districts made AYP in high school ELA; and
- 52.4 percent of 189 school districts made AYP in high school math.

- Beginning in the 2005-06 school year, many more school districts will be required to make AYP for the students with disabilities subgroup since they will have the minimum numbers of students with disabilities enrolled in grades 3-8 combined. NYS will have AYP calculations in grades 3-8 combined for ELA, grades 3-8 combined for math, high school ELA and in high school math.

Participation:

- As shown in the table above under the participation heading, in the 2004-05 school year, the participation rates of students with disabilities in State assessments were 95 percent or higher in elementary and middle school ELA and math assessments. However, at the high school level, 89 percent of the seniors with disabilities participated in a high school English assessment and 90 percent in a high school mathematics assessment. The participation rates in 2004-05 were better compared to rates in the 2003-04 school year.

Proficiency:

- As shown in the table above under the proficiency heading, the students with disabilities accountability group achieved a Performance Index of:
  - 102 on the Grade 4 ELA examination, five points short of the required safe-harbor target of 107 and twenty-eight points short of the 2004-05 effective AMO for all students of 130.
  - 141 on the Grade 4 mathematics examination, which was the effective AMO in 2004-05 for all students.
  - 85 on the Grade 8 ELA examination, seven points short of the required safe-harbor target of 92 and thirty points short of the 2004-05 effective AMO for all students of 115.
  - 82 on the Grade 8 mathematics examination, nine points short of the required safe-harbor target of 91 and ten points short of the 2004-05 effective AMO for all students of 92.
  - 104 on the high school English examination, five points short of the required safe-harbor target of 109 and 43 points short of 2004-05 effective AMO for all students of 147.
  - 108 on the high school mathematics examination, one point above the required safe-harbor target of 107 and 30 points short of 2004-05 effective AMO for all students of 138. The group did not make AYP because the group did not meet the third indicator for safe harbor, which is a graduation rate of at least 55 percent or a one-percentage point increase in the graduation rate compared to the previous year.

* NYS is not able to provide data disaggregated for students with disabilities who received testing accommodations and those who did not. We expect to be able to report this disaggregated data once SIRS includes all State assessment data.
NYS will implement State testing in ELA and mathematics in grades 3-8 during the 2005-06 school year. The State plans to develop two new State PI to replace the four indices that currently exist for elementary and middle level assessments; one new index is planned for grades 3-8 ELA and the other for grades 3-8 mathematics. Creation of the two new indices will require the State to establish new AMOs and safe-harbor targets for school buildings and school districts.

**Measurable and Rigorous Targets**

The targets established for the three measures relating to the participation and performance of students with disabilities on statewide assessments use the same data that are used for accountability as described in the State’s approved plan under NCLB.

<table>
<thead>
<tr>
<th>School Year</th>
<th>Measurable and Rigorous Target</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005 (2005-06)</td>
<td>AYP: 55.9 percent of school districts that are required to make AYP for the students with disabilities subgroup will make AYP in grades 3-8 ELA, grades 3-8 math, high school ELA and high school math. Participation: 95 percent in grades 3-8 and high school in ELA and math. Performance: The State’s average performance on the performance indices (PI) which represent the percent of students with disabilities performing at Level 2 (basic proficiency) and above plus the percent of students with disabilities performing at Level 3 (proficiency) and above will be as follows: Grades 3-8 ELA: 91 Grades 3-8 Math: 100 High School ELA: 114 High School Math: 124</td>
</tr>
<tr>
<td>2006 (2006-07)</td>
<td>AYP: 57 percent of school districts that are required to make AYP for the students with disabilities subgroup will make AYP in grades 3-8 ELA, grades 3-8 math, high school ELA and high school math. Participation: 95 percent in grades 3-8 and high school in ELA and math. Performance: The State’s average performance on the performance indices (PI) which represent the percent of students with disabilities performing at Level 2 (basic proficiency) and above plus the percent of students with disabilities performing at Level 3 (proficiency) and above will be as follows: Grades 3-8 ELA: 96 Grades 3-8 Math: 105 High School ELA: 119 High School Math: 129</td>

*** Note: Extended the end dates to 2012 coinciding with extended dates of the SPP (rev. 2/11).

Overview of the State Performance Plan Development

See [Overview of the State Performance Plan (SPP) Development](#) preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012, and to establish the baseline for Indicator 4B. The State’s technical assistance and support networks were also involved in these discussions.

**Monitoring Priority: FAPE in the LRE**

**Indicator 4:** Rates of suspension and expulsion:

A. Percent of districts that have a significant discrepancy in the rate of suspensions and expulsions of greater than 10 days in a school year for children with individualized education programs (IEPs); and

B. Percent of districts that have (a) a significant discrepancy, by race or ethnicity, in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs; and (b) policies, procedures or practices that contribute to the significant discrepancy and do not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards.

(20 U.S.C. 1416(a)(3)(A); 1412(a)(22))

**Measurement 4A:**

A. Percent = \[
\frac{\text{(# of districts that have a significant discrepancy in the rates of suspensions and expulsions for greater than 10 days in a school year of children with IEPs)}}{\text{(# of districts in the State)}}\] \times 100.

**NYS’ Definition of Significant Discrepancy and Methodology:**

In NYS, the rates of suspensions and expulsions of students with disabilities out of school for more than 10 days in a school year are compared among the school districts in the State.

For the baseline year 2004-05 through 2006-07, significant discrepancy was defined as a suspension rate of greater than three times the baseline statewide average (i.e., a rate of 4.0 percent or higher).

Beginning in 2007-08 through 2010-11, significant discrepancy is defined as a suspension rate of greater than two times the baseline statewide average, (i.e., a rate of more than 2.7 percent or higher).

The 2004-05 baseline statewide average suspension rate was 1.34 percent. School districts with at least 75 school-age students with disabilities that had a suspension
Part B State Performance Plan (SPP) for 2005-2012

New York State
Revised August 2012

rate of 4.0 percent or higher were identified as having significant discrepancy in their rate among school districts. A minimum number of 75 students with disabilities was used since small numbers of students with disabilities may distort percentages.

The State uses a minimum of 75 students with disabilities “n” size requirement in its formula to compute significant discrepancy. However, it does not exclude school districts from the denominator when calculating results for this indicator.

Data Source:

NYS collects data on the number of students with disabilities suspended or expelled out of school for more than 10 days in a school year on the PD-8 report. See http://www.p12.nysed.gov/sedcar/forms/pdf/forms/1112/pdf/pd8_1112.pdf. Data for this report are collected through the PD Data System, which is a web-based application used by school districts to provide aggregate data. The State verifies the reliability and accuracy of the State’s data through automated edit checks and verification procedures.

Section 618 data are used to analyze for discrepancy in the rates of out-of-school suspensions of students with disabilities for greater than 10 days in a school year among school districts. Suspension rates were calculated for all school districts. From 2004-05 through 2007-08, the rates were computed by dividing the number of students with disabilities suspended out of school for more than 10 days, by the December 1 count of school-age students with disabilities and the result expressed as a percent. From 2008-09 onward, the date for determining the count for school-age students changed from December 1 to the first Wednesday in October.

For Indicator 4A, NYS uses data collected for Table 5 of Information Collection 1820-0621 (Report of Children with Disabilities Unilaterally Removed or Suspended/Expelled for More than 10 Days) and reported to the United States Education Department (USED) annually in the 618 report. These data are also provided to USED in the corresponding EDFacts files.

Overview of Issue/Description of System or Process

Section 3214 of NYS Education Law establishes the requirements for the suspension of all students. Section 3214.6 establishes the requirements for the suspension of students with disabilities. Information on the NYS requirements relating to suspensions may be accessed at: http://www.p12.nysed.gov/specialed/publications/policy/discipcover.htm (The guidance document will be revised to reflect the IDEA 2004 requirements).

Procedures that apply to all students: If a student violates the school code of conduct and is being considered for a suspension or removal, school personnel must ensure the following due process protections are provided to the student and to the student’s parent(s).

42
• For suspensions of five school days or less, the student's parent(s) or guardian must be provided with a written notice (section 3214 notice), and a follow-up telephone call if possible, within 24 hours of the incident leading to the suspension which describes the basis for the suspension and explains that the parent or guardian has a right to request an informal conference with the principal prior to the proposed suspension to discuss the incident and question any complaining witness(es) against the student.

• For suspensions in excess of five consecutive school days, the student's parent(s) or guardian must be provided with a written notice which indicates that the district proposes to suspend the student from school in excess of five consecutive school days, describes the basis for the proposed suspension, explains that the student has an opportunity for a fair hearing conducted by either the superintendent or hearing officer designated by the superintendent at which the student will have a right to question any witnesses accusing him/her of committing the misconduct charged and to present witnesses on his/her own behalf. Where possible, notification must also be provided by telephone.

• For any student of compulsory school age, the school must provide alternative education to the student during the suspension.

In addition to the above requirements that apply to all students, the requirements, procedures and protections in federal law and regulations pertaining to students with disabilities are established section 3212 of the Education Law and Part 201 of the Commissioner's Regulations. These requirements may be found at: http://www.p12.nysed.gov/specialed/lawsregs/201-Oct2008-809.pdf

4A Baseline Data for FFY 2004 (2004-05)

As shown in the table below, of the 684 school districts in the State, 20 school districts or 2.9 percent had suspension rates greater than or equal to three times the baseline statewide average rate of 1.34 percent. These districts had a rate of 4.0 percent or higher and were identified as having significant discrepancy in their rate among all the LEAs.

Discussion of 4A Baseline Data

NYS computes a suspension rate for students with disabilities suspended out-of school for more than 10 days for all school districts. The table below provides information on the number of school districts and their rates as well as the percentage of all out-of-school suspensions of more than 10 days in these school districts. In addition to the 20 school districts with a suspension rate of 4.0 percent or higher, another 30 school districts had a suspension rate that was between two but less than three times the baseline average and 110 school districts had a rate above the baseline average but below two times the baseline average. The majority of school districts (64.3 percent)
had a rate that was below the baseline average. Eighty-four (84) school districts had an enrollment that was considered too small to yield a valid rate.

The focus of the State’s efforts on this indicator will be to target school districts with the highest suspension rates during the course of this SPP cycle. As the table below indicates, there are 50 school districts in the baseline year that have a suspension rate that is two times or higher than the baseline average. Almost 40 percent of all suspensions occurred in these school districts in the baseline year.

*In FFY 2009, USED requested states to add two additional years to the SPP, including adding two additional years of targets.

### 4B: Significant Discrepancies by Race/Ethnicity in High Suspension Rates

A new baseline for Measurement 4B is reported in this SPP, submitted February 1, 2011, with Annual Performance Reports (APRs) resuming thereafter.

#### Measurement 4B (Revised for reporting new baseline data for FFY 2009):

B. Percent = \( \frac{\text{(# of districts that have: (a) a significant discrepancy, by race or ethnicity, in the rate of suspensions and expulsions of greater than 10 days in a school year for children with IEPs; and (b) policies, procedures or practices that contribute to the significant discrepancy and do not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards) divided by the (# of districts in the State)] times 100.} \)

#### Definition of significant discrepancy:

Baseline year through FFY 2009:

NYS compared the number of students suspended of each race/ethnicity category with the number suspended of all other race/ethnicity categories combined and computed relative risk ratios and weighted relative risk ratios to determine if there was significant discrepancy in suspensions. In subsequent years, the State may revise the definition by lowering the relative risk ratio, weighted relative risk ratio, as well as the minimum numbers of suspensions:

- At least 75 students with disabilities enrolled on 10/1/09;
- At least 10 students with disabilities of the particular race/ethnicity were suspended;
- At least 20 students with disabilities of all other race/ethnicities were enrolled; and
- Either:
Both the relative risk ratio and weighted relative risk ratio for any minority group was 2.0 or higher; or
All students with disabilities suspended were from only one minority group regardless of the size of the relative risk ratio and weighted relative risk ratio.

Beginning with FFY 2010 APR Reporting

NYS compares the number of students suspended in each race/ethnicity category with the statewide number suspended of all students with disabilities and computes a standard deviation to determine if there is significant discrepancy in suspensions. The State uses the following definition of “significant discrepancy”:

- At least 75 students with disabilities enrolled on 10/1;
- At least 10 students with disabilities of the particular race/ethnicity were suspended;
- The suspension rate of the particular race/ethnicity was greater than two standard deviations above the mean.

For school district calculations, the minimum numbers of students with disabilities is used because of the potential for small numbers of students with disabilities to distort percentages. NYS includes the total number of LEAs in the State in the denominator. The Statewide calculation, does not exclude school districts from the denominator calculation as a result of this minimum “n” size.

Beginning with the school year 2009-10 data, reports include significant discrepancies of children in the “two or more races” category for Indicator 4B.

For each school district identified by its data as having a significant discrepancy in the rate of suspensions and expulsions of greater than 10 days in a school year of students with disabilities, the State ensures that a review is conducted of the district’s policies, procedures and practices relating to the development and implementation of IEPs, the uses of positive behavioral interventions and supports, and procedural safeguards among students with disabilities subject to discipline. The State provides for the review of policies, procedures and practices each year a school district’s data shows a significant discrepancy in its suspension rates for students with disabilities as follows:

- The first year a district’s data indicates a significant discrepancy, the State requires the district to complete a State-developed self-review monitoring protocol, which requires the review of specific policies, practices and procedures related to discipline of students with disabilities, including requirements relating to the development and implementation of IEPs, use of positive behavioral interventions and supports and procedural safeguards. The monitoring protocol for this review is available at http://www.p12.nysed.gov/specialed/spp/indicators/4.htm. A report of the results of this review is submitted by the district to the State. At the time of submission, school districts that identify issues of noncompliance are immediately notified that they must correct all issues of noncompliance as soon as possible, but not later than 12 months. The results from this review are reported to the State for follow-up and corrective actions if compliance issues are identified. Districts that are identified with inappropriate policies, procedures and/or practices are identified for purposes of
Part B State Performance Plan (SPP) for 2005-2012

New York State

Revised August 2012

reporting in the APR for indicator 4B.

- For subsequent years in which a school district’s data indicates significant discrepancies, the State conducts the monitoring review of the district’s policies, procedures and practices in the areas as identified above.

Data Source:

For 4B, NYS uses data collected for Table 5 of Information Collection 1820-0621 (Report of Children with Disabilities Unilaterally Removed or Suspended/Expelled for More than 10 Days) and reported in the annual 618 report to USED. For 4B, NYS also includes data from reviews of policies, practices and procedures as defined in the above Measurement for this indicator.

Overview of Issue/Description of System or Process

IDEA requires States to collect and examine data to determine if significant discrepancies based on race and ethnicities are occurring in the State and the LEAs of the State with respect to the incidence, duration, and type of disciplinary actions, including suspensions and expulsions that are the result of inappropriate policies, procedures and practices. In the case of a determination of significant discrepancy, the State provides for the review and if appropriate revision of the school district’s discipline policies, procedures, and practices to comply with the requirements of federal and State law and regulations.

Plan to Collect the Baseline Data for 4B:

By February of 2006, NYS analyzed data and sent notifications to school districts whose data indicate "significant discrepancy" based on the above definition, providing them with a State developed "self-review monitoring protocol."

By May of 2006, these school districts were required to submit their completed self-review monitoring protocols of relevant school district policies, practices and procedures to the Department. Based on this self-review, if a school district determines that one or more of its policies, procedures and/or practices require revision, it must revise them and provide corrective action documentation to the Department. If a school district determines its policies, procedures and/or practices are appropriate and do not require revision, the Department arranged for verification of this determination.

If the State determines that the school district's policies, procedures and practices are in compliance with federal and State requirements, the school district may not be required to complete another review of its policies, procedures or practices during the remaining period of the SPP. Furthermore, if school district’s data do not improve, the State may conduct another review of school district’s policies, practices and procedures.
School districts that are found to have inappropriate policies, procedures and/or practices through the self-reviews or Department verification reviews will be reported in the baseline data for the 2005-06 school year.

Baseline Data for FFY 2005 (2005-06) for Indicator 4B

1.5 percent (10 school districts) of all school districts in the State (684) were identified as having a significant discrepancy by race and ethnicity that is the result of inappropriate policies, procedures and practices.

The manifestation review is conducted immediately, but not later than 10 days after the decision to remove or suspend the student.

A team that includes the student’s parent, an individual knowledgeable about the student and the interpretation of behavior and other relevant members of the CSE as determined by the parent and the school district conducts the manifestation review. Parents are notified in writing of the meeting.

All relevant information in the student’s file, including the student's IEP, any teacher observations and relevant information provided by the parent is reviewed.

The manifestation determination is made based on whether the conduct was caused by or had a direct and substantial relationship to the student's disability or was a direct result of the school district’s failure to implement the IEP.

If the conduct was determined to be related to the student’s disability, the student is returned to the placement from which the student was removed (except drugs, weapons or serious bodily injury removals).

The parent is notified and provided a copy of the procedural safeguards notice within 10 days of the decision to suspend the student for more than 10 days.

Suspensions of students with disabilities do not exceed the amount of time that a nondisabled student would be subject to suspension for the same behavior.

A manifestation determination has been made prior to the removal for more than 10 school days. If the

**Explanation of 2005-06 Baseline Data for Indicator 4B**

During the 2005-06 school year, 10 school districts were identified by the State as having significant discrepancy based on race/ethnicity in the percent of students with disabilities suspended out-of-school for more than 10 days based on their 2004-05 school year data. These school districts were sent notifications with directions to use a State developed self-review monitoring protocol to review their policies, practices and procedures.

All identified school districts reviewed their policies, practices and procedures related to discipline for students with disabilities during the 2005-06 school year and reported results through a State developed web-based data submission system. All 10 school districts reported being out of compliance with at least one citation related to discipline procedures for students with disabilities. These school districts have been notified that they must correct their policies, practices and procedures within one year from being notified of noncompliance. As soon as possible, but no later than one year from
notification, they will be required to resubmit compliance information to the State along with a written assurance that they are in compliance with all citations.

As shown above, at least half of the school districts reported not being in compliance with the following eight citations:

- §200.4(d)(3) - For students whose behaviors impede their learning or that of others, the IEPs include positive behavioral interventions and supports and other strategies to address the behaviors.
- §200.3(d)(1) - The general education teacher participated in the CSE meeting to identify appropriate positive behavioral interventions and strategies for the student.
- §201.4(e) - The IEP was revised as a result of any deficiencies noted during a manifestation determination review.
- §200.4(e) - Behavioral intervention plans are implemented, monitored and progress documented.
- §201.4(a) - The manifestation review is conducted immediately, but not later than 10 days after the decision to remove or suspend the student.
- §201.4(b) - A team that includes the student’s parent, an individual knowledgeable about the student and the interpretation of behavior and other relevant members of the CSE as determined by the parent and the school district conducts the manifestation review. Parents are notified in writing of the meeting.
- §201.7(d) - Short-term suspensions are reviewed to determine if they constitute a pattern of removals.
- §201.10(c) and (d) - During suspensions of more than 10 days in a school year, regardless of the manifestation determination, students with disabilities receive services to enable them to participate in the general curriculum and to continue to progress toward IEP goals.

The Statewide results of compliance with regulatory citations provided above were disaggregated by the State’s Special Education Quality Assurance (SEQA) regions and other technical assistance network regions so that the regional staff may provide the required technical assistance to school districts based on the regional profile of results on the self-review monitoring protocol.

New Baseline Data for Indicator 4B Established for FFY 2009 (2009-10)

Federal changes in SPP reporting requirements for Indicator 4B resulted in suspending reporting for Indicator 4B from FFY 2006 through FFY 2008. Reporting is being resumed as of FFY 2009, requiring setting a new baseline. 2009-10 school year data are the State’s new baseline data; they cannot be compared to prior year’s data.

2.2 percent (15 school districts) of all school districts in the State (682) were identified as having a significant discrepancy by race and ethnicity and policies, procedures and practices that contributed to the significant discrepancy and did not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards. NYS evaluated suspension data from 574 school districts with a minimum enrollment of 75
students with disabilities (enrollment as of October 1, 2008) to determine if significant discrepancies were occurring in the rates of suspension by race/ethnicity.

Discussion of Indicator 4B FFY 2009 Baseline Data

During the 2009-10 school year, 17 school districts were identified by the State as having significant discrepancy based on race/ethnicity in the percent of students with disabilities suspended out-of-school for more than 10 days based on their 2008-09 school year data. Seven (7) of these school districts were sent notifications with directions to use a State developed self-review monitoring protocol to review their policies, practices and procedures. Ten (10) school districts received focused or comprehensive reviews by the special education monitoring office to review their policies, procedures and practices because these school districts had two or more consecutive years of data with significant discrepancies.

It was determined that 15 of the 17 school districts or 2.2 percent of all school districts in the State had one or more policies, procedures or practices that contributed to the significant discrepancy and did not comply with requirements relating to the development and implementation of IEPs, the use of positive behavioral interventions and supports, and procedural safeguards. These school districts have been notified that they must correct their policies, practices and procedures within one year from being notified of noncompliance.

The State will report on the correction of noncompliance on findings related to this indicator in a subsequent year’s APR.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

**Monitoring Priority: FAPE in the LRE**

**Indicator 5**: Percent of children with individualized education programs (IEPs) aged 6 through 21 served:

A. Inside the regular class 80% or more of the day;
B. Inside the regular class less than 40% of the day; and
C. In separate schools, residential facilities, or homebound/hospital placements.

(20 U.S.C. 1416(a)(3)(A))

*Note: As of 1/10, this indicator is reworded per federal guidance issued 3/09. Categories have the same content, but are expressed more positively as “inside” instead of “removed from.”*

**Measurement:**

A. Percent = \[\frac{\text{(# of children with IEPs served inside the regular class 80% or more of the day)}}{\text{(total # of students aged 6 through 21 with IEPs)}}\] times 100.
B. Percent = \[\frac{\text{(# of children with IEPs served inside the regular class less than 40% of the day)}}{\text{(total # of students aged 6 through 21 with IEPs)}}\] times 100.
C. Percent = \[\frac{\text{(# of children with IEPs served in separate schools, residential facilities, or homebound/hospital placements)}}{\text{(total # of students aged 6 through 21 with IEPs)}}\] times 100.

**Data Source:**

Student Information Repository System (SIRS), used to collect individual student data on all students.

NYS will use data collected for Table 3 of Information Collection 1820-0517 (Part B, Individuals with Disabilities Education Act Implementation of FAPE Requirements) and reported annually in the 618 report to the United States Education Department (USED). These data are also provided to USED in the corresponding EDFacts files.

**Overview of Issue/Description of System or Process**

Section 200.4 of the Commissioner’s Regulations sets forth the requirements for placement of students with disabilities in the least restrictive environment.
NYS Education law and regulations also establish procedures for students with disabilities determined to be at future risk for residential placement: These procedures require, where a student is determined to be at risk of a future placement in a residential school, that the committee on special education (CSE) request in writing that a designee of the appropriate county or State agency participate in any proceeding of the CSE to make recommendations concerning the appropriateness of residential placement and other programs and placement alternatives, including but not limited to, community support services that may be available to the family. The CSE must notify the local social services district when a student who is in a foster care placement is at risk of a future placement in a residential school.

Section 200.2(g) of the Commissioner’s Regulations establishes the procedures for development and submission of “Special Education Space Requirements Plans.” The purpose of the plan is to determine the need for additional facilities space for all special education programs in the geographic area served by the BOCES, including programs provided by the public school districts, approved private schools for students with disabilities and State-supported schools which are located within the geographic boundaries of the BOCES supervisory district. The plan must ensure that students with disabilities are educated in age appropriate settings and to the maximum extent appropriate with students who are not disabled. The annual progress report must provide the actual and projected numbers and projected percentages of students with disabilities in settings with nondisabled peers in the region. The Department publishes annual data on the progress regions are making to improve their rates of placements of students with disabilities in integrated settings.

Section 200.7 of the Commissioner’s Regulations relating to the approval of new or expanded private schools to serve students with disabilities requires documentation of regional need and sufficient evidence to establish that the proposed program will serve only those students who, because of the nature or severity of their disability, would require a separate facility.

**Baseline Data for FFY 2004 (2004-05)**

A. 53.6 percent of students with disabilities, ages 6-21, removed from regular class less than 21 percent of the day (i.e., in general education programs for 80 percent or more of the school day).

B. 27.3 percent of students with disabilities, ages 6-21, were removed from regular class greater than 60 percent of the day (i.e., in general education programs for less than 40 percent of the school day).

C. Seven (7.0) percent of students with disabilities, ages 6-21, were served in public or private separate schools, residential placements, or homebound or hospital placements.
Discussion of Baseline Data

- Disaggregation of the data indicates that, compared with the rest of the State, the Big Five Cities where the special education population is the highest and resources are the lowest, place almost twice as many of their students with disabilities in programs in which they are removed from general education classes for more than 60 percent of the day or are in separate educational settings.
- Trend data shows that the rate of students with IEPs who participate daily in general education programs for 40 percent or more of the day has increased steadily from 1997-98 to 2003-04 (56.1 percent to 65.7 percent).
- 71 school districts are below the current 65.7 percent statewide average for students participating in general education programs 40 percent or more of the day.

Coordinated Children’s Service Initiative (CCSI)
NYS law established CCSI to maintain children who have complex emotional and behavioral disorders in their homes, schools and communities. A three tier interagency structure assures that services are comprehensive and coordinated; requires parent participation at all levels of the system and provides for the blending of funds across systems and the flexible use of funds to meet the unique needs of each family.

*Note: Extended the end dates 2012 coinciding with extended dates of the SPP (rev. 2/11).

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

**Monitoring Priority: FAPE in the LRE**

**Indicator 6**: Percent of children aged 3 through 5 with individualized education programs (IEPs) attending a:

A. Regular early childhood program and receiving the majority of special education and related services in the regular early childhood program; and
B. Separate special education class, separate school or residential facility.

(20 U.S.C. 1416(a) (3) (A))

* Note: As of the January 2010 SPP, this indicator is reworded per federal guidance issued 3/09.

**Measurement**: (Revised January 2010 consistent with federal guidance)

A. Percent = [(# of children aged 3 through 5 with IEPs attending a regular early childhood program and receiving the majority of special education and related services in the regular early childhood program) divided by the (total # of children aged 3 through 5 with IEPs)] times 100.

B. Percent = [(# of children aged 3 through 5 with IEPs attending a separate special education class, separate school or residential facility) divided by the (total # of children aged 3 through 5 with IEPs)] times 100.

**Data Source:**

Student Information Repository System (SIRS) is used to collect individual student data on all students. New York State (NYS) will use the data collected and reported annually to the United States Education Department (USED) in the 618 report on Table 3 of Information Collection 1820-0517 (Part B, Individuals with Disabilities Education Act Implementation of FAPE Requirements). These data are also provided to USED in the appropriately formatted EDFacts files.

**Overview of Issue/Description of System or Process**

Section 4410 of the Education Law and section 200.16 of the Commissioner's Regulations establish the process for preschool students with disabilities to receive special education services.

The Committee on Preschool Special Education (CPSE) makes recommendations for placement of preschool students with disabilities. The CPSE is required by law and regulation to first consider the appropriateness of providing related services only; or
special education itinerant teacher services (SEIT) only; or related services in combination with SEIT services; or a half-day preschool program or a full-day preschool program. The CPSE is also required to first consider providing special education services in a setting where age-appropriate peers without disabilities are typically found, prior to recommending the provision of special education services in a setting, which includes only preschool children with disabilities.

The CPSE is required to include in its written report of its recommendation a statement of the reasons why less restrictive placements were not recommended when the recommendation is for the provision of special education services in a setting with no regular contact with age-appropriate peers without disabilities.

In 2004-05, 63.5 percent of preschool children with IEPs received special education and related services in settings with typically developing peers (e.g., early childhood settings, home, and part-time early childhood/part-time early childhood special education settings).

**Discussion of Baseline Data**

- In 2004-05, 465 out of 664 school districts with preschool special education students (70 percent) had rates of integration in preschool placements that exceeded the State average, while 199 school districts were below the statewide average. One hundred forty-eight (148) school districts were at 100 percent integration, including a large city/high need school district.

- Analysis by geographic regions indicates wide differences. New York City and Long Island are below the statewide rate by 11 and 7 percentage points respectively, while Central and Eastern New York State exceed the statewide baseline by 20 and 15 percentage points respectively. Between 2003-04 and 2004-05, New York City increased its integration of special education placements from 41.5 percent to 52.4 percent.

- Data from the longitudinal study of 5,000 preschool students with disabilities indicate a statistical relationship between integration in preschool special education and age appropriate development of learning and behavioral skills in kindergarten. As the students progress through grade four, data will continue to be collected to ascertain long-term effects of preschool integration.

- NYS has made steady growth in the integration of preschool special education over time. In 1995-96, the integration rate was 32.3%. The 2004-05 rate has nearly doubled since that time. In 2003-04, the NYS rate exceeded the national average by 6.7 percentage points. Among the improvement strategies implemented over this time period that led to these improvement results are:
  - A moratorium on the approval of any new or expanded preschool programs in settings that include only preschool children with disabilities.
The addition of SEIT services to the continuum of preschool special education services in 1997.

A grant initiative to promote the development of new or expanded preschool programs in integrated settings.

Initiation in 2001 of the NYS Universal Pre-Kindergarten Program.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development in the Introduction to the SPP originally submitted February 1, 2006 and revised June 2007. The SPP was revised in February 2009 to add progress data. The SPP was revised in January 2010 to add Baseline and set Targets with the input of stakeholder groups.

New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

Monitoring Priority: FAPE in the LRE

Indicator 7: Percent of preschool children aged 3 through 5 with individualized education programs (IEPs) who demonstrate improved:

A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/communication and early literacy); and
C. Use of appropriate behaviors to meet their needs.
(20 U.S.C. 1416 (a)(3)(A))

Measurement:

Outcomes:
A. Positive social-emotional skills (including social relationships);
B. Acquisition and use of knowledge and skills (including early language/communication and early literacy); and
C. Use of appropriate behaviors to meet their needs.

Progress Categories for Outcomes A, B, and C (revised January 2010):

The following definitions of Progress Categories are based on United States Education Department (USED) guidance issued in March 2009 and represent a consolidation of language that was used in previous SPPs and Annual Performance Reports (APRs). There is no change in Progress Categories used for this Indicator.

a. Percent of preschool children who did not improve functioning = [(# of preschool children who did not improve functioning) divided by the (# of preschool children with IEPs assessed)] times 100.

b. Percent of preschool children who improved functioning but not sufficient to move nearer to functioning comparable to same-aged peers = [(# of preschool children who improved functioning but not sufficient to move nearer to functioning comparable to same-aged peers) divided by the (# of preschool children with IEPs assessed)] times 100.
c. Percent of preschool children who improved functioning to a level nearer to same-aged peers but did not reach it = [(# of preschool children who improved functioning to a level nearer to same-aged peers but did not reach it) divided by the (# of preschool children with IEPs assessed)] times 100.

d. Percent of preschool children who improved functioning to reach a level comparable to same-aged peers = [(# of preschool children who improved functioning to reach a level comparable to same-aged peers) divided by the (# of preschool children with IEPs assessed)] times 100.

e. Percent of preschool children who maintained functioning at a level comparable to same-aged peers = [(# of preschool children who maintained functioning at a level comparable to same-aged peers) divided by the (# of preschool children with IEPs assessed)] times 100.

Summary Statements for Each of the Three Outcomes A, B, and C:
The following represents new language provided by USED in March 2009 to help organize the data and set targets in the February 2010 SPP.

Summary Statement 1: Of those preschool children who entered the preschool program below age expectations in each Outcome, the percent who substantially increased their rate of growth by the time they turned 6 years of age or exited the program.

   Measurement for Summary Statement 1: Percent = # of preschool children reported in progress category (c) plus # of preschool children reported in category (d) divided by [# of preschool children reported in progress category (a) plus # of preschool children reported in progress category (b) plus # of preschool children reported in progress category (c) plus # of preschool children reported in progress category (d)] times 100.

Summary Statement 2: The percent of preschool children who were functioning within age expectations in each Outcome by the time they turned 6 years of age or exited the program.

   Measurement for Summary Statement 2: Percent = # of preschool children reported in progress category (d) plus # of preschool children reported in progress category (e) divided by [the total # of preschool children reported in progress categories (a) + (b) + (c) + (d) + (e)] times 100.

Data Source
Beginning with the 2006-07 school year, the PD-10 report was used to collect progress data on preschool outcomes during the 2006-07 school year via a web-based data reporting system. The PD-10 report is posted at http://www.p12.nysed.gov/sedcar/archived/0607pdrpts.htm. Beginning in the 2007-08 school year, these data are collected at the individual student level through the State’s Student Information Repository System (SIRS). The most current SIRS manual is posted at: http://www.p12.nysed.gov/irs/sirs/. The data is based on using the federally developed Child Outcomes Summary Form (COSF).
Overview of Issue/Description of System or Process:

In NYS, preschool children suspected of having a disability are referred to their local school districts through their district's Committee on Preschool Special Education (CPSE). In accordance with State statute, parents maintain the right to select an evaluator from a list of state-approved evaluators. If, based on the evaluation, the CPSE determines that a child is eligible for special education services, an IEP is developed that identifies the recommended special education services for the child. Preschool students with disabilities may receive related services only (RSO), services of a Special Education Itinerant Teacher (SEIT), or be placed in a special class program for either half or full day, including integrated programs with students without disabilities when appropriate. NYS’ system allows for the provision of related services and SEIT within general education preschool and/or daycare environments as well as in the child’s home. In NYS, most preschool children with disabilities receive their special education services from approved private preschool providers.

Identification of assessment measures in preschool outcome areas

At the request of the Office of Vocational and Educational Services for Individuals with Disabilities (VESID), a survey was conducted by the Early Childhood Direction Centers (ECDCs) of the assessment tools currently being used by special education preschool programs in NYS that measure the required indicator areas. The most frequently administered assessments for 3- and 4-year-old children used in the State to assess preschool children with disabilities in the three outcome areas are provided below.

### Process to collect entry and exit information

**Entry assessments:**

All preschool children who were initially evaluated on or after March 1, 2006 and found eligible for preschool special education programs and/or services are required to have entry assessment results. All preschool children suspected of having a disability must have entry assessments. These assessments are conducted by approved preschool evaluators. Results are reported to the CPSE, which determines if the child is eligible for preschool special education programs and services and the entry levels of functioning in three early childhood outcome areas. Approved preschool evaluators are required to include specific assessment information on the Preschool Student Evaluation Summary Report and fill out the supporting evidence for questions 1a, 2a and 3a of the Child Outcomes Summary Form. CPSEs are required to meet to determine a preschool child's eligibility for preschool special education programs and/or services and review the summary evaluation results and reports from the approved evaluator. For preschool children found to be eligible, the CPSEs rate the child's functioning across settings in each of the three outcome areas identified in questions 1a, 2a, and 3a of the Child Outcomes Summary Form. Annually, a representative sample of school districts are required to collect and submit entry and exit data to the State Education Department (SED) through SIRS for preschool children who leave preschool special education services anytime during the school year. All school districts are required to maintain entry level assessment data on all preschool children who are determined to be eligible for preschool special education programs or services.

**Exit assessments:**

While all preschool children who were initially evaluated on or after March 1, 2006 and found eligible for preschool special education programs and/or services are required to have entry assessment results, exit assessments only need to be conducted for preschool children with disabilities who stop receiving preschool special education services due to program completion or decategorization during the school year in which the school district is required to report exit data on this indicator. The only children in sample school districts who require exit assessments are those who received an entry assessment and participated in preschool special education for at least six months prior to exiting.
In order to collect exit assessment data on the progress preschool children with disabilities have made as a result of receiving preschool special education programs and/or services, the Committee on Special Education (CSE) must arrange for exit assessment(s) in the three early childhood outcome areas to be conducted as part of the reevaluation process to determine the child’s eligibility for school age special education. Whenever possible and appropriate, the exit assessment instruments should be the same assessment instruments used by the preschool evaluator for the entry assessment process. The results of these assessments must be provided to the CSE. The CSE will review the exit assessment results and determine the child’s progress rating in the three identified areas. Some preschool children with disabilities may be referred to the CPSE for possible declassification prior to aging out of preschool special education programs and/or services. When considering declassification of a preschool child with a disability, the CPSE must arrange for a reevaluation by an approved evaluator selected by the parent. The reevaluation process must include conducting exit assessments that measure the child’s progress in the three early childhood outcome areas. Whenever possible, the exit assessment instruments should be the same assessment instruments used by the initial approved preschool evaluator for the entry assessment process. The results of the reevaluation and exit assessments must be provided to the CPSE, including the child’s parents and the person designated by the municipality in which the child resides. The CPSE must review the reevaluation and assessment results and determine the child’s progress rating in each of the three identified areas.

**Sampling Methodology**

Annually, NYS requires a representative sample of one/sixth of the school districts in the State to report progress data on this indicator through the individual student data collection system, SIRS. The process for selecting a representative sample of school districts each year to report data on this indicator through the 2010-11 school year is described in NYS’ SPP, as revised in June 2007. NYS’ sampling plan is such that over the six-year SPP cycle, every school district will have submitted progress data on preschool outcomes at least once. New York City (NYC) is the only district with a total enrollment of over 50,000 students and submits data for every special education indicator every year. Every school district except NYC reported progress data on all eligible preschool children. NYC reports progress data on a representative sample of students.

Beginning in the 2007-08 school year, NYS collected entry and exit scores on the Child Outcomes Summary Form on an individual student basis through SIRS and categorized children in the progress categories as described in the measure. Except for NYC, all school districts assigned to report data on this indicator are required to provide data on all exiting preschool children that meet the criteria (no sampling is permitted). See the 2007-08 SIRS policy manual and 2007-08 SIRS Dictionary of Reporting Data Elements posted at: http://www.p12.nysed.gov/sedcar/archived/0708documentation/DataDictionary.doc.
Reporting data through this new system is expected to improve the accuracy of these data. NYS collects raw data on the score each child receives on the Child Outcomes Summary Form at entry and again at exit from preschool special education programs or services. Based on the raw data, the State reports children in the correct progress category. Having data at the individual student level and the ability to track children longitudinally until they no longer attend school in NYS provides the State greater capacity for data analysis.

NYC is required to maintain documentation regarding selecting students for sampling, since they are the only school district that are allowed to report these data for a sample of eligible students. The totally random sampling methodology and required documentation should eliminate selection bias. SED will attempt to prevent missing data by first describing precisely what the State needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection will improve after the first year and will continue to improve as long as requirements remain unchanged. All issues of confidentiality are handled in accordance with the rules and procedures in the Family Educational Rights and Privacy Act (FERPA). SED guards against divulging personally identifiable information by not reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.

**Progress Data 2007-08**

At the end of the 2007-08 school year, 112 school districts reported progress data on 1,678 preschool students with disabilities in each early childhood outcome area. Two school district’s data were missing at the time this report was prepared. The 1,695 students left preschool special education programs and/or services during the 2007-08 school year after receiving special education for at least six months. The results for these students in the three early childhood outcome areas are reported below.

Discussion of 2008-09 Baseline Data:

For the 2008-09 school year, 117 school districts provided preschool outcomes data on preschool children with disabilities who left preschool special education during the 2008-09 school year after receiving special education programs or services for at least 6 months since first being evaluated and determined eligible (since February 1, 2006). Some students in this group may have received special education services for a longer period of time compared with progress data reported for the 2007-08 school year. These data are representative of school districts in NYS because of our sampling methodology in selecting our annual sample of districts. Our methodology is provided in the SPP Attachment 2.

The baseline data indicate that more than half of preschool children with disabilities in each of the three preschool outcome areas are functioning within age expectations upon exiting preschool special education. The greatest percentage of preschool children functioning within age expectations is in the “Use of Appropriate Behaviors to Meet Their Needs” outcome area (63.2%).

The baseline data also indicate that more than 80% of preschool children with disabilities in each of the three preschool outcome areas substantially increased their rate of growth, with most children improving in the “Acquisition of Knowledge and Skills” outcome area (85.3%).

Outcome C: Use of appropriate behaviors to meet their needs
1. Of those children who entered or exited the program below age expectations in Outcome C, the percent who substantially increased their rate of growth by the time they exited the program.

|         | 83%                                     |         | 83.5%                                   |         | 84%                                     |         | 84.5%                                   |

2. The percent of children who were functioning within age expectations in Outcome C by the time they exited the program

|         | 63.2%                                   |         | 63.3%                                   |         | 63.4%                                   |         | 63.5%                                   |

In FFY 2009, USED requested states to add two additional years to the SPP, including adding two additional years of targets.

Over the next two years, NYS is targeting 0.5 percentage point improvements for each outcome area in the percentage of children who entered or exited the program below age expectations who substantially increased their rate of growth by the time they exited the program; and .1 percentage point improvement in the percentage of children who function within age expectations in each outcome area by the time they exited the program. Improvement activities, particularly through the ECDCs, will be directed to instruction leading to improved outcomes in these areas.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1. This indicator was discussed in depth with parent groups and with NYCDOE parent coordinators. The Department reviewed the parent survey provided by the National Center for Special Education Accountability Measures (NCSEAM) and consulted with NCSEAM staff in developing the SPP for this indicator.

New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

Monitoring Priority: FAPE in the LRE

Indicator 8: Percent of parents with a child receiving special education services who report that schools facilitated parent involvement as a means of improving services and results for children with disabilities.
(20 U.S.C. 1416(a)(3)(A))

Measurement:

Percent = [(# of respondent parents who report schools facilitated parent involvement as a means of improving services and results for children with disabilities) divided by the (total # of respondent parents of children with disabilities)] times 100.

Data Source:

NYS uses a modified version of the survey developed by the National Center for Special Education Accountability Measures (NCSEAM). NYS’ parent survey contains 25 questions. All surveys returned with at least 15 of the 25 questions answered are the denominator for the calculation. The numerator is the number of surveys with an overall positive parental involvement rating. These are surveys in which parents indicated that they “agree,” “strongly agree” or “very strongly agree” with at least 51 percent of the questions.

NYS’ Calculation:

NYS' statewide calculation uses a weighted average to control for the required minimum sample size response from every school district. This is necessary because many school districts received a response that was well above the minimum sample size required and, in other school districts, the minimum response required was not achieved. In order to give each school district’s positive response rate a proportional weight relative to their sample size in the State’s average, the percent of positive responses was weighted by the sample size of each school district. For example, in one school district with a minimum sample size of 53, 30 surveys were returned with at least 15 questions answered with 18 of the 30 questions answered positively. This
district’s weighting in the State’s average is 18/30*53 or 31.8 surveys with positive parental response. As another example, in another school district with a minimum sample size of 87,172 surveys were returned with at least 15 questions answered with 148 of the 172 questions answered positively. This district’s weighting in the State’s average is 148/172*87 or 74.8 surveys with positive parental response. The weighting helps to achieve an equal contribution from every school district of their positive parental response rate.

Note: When NYS reports school district data on this indicator as part of the public reporting requirement, weightings are not used. A school district’s actual data are displayed.

### Overview of Issue/Description of System or Process

State law and regulations require each school district, upon initial referral of a student to special education, to provide the parents with a copy of the State’s publication *A Parents Guide to Special Education* or a locally developed guide. The State’s publication, *A Parents Guide to Special Education*, is available on the Department’s web site. NYS has a mandated Procedural Safeguards Notice to ensure all parents receive the same information regarding their rights under IDEA. In addition to the parent of the student being discussed, NYS requires an additional parent of a student with a disability to participate in meetings of the Committee on Special Education (CSE) and Committee on Preschool Special Education (CPSE) to assist the parent in understanding the process.

As a component of focused monitoring reviews, Special Education Quality Assurance (SEQA) seeks input from parents of students with disabilities on various aspects of their experiences with their school district and special education programs. Statements from parents on both the positive aspects of special education within a school district and/or the areas in need of some improvement are considered in the school improvement planning process.

### Plan to collect baseline information

#### Administration

School districts will be responsible to provide the parent survey to a sample of parents of students for whom their school district has individualized education program (IEP) responsibility (i.e., parents of students who are provided special education services in district-operated programs or under contract with other service providers).

School districts will be directed to employ a variety of methods to encourage parents to complete the survey, including but not limited to using paper surveys, telephone surveys, interview surveys and web-based surveys. Parents will also be able to complete the survey through an Internet website made available by the Department. School districts will be responsible to ensure a statistically sound return rate.
Survey Instrument

NYS will use a modified version of the survey developed by the National Center for Special Education Accountability Measures (NCSEAM). Twenty-five (25) items from NCSEAM’s Parent Survey – Part B have been selected based on the rules established for item selection to ensure reliability and validity of the use of the survey. The directions, format and wording of some questions were revised slightly. A copy of the survey to be used by NYS is attached at the end of this Indicator section.

Timelines for Data Collection and Reporting

For the 2005-06 school year, surveys will be disseminated to school districts no later than February 2006. Surveys returned by August 31, 2006 will be included to establish the baseline data. Annually thereafter, school districts to be sampled in any year will receive the parent survey at the beginning of the school year and will have the entire year to survey parents.

Report Criteria

The criteria to be used to determine if a parent has rated his or her school district positively for parental involvement will be as follows: The survey must be completed with a minimum of 15 responses and at least 51% of the responses must receive a positive rating of either agree, strongly agree, or very strongly agree. For district reporting, districts that do not have the minimum number of parent surveys returned as indicated in the sampling methodology will be reported as not having positive parent involvement with the reason noted.

Sampling Methodology

Sampling will be used to establish the 2005-06 baseline for this indicator. One-sixth of the school districts in NYS will be randomly selected. This represents approximately 120 school districts each year. The New York City (NYC) School District will be included in the sample each year. It is the only school district in the State with a total enrollment of 50,000 or more students.

NYS has distributed all school districts among six statewide representative samples. These six groups of school districts were tested with Analysis of Variance (ANOVA) and there was no statistical difference among the six groups of school districts on the population variables described in Attachment 2. These population variables were from the 2000 decennial census.

School districts will be expected to select a representative sample of its parents to be surveyed, using the directions provided by the State Education Department (SED). Schools would be encouraged to oversample to ensure statistically sound response rates. All school districts will have a choice of reporting data on all eligible students for this indicator or they may submit data on a randomly selected sample of minimum number of students using the sampling guidelines provided by the Department. The
vast majority of school districts will need to submit data on this indicator on behalf of all eligible students. For some large school districts, if it will be less burdensome to report on a sample of students, the methodology described below (totally random sampling) is likely to produce a sample that is representative of the school district in terms of all variables, since every eligible student has the same chance as another student to be selected for the sample.

<table>
<thead>
<tr>
<th>Federal Indicator Number</th>
<th>Eligible Population of Students From Which A Random Sample Must be Selected</th>
<th>Minimum Number of Students in the Sample</th>
<th>Method for Selecting Students</th>
<th>Required Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>Every preschool and school-age student with a disability who is provided special education services in district-operated program or under contract with other service providers.</td>
<td>Use a sampling calculator. Require 95% confidence interval and plus or minus 10% margin of error. Expect 10% response rate, so require oversampling by 90% of minimum number identified by the calculator.</td>
<td>Random selection using a random number table.</td>
<td>Documentation period is seven years. Maintain list of all eligible students, copy of Random Number Table used, beginning random number for selecting students and list of all students who were selected and their number.</td>
</tr>
</tbody>
</table>

SED will require that school districts maintain documentation as described below if they choose to report data on a sample of students. The totally random sampling methodology and required documentation should eliminate selection bias. School districts will be encouraged to provide surveys in a variety of ways to improve the response rate. The Department will attempt to prevent missing data by first describing precisely what the State needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection will improve after the first year and will continue to improve as long as requirements remain unchanged. All issues of confidentiality will be handled by in accordance with the rules and procedures in FERPA. The Department will also guard against divulging personally identifiable information by not reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.

**Steps to Ensure Valid and Reliable Estimates**

The Office of Special Education (OSE) will annually provide information to parent centers, advocacy agencies and the New York State Parent Teacher Association (PTA) as well as other networks and agencies (e.g., Early Childhood Education Centers (ECDCs)) to request their assistance in encouraging parents of students with disabilities to complete and return the parent survey when requested by their school districts.
In addition to English, the surveys will be made available in the six predominant languages in this State (Spanish, Russian, Simplified Chinese, Haitian Creole, Bengali, and Urdu). Translators would need to be provided to ensure parents who do not read or understand one of these languages have an opportunity to participate in the survey.

Surveys will be returned directly to an independent research firm working with SED to print, disseminate, collect analyze and report on the parent survey information. A parent’s individual responses will be confidential.

2005-06 Baseline Data

In 2005-06, 86.9% of parents surveyed indicated that schools facilitated parent involvement as a means of improving services and results for children with disabilities.

Discussion of Baseline Data

The baseline data was calculated based on the following:

- Number of surveys with at least 15 completed responses: 9,261
- Number of surveys with at least 51% positive responses: 8,040
- Positive parental response rate: 86.8%
- Weighted (on the basis of sample size) positive parental response rate was 86.9%

During the 2005-06 school year, 113 school districts in the State surveyed parents by using the modified version of the NCSEAM survey that NYS adopted to collect data for this indicator. The survey may be found at the end of this indicator. The 113 school districts are representative of the State. Over the six-year period of this SPP, all school districts will have administered this survey. The following are the statewide results:

Response Rate:

- The Statewide response rate was 128 percent based on data from 113 school districts. The sum of all the minimum sample sizes was 7,469 and 9,575 surveys were returned. The response rate was over 100 percent of the minimum required because the State recommended over-sampling parents to get sufficient response rate. The State asked school districts to either send the survey to all parents of students with disabilities in the school district or to 10 times the number of parents from whom responses were needed in order to have the minimum sample of responses.
- Data indicate that 58 school districts out of 113 had a sufficient response rate. The response rate in 55 of the 58 school districts was more than a 100 percent of the sample size (16 of the 55 school districts had a response rate of 200% or higher).
  - 17 school districts had a response rate that was 75 percent to 99 percent of the minimum sample size.
  - 13 school districts had a response rate that was 50 percent to 74 percent of the minimum sample size.
Part B State Performance Plan (SPP) for 2005-2012

New York State
Revised August 2012

- 25 school districts had a response rate that was less than 50 percent of the minimum sample size.

The response rates by Need Resource Capacity category of school districts were as follows:

Survey Responses:
- Number of surveys with at least 15 completed responses: 9,261 out of 9,575 or 96.7%.
- Number of surveys with at least 51 percent positive responses: 8,040
- Positive parental response rate: 86.8 percent \( \left( \frac{8,040}{9,261} \times 100 \right) \)
- Weighted (on the basis of sample size) positive parental response rate: 86.9 percent.
- In 2005-06, 58 school districts had sufficient sample size of surveys returned. Of these school districts 29 had positive parental response rates of 89.6% or higher and 29 had rates that were lower. The range of positive parental response among these school districts was 76.9% to 100.0%.

Analysis of Survey Items: The top three questions with which parents most often agreed were:
- 95.7 percent of respondents agreed with the statement, “At the IEP meeting, we discussed accommodations and modifications that my child would need.”
- 95.7 percent of respondents agreed with the statement, “Teachers and administrators respect my cultural heritage.”
- 94.1 percent of respondents agreed with the statement, “Over the past year, special education services have helped me and/or my family know where to go for support to meet my child’s need.”

Two of the questions with which parents most often disagreed were as follows:
- 15.3 percent of respondents disagreed with the statements, “The school explains what options I have if I disagree with a decision of the school.”
- 14.1 percent of respondents disagreed with the statement, “Over the past year, special education services have helped me and/or my family feel more confident in my skills as a parent.”
All reports from parent surveys were disaggregated by need/resource capacity category of school districts as well as by quality assurance regional offices to facilitate provision of technical assistance to school districts.

NEW YORK STATE PARENT SURVEY

NEW YORK STATE EDUCATION DEPARTMENT
PARENT QUESTIONNAIRE – SPECIAL EDUCATION*

Your answers to the following questions will assist your school, your school district and the State to improve how school districts help parents of students with disabilities to be involved in their children’s special education programs. Parents in school districts throughout the State are completing this survey. The results for your school district will be reported by the State.

- Your responses are important and will remain confidential.
- Some questions will apply to the school district; others to the school your child attends.
- Mail the form using the return envelope.

Use a pencil only. Fill in circle completely: ●

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

**Monitoring Priority: Disproportionality**

**Indicator 9:** Percent of districts with disproportionate representation of racial and ethnic groups in special education and related services that is the result of inappropriate identification.

(20 U.S.C. 1416(a)(3)(C))

**Measurement:**

\[
\text{Percent} = \left( \frac{\text{(# of districts with disproportionate representation of racial and ethnic groups in special education and related services that is the result of inappropriate identification)}}{\text{(of districts in the State)}} \right) \times 100.
\]

**New York State’s (NYS) Measurement:**

**Step One:**

NYS compares the percent of total enrollment of each race/ethnic group in special education with the percent of total enrollment of all other race/ethnic groups in special education combined. For notifications of school districts since the 2005-06 school year, the State used the following definition of “disproportionate representation” and in subsequent years may revise the definition by lowering the relative risk ratio, weighted relative risk ratio, as well as the minimum numbers of students. (Clarified in February 2008 that the State’s definition of significant disproportion is the same as the definition of disproportion.)

NYS uses the relative risk and weighted relative risk ratios, with minimum “n” sizes to identify school districts whose data indicate disproportionate representation of racial and ethnic groups in special education. See the definition of “Disproportionate Representation and Methodology” described below.

**Step Two:**

The State provides for the review of policies, procedures and practices each year a school district’s data shows a disproportionate representation based on race/ethnicity as follows:

- The first year a district’s data indicates disproportionality, the State requires the district to complete a State-developed self-review monitoring protocol, which requires the review of specific policies, practices and procedures. The monitoring protocol for this review is available at: [http://www.p12.nysed.gov/specialed/spp/9selfreviewethnic2011.htm](http://www.p12.nysed.gov/specialed/spp/9selfreviewethnic2011.htm).
A report of the results of this review is submitted by the district to the State. At the time of submission, school districts that identify issues of noncompliance are immediately notified that they must correct all issues of noncompliance as soon as possible, but not later than 12 months.

- For subsequent years in which a school district’s data indicates significant discrepancies, the State conducts the monitoring review of the district’s policies, procedures and practices as identified above.

Step Three:

When calculating the results for this indicator, the State divides the number of school districts with significant disproportionality and inappropriate policies, procedures and/or practices by the total number of school districts in the State.

Data Source:

Data on students’ race/ethnicity and special education classification are collected through the Student Information Repository System (SIRS) at an individual student level. Results of monitoring reviews submitted are entered into the PD web-based data collection system.

NYS uses data collected and reported to the United States Education Department (USED) in the annual 618 report on Table 1 of Information Collection 1820-0043 (Report of Children with Disabilities Receiving Special Education Under Part B of the Individuals with Disabilities Education Act (IDEA), As Amended) and the State’s analysis to determine if the disproportionate representation of racial and ethnic groups in special education and related services was the result of inappropriate identification. These data are also provided to USED in the corresponding EDFacts files.

Definition of Disproportionate Representation and Methodology (title added 1/10)

NYS uses the relative risk and weighted relative risk ratios, with minimum “n” sizes to identify school districts whose data indicate disproportionate representation of racial and ethnic groups in special education. The minimum “n” size requirement used to compute disproportionate representation does not exclude school districts from the denominator when calculating results for this indicator, but only districts that meet the minimum “n” size are included in the numerator.

Disproportionate Over-representation in Special Education (title added in 2/09):
- At least 75 students with disabilities enrolled on the first Wednesday in October;
- A minimum of 30 students (disabled and nondisabled) of particular race/ethnicity enrolled on first Wednesday in October;
- At least 75 students (disabled and nondisabled) of all other race/ethnicities enrolled on first Wednesday in October;
- At least 10 students with disabilities of particular race/ethnicity enrolled in district on the first Wednesday in October; and
Either:
  ▪ Both the relative risk ratio and weighted relative risk ratio for any race/ethnic group is 2.5 or higher; or
  ▪ All students with disabilities in special education are of only one race/ethnic group regardless of the size of the relative risk ratio and weighted relative risk ratio.

Disproportionate Under-representation in Special Education: (category added 2/09)
The district must meet the following criteria for three consecutive years:
- At least 75 students with disabilities enrolled in the district on the first Wednesday in October;
- Both the relative risk ratio and weighted relative risk ratio is less than or equal to 0.25;
- ((District enrollment of race] times [Risk of Other Races]) divided by 2.5 is greater than or equal to 10;
- Minimum district enrollment of other races is 75; and
- A district’s risk of race is less than 50% when compared to all other race/ethnicity groups statewide.

Overview of Issue/Description of System or Process
IDEA section 618(d) requires States to collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the local educational agencies (LEAs) of the State with respect to:
- the identification of children as children with disabilities, including the identification of children by particular disabilities;
- the placement in particular educational settings of such children; and
- the incidence, duration, and type of disciplinary actions, including suspensions and expulsions.

In the case of a determination of significant disproportionality with respect to the identification of children as children with disabilities, or the placement in particular educational settings of such children, the State shall:
- provide for the review and if appropriate revision of the policies, procedures, and practices used in such identification or placement to ensure that such policies, procedures, and practices comply with the requirements of IDEA;
- require any LEA identified to reserve fifteen percent of funds under section 613(f) to provide comprehensive coordinated early intervening services to serve children in the local education agency, particularly children in those groups that were significantly over identified; and
- require the LEA to publicly report on the revision of policies, practices, and procedures related to disproportionality.

Furthermore, IDEA section 616(a)(3) requires the Secretary to monitor states and the State to monitor LEAs using quantifiable and qualitative indicators to measure disproportionate representation of racial and ethnic groups in special education and
related services, to the extent the representation is the result of inappropriate identification.

As a result of the passage of NYS legislation in 1999 (Chapter 405 of the Laws of 1999), the State has been identifying school districts for disproportionality based on race and ethnicity issues among other special education issues since the 2000-01 school year. It has conducted three such notifications, in 2000-01, 2002-03 and 2004-05 school years. Identified school districts were assigned to one of three levels of technical assistance: “self-review,” “regional review” and “targeted.”

- School districts assigned to “targeted” form of technical assistance received extensive technical assistance through the Department’s staff and funded networks. They were required to receive approval of their Comprehensive System of Personnel Development (CSPD) plans, which contained improvement strategies. The CSPD development and review/approval process included a review of the identified school district policies, procedures and practices used in the identification and placement of students.
- School districts assigned to “regional-review” form of assistance were required to address resolution of their problems in their CSPD plan and participate in regional training programs sponsored by the Department or through local sources.
- “Self-review” school districts addressed the resolution of their issues in their CSPD plans with local and regional resources and documented their annual updates to the CSPD plan with support of the SETRC representative.

In the first two notifications (2000-01 and 2002-03), NYS used the chi-square formula with the addition of some minimum numbers of students in the total enrollment and in each expected value cell of the chi-square formula. In the third notification, after review of our methodology, we revised how the chi-square statistic was calculated and added the relative risk ratio calculation to our methodology to identify school districts that had significant disproportion. Only school districts with significant chi-square results, relative risk ratios of 1.2 or higher (or 0.5 or lower for the "removed from regular classes for less than 20 percent of the day placement category") and minimum numbers of enrollment were identified for significant disproportion.

Because of the requirement to establish a baseline that identifies disproportionality that is the result of inappropriate policies, practices and procedures, NYS will revise its methodology for addressing disproportionality as described below.

Plan to collect baseline data

By February 2006, NYS analyzed data and send notifications to school districts whose data indicate "significant disproportion," providing them with a State developed "Disproportionality Self-Review" monitoring protocol. The notifications will also trigger a re-direct of 15 percent of the school district's IDEA funds to support early intervening services.
By May 2006, these school districts were required to submit their completed self-review monitoring protocols of relevant school district policies, practices and procedures to the Department. The district must include community representatives from diverse racial and ethnic backgrounds in the review of the policies, procedures and practices.

Based on this self-review, if a school district determines that one or more of its policies, procedures and/or practices requires revision, it must revise them and publicly post such revisions and report the corrective action to the Department.

If the State determines that the school district’s policies, procedures and practices are in compliance with federal and State requirements, the school district will not be required to complete another review of its policies, procedures or practices during the remaining period of the SPP. However, IDEA funds will continue to be redirected if data indicates discrepancy, based on the State’s definition. Furthermore, if school district’s data do not improve, the State may conduct another review of school district’s policies, practices and procedures.

School districts that are found to have inappropriate policies, procedures and/or practices through the self-reviews or Department verification reviews will be reported in the baseline data for the 2005-06 school year.

**Baseline Data for FFY 2005 (2005-06)**

Six out of ten school districts (or 0.9 percent of all school districts in the State) reported having significant disproportionate representation of minorities in special education that is the result of inappropriate policies, practices and procedures. This baseline data may be modified upon completion of verification reviews in four school districts.

**Discussion of Baseline Data**

- Ten (10) school district’s data for the 2004-05 school year indicated significant disproportionate representation of students based on race/ethnicity in special education using measurements described in the measurement section of this indicator.

- All 10 school districts completed a comprehensive self-review monitoring protocol during the 2005-06 school year and six of the 10 school districts reported that their policies, practices and procedures related to the identification of students for special education were less than 100 percent compliant and four school districts reported they were 100 percent in compliance with applicable laws and regulations.

- During the 2006-07 school year, the State will verify the results of the four school districts that reported 100 percent compliance.
The six school districts that reported having some inappropriate policies, practices and procedures will be required to self-correct, publicly report the correction, and provide documentation of correction to the State within one year from notification of noncompliance.

NYS’ baseline data (before completion of the verification procedures in four school districts that reported 100 percent compliance) is that six out of 684 school districts (0.9%) have significant disproportionate representation that is the result of inappropriate policies, practices and procedures.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

Monitoring Priority: Disproportionality

Indicator 10: Percent of districts with disproportionate representation of racial and ethnic groups in specific disability categories that is the result of inappropriate identification.

Indicator 10B: Percent of districts with disproportionate representation of racial and ethnic groups in special education placements that is the result of inappropriate policies, procedures and practices.*

*Note: Beginning with 2006-07 school year data, New York State (NYS) no longer reports in the Annual Performance Report on the percent of school districts with disproportionate representation of racial and ethnic groups in special education placement that is the result of inappropriate policies, procedures and practices.

(20 U.S.C. 1416(a)(3)(C))

Measurement:

Percent = [# of districts with disproportionate representation of racial and ethnic groups in specific disability categories that is the result of inappropriate identification] divided by (# of districts in the State) times 100.

NYS' Measurement:

Step One:

NYS compares the percent of total enrollment of each race/ethnic group that is identified by particular disabilities compared to other race/ethnic groups combined. For notifications of school districts since the 2005-06 school year, the State has used the following definition of “disproportionate representation” and in subsequent years may revise the definition by lowering the relative risk ratio, weighted relative risk ratio as well as the minimum numbers of students. The State’s definition of significant disproportion is the same as the definition of disproportion.

NYS uses the relative risk and weighted relative risk ratios, with minimum "n" sizes to identify school districts whose data indicate disproportionate representation of racial and ethnic groups in specific disability categories of Emotional Disturbance, Learning Disability, Mental Retardation, Other Health Impairment, Speech or Language Impairment and Autism. See the definition of “Disproportionate Representation and Methodology” described below. All school districts whose data are disproportionate are required to use a State developed self-review monitoring protocol to identify the regulations with which they are not in compliance. The results from the self-review
monitoring protocol are reported to the State and are used as the basis to determine the number of districts in which disproportionate representation is the result of inappropriate identification. (Clarification added January 2010) Districts that are identified based on their data for two consecutive years receive an on-site focused review to determine if their policies, practices and procedures are in compliance with State requirements.

Step Two:

The State provides for the review of policies, procedures and practices each year a school district’s data shows a disproportionate representation based on race/ethnicity in the disability category of students with disabilities as follows:

- The first year a district’s data indicates disproportionality, the State requires the district to complete a State-developed self-review monitoring protocol, which requires the review of specific policies, practices and procedures. A report of the results of this review is submitted by the district to the State. At the time of submission, school districts that identify issues of noncompliance are immediately notified that they must correct all issues of noncompliance as soon as possible, but not later than 12 months.
- For subsequent years in which a school district’s data indicates significant discrepancies, the State conducts the monitoring review of the district’s policies, procedures and practices as identified above.

Step Three:

When calculating the results for this indicator, the State divides the number of school districts with significant disproportionality and inappropriate policies, procedures and/or practices by the total number of school districts in the State.

Data Source:

Data on students’ race/ethnicity and special education classification are collected through the Student Information Repository System (SIRS), at an individual student level. Results of self-review monitoring protocols are submitted by school districts through the PD web-based data collection system.

NYS uses data collected and reported in the Annual 618 report on Table 1 of Information Collection 1820-0043 (Report of Children with Disabilities Receiving Special Education Under Part B of the Individuals with Disabilities Education Act (IDEA), As Amended) and the State’s analysis to determine if the disproportionate representation of racial and ethnic groups in specific disability categories was the result of inappropriate identification. These data are also provided to the United States Education Department (USED) in the corresponding EDFacts files.
### Definition of Disproportionate Representation and Methodology

NYS uses the relative risk and weighted relative risk ratios, with minimum “n” sizes to identify school districts whose data indicate disproportionate representation of racial and ethnic groups in specific disability categories. The minimum “n” size requirement used to compute disproportionate representation does not exclude school districts from the denominator when calculating results for this indicator, but only districts that meet the minimum “n” size are included in the numerator. The definition of “Disproportionate Representation” and methodology for calculating it is as follows:

**Disproportionate Over-representation in Specific Disability Categories (Emotional Disturbance, Learning Disability, Mental Retardation, Other Health Impairment, Speech or Language Impairment and Autism):**

- At least 75 students with disabilities enrolled on child count date* (the first Wednesday in October);
- A minimum of 30 students (disabled and nondisabled) of particular race/ethnicity enrolled on the child count date;
- At least 75 students of all other race/ethnicities were enrolled in district on child count date;
- At least 10 students with disabilities of particular race/ethnicity and disability enrolled in district on the child count date; and
- Either:
  - Both the relative risk ratio and weighted relative risk ratio for any race/ethnic group is 4.0 or higher; or
  - All students with disabilities in a specific disability category are of only one race/ethnic group regardless of the size of the relative risk ratio and weighted relative risk ratio.

**Disproportionate Under-representation in Special Education:**

The district must meet the following criteria for three consecutive years:

- At least 75 students with disabilities enrolled on child count date;
- Both the relative risk ratio and weighted relative risk ratio is less than or equal to 0.25;
- \((\text{District enrollment of race}) \times \text{[Risk of Other Races]}) / 4\) is greater than or equal to 10;
- Minimum district enrollment of other races is 75; and
- A district’s risk of disability by race is less than 50% when compared to all other race/ethnicity groups statewide.

*Note: Language regarding dates was changed to more generic terms “child count date” and “three consecutive years” to remain consistent with periodic changes in data collection rules in the Student Information Repository System (SIRS).
Overview of Issue/Description of System or Process

IDEA section 618(d) requires States to collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the local educational agencies of the State with respect to:

- the identification of children as children with disabilities, including the identification of children by particular disabilities;
- the placement in particular educational settings of such children; and
- the incidence, duration, and type of disciplinary actions, including suspensions and expulsions.

In the case of a determination of significant disproportionality with respect to the identification of children as children with disabilities, or the placement in particular educational settings of such children the State shall:

- provide for the review and if appropriate revision of the policies, procedures, and practices used in such identification or placement to ensure that such policies, procedures, and practices comply with the requirements of IDEA;
- require any local educational agency (LEA) identified to reserve fifteen percent of funds under section 613(f) to provide comprehensive Coordinated Early Intervening Services (CEIS) to serve children in the local education agency, particularly children in those groups that were significantly over identified; and
- require the LEA to publicly report on the revision of policies, practices, and procedures related to disproportionality.

Furthermore, IDEA section 616(a)(3) requires the Secretary to monitor states and the States to monitor LEAs using quantifiable and qualitative indicators to measure disproportionate representation of racial and ethnic groups in special education and related services, to the extent the representation is the result of inappropriate identification.

As a result of the passage of NYS legislation in 1999 (Chapter 405 of the Laws of 1999), the State has been identifying school districts for disproportionality based on race and ethnicity issues among other special education issues since the 2000-01 school year. It has conducted three such notifications, in 2000-01, 2002-03 and 2004-05 school years. Identified school districts were assigned to one of three levels of technical assistance: “self-review”; “regional review”; and “targeted”:

- School districts assigned to “targeted” form of technical assistance received extensive technical assistance through the Department’s staff and funded networks. They were required to receive approval of their Comprehensive System of Personnel Development (CSPD) plans, which contained improvement strategies.
- School districts assigned to “regional-review” form of assistance were required to address resolution of their problems in their CSPD plan and participate in regional training programs sponsored by the Department or through local sources.
- “Self-review” school districts addressed the resolution of their issues in their CSPD plans with local and regional resources and documented their annual updates to the
CSPD plan with support of the SETRC representative. The CSPD development and review/approval process included a review of the identified school district policies, procedures and practices used in the identification and placement of students.

In the first two notifications (2000-01 and 2002-03), NYS used the chi-square formula with the addition of some minimum numbers of students in the total enrollment and in each expected value cell of the chi-square formula. In the third notification, after review of our methodology, we revised how the chi-square statistic was calculated and added the relative risk ratio calculation to our methodology to identify school districts that had significant disproportion. Only school districts with significant chi-square results, relative risk ratios of 1.2 or higher (or 0.5 or lower for the "removed from regular classes for less than 20 percent of the day placement category") and minimum numbers of enrollment were identified for significant disproportion.

Because of the requirement to establish a baseline if the disproportionality is a result of inappropriate policies, practices and procedures, NYS will revise its methodology for addressing disproportionality to the following beginning in 2005-06 school year (using 2004-05 school year data).

**Plan to collect baseline data**

By February 2006, NYS analyzed data and sent notifications to school districts whose data indicate "significant disproportion" based on the above definition, providing them with a State developed "Disproportionality Self-Review" monitoring protocol. The notifications also required a school district to reserve 15 percent of the school district's IDEA funds to support early intervening services.

By May 2006, these school districts were required to submit their completed self-review monitoring protocols of relevant school district policies, practices and procedures to the Department. The district was required to include community representatives from diverse racial and ethnic backgrounds in the review of the policies, procedures and practices.

Based on this self-review, if a school district determines that one or more of its policies, procedures and/or practices require revision, it must revise them and publicly post such revisions and report the corrective action to the Department. If a school district determines its policies, procedures and/or practices are appropriate and do not require revision, the Department will arrange for verification of this determination. If the State determines that the school district's policies, procedures and practices are in compliance with federal and State requirements, the school district will not be required to complete another review of its policies, procedures or practices during the remaining period of the SPP. However, IDEA funds will continue to be redirected if data indicates discrepancy, based on the State's definition. Furthermore, if school district's data do not improve, the State may conduct another review of school district's policies, practices and procedures.
School districts that are found to have inappropriate policies, procedures and/or practices through the self-reviews or Department verification reviews will be reported in the baseline data for the 2005-06 school year.

**Baseline Data for FFY 2005 (2005-06)**

NYS’ baseline data (before completion of the verification procedures in 10 school districts that reported 100 percent compliance) is that six out of 684 school districts (0.9%) have significant disproportionate representation in specific disability categories that is the result of inappropriate policies, practices and procedures and four out of 684 (0.6%) school districts have significant disproportionate representation in particular settings that is the result of inappropriate policies, practices and procedures.

**Explanation of Baseline Data**

- 13 school districts’ data for the 2004-05 school year indicated significant disproportionate representation of students in specific disability categories based on race/ethnicity.
- Seven school districts’ data for the 2004-05 school year indicated significant disproportionate representation of students in particular settings based on race/ethnicity.
- All 20 school districts completed a comprehensive self-review monitoring protocol during the 2005-06 school year. Six of the 13 school districts identified for significant disproportionate representation in specific disability categories reported that their policies, practices and procedures related to the identification of students by specific disability categories were less than 100 percent compliant and seven school districts reported they were 100 percent in compliance with applicable laws and regulations. Four of the 7 school districts identified for significant disproportionate representation in particular placements reported that their policies, practices and procedures related to the placement of students in particular settings were less than 100% compliant and 3 school districts reported they were 100% in compliance with applicable laws and regulations.
- During the 2006-07 school year, the State will verify the results in the 10 school districts that reported 100% compliance.
- The 10 school districts that reported less than 100 percent compliance will be required to self-correct, publicly report the correction, and provide documentation of correction to the State within one year from notification of noncompliance.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

Monitoring Priority: Effective General Supervision Part B / Child Find

Indicator 11: Percent of children who were evaluated within 60 days of receiving parental consent for initial evaluation or, if the State establishes a timeframe within which the evaluation must be conducted, within that timeframe. 
(20 U.S.C. 1416(a)(3)(B))

Measurement:

(a) # of children for whom parental consent to evaluate was received.
(b) # of children whose evaluations were completed within 60 days (or State established timelines*).

Account for children included in (a) but not included in (b). Indicate the range of days beyond the timeline when the evaluation was completed and any reasons for the delays.
Percent = [(b) divided by (a)] times 100.**

*The State’s established timelines to complete the initial evaluation and eligibility determinations is 30 school days for preschool students and 60 calendar days for school-age students.

**Language in the Measurement was changed to reflect United States Education Department (USED) guidance issued in March 2009, which consolidated items (b) and (c) into one category (b) to simplify the Measurement. This change does not affect computations of results.

New York State’s (NYS) Calculation:

In reporting baseline data for 2005-06, NYS computed its baseline data by adding “d. # of students whose evaluations were completed outside the required timeline but for reasons that were in compliance with State requirements. These students were added to the numerator, so the formula was [(b+c+d) divided by (a)] times 100.

New York’s current formula for calculating results for this indicator is as follows:
(a) # of children for whom parental consent to evaluate was received (Does not include students whose evaluations were completed past the State-established timelines for reasons that are in compliance with State requirements.)
(b) # of children whose evaluations were completed within 30 school days for preschool children and 60 calendar days for school-age students.

Percent = [(b) divided by (a)] times 100.
Data Source:

NYS uses individual student data taken from the State data system. In 2005-06 NYS collected aggregated data from sample schools using the PD-9 form. In 2006-07 the State collected aggregated data using the PD-11 form. Beginning with the 2007-08 year, NYS collects individual student data for this indicator via the Student Information Repository System (SIRS) and verifies these data by displaying them in a VR11 report, which was developed in the PD Data System. SIRS is NYS’ individual student data reporting system.

NYS’ Method Used to Collect Data

NYS collects individual student data through SIRS. School districts report specific dates when special education events occur, such as the date of referral, date of written parent consent for an initial individual evaluation and the date of the Committee on Preschool Special Education (CPSE) or Committee on Special Education (CSE) meeting to discuss evaluation results. Information is also collected regarding the number of days from receipt of parent consent to evaluate the child and the date of the CPSE or CSE meeting to discuss evaluation results. If the number of days exceeds the State established timelines, reasons for delays are collected. Some reasons are considered to be in compliance with State requirements and other reasons are not in compliance. Each school district’s compliance rate is calculated. NYS requires documentation from each school district whose compliance rate is less than 100 percent that demonstrates each student’s evaluation was completed and that it complies with the regulatory timelines associated with timely completion of initial individual evaluations.

Overview of Issue/Description of System or Process

NYS law and regulations require the evaluation and eligibility determination of a preschool student be made within 30 school days of receipt of the parent’s consent to evaluation. The CPSE provides the parent with a list of approved programs that have a multidisciplinary evaluation component. The parent selects the approved evaluation program to conduct the individual evaluation of his or her child and the board of education arranges for the evaluation by the service provider selected by the parent. In addition, with the consent of the parents, approved evaluators and CPSEs must be provided with the most recent evaluation report for a child in transition from programs and services provided pursuant to title two-a of article 25 of the Public Health Law.

For school-age students, the initial evaluation to determine if a student is a student with a disability must be completed within 60 calendar days of receiving parental consent for the evaluation, with exceptions for students who transfer to another school district after the evaluation period has begun and when the parent of a student repeatedly fails or refuses to produce the student for the evaluation.
Baseline Data for FFY 2005 (2005-06)

NYS did not collect this information prior to 2005-06. A new PD-9 form has been developed to begin collecting data on the timely determinations of eligibility for preschool and school-age students from the receipt of parental consent to evaluate to the determination of eligibility and the reasons for delays. Baseline data will be collected in 2005-06 and reported in the February 2007 revised SPP.

Plan to Collect Baseline Data

NYS will collect data on an annual basis from a statewide representative sample of school districts in the State using a new PD 9 form. The PD form must be submitted by October 15th annually.

Baseline data will be collected on children that meet the following criteria:

• All preschool students (or the minimum number required in a sample) for whom parents provided consent to evaluate for special education programs and/or services anytime during the 2005-06 school year (July 1, 2005 to June 30, 2006), regardless of the source of referral; and

• All school-age students (or the minimum number required in a sample) for whom parents provided consent to evaluate for special education programs and/or services anytime during the 2005-06 school year (July 1, 2005 to June 30, 2006), regardless of the source of referral, age, and the school students attended or currently attend.

To collect baseline data on the timeliness of eligibility determinations for children referred for preschool special education programs and/or services, the PD form will direct school districts to report the following information:

• The number of preschool children whose parents provided consent to evaluate for special education programs and/or services during the 2005-06 school year (July 1, 2005 – June 30, 2006) and the number of school days within which eligibility determinations were made for preschool children (within 30 days or less; within 31-40 days; within 41-50 days; and more than 50 days) both for students determined eligible and not eligible for preschool special education services.

• The reasons when the number of children with consent for evaluation exceeds the number of children for whom an eligibility determination was made (e.g., evaluations pending; parents withdrew consent; child moved to another school district; other reason).

• The reasons for delays in the initial eligibility determination of preschool children (e.g., evaluator not available; parent did not make the child available for the evaluation; parent canceled the scheduled evaluation and selected another approved evaluator; child transferred into the district after the initial evaluation was initiated in another school district; other reason).

To collect baseline data on the timeliness of eligibility determinations for school-age students for special education programs and services, the PD form will direct the school districts to report the following information:
Part B State Performance Plan (SPP) for 2005-2012

New York State

Revised August 2012

- The number of school-age students whose parents provided consent for an initial evaluation for special education programs and/or services during the 2005-06 school year (July 1, 2005-June 30, 2006).
- The reasons for a greater number of students with consent for evaluation than the number of students with initial eligibility determinations (e.g., numbers awaiting evaluations; numbers whose parents withdrew consent to evaluate; numbers who moved to another school district before the evaluation was completed; other reason).
- The reasons for the delays in the initial eligibility determinations (e.g., shortage of personnel to conduct the evaluation; parent repeatedly did not make the student available for the evaluation; student transferred into the district after the evaluation period began in the prior school district and the parent and new district agreed to an extended time period; other reason).
- The number of calendar days within which eligibility determinations were made for school-age students (within 60 days or less; within 61-70 days; within 71-80 days; within 81-100 days and more than 100 days) both for students determined eligible and not eligible for school-age special education services.

The State Education Department (SED) will conduct random data verification reviews to ensure accurate reporting. SED will also establish procedures to require corrective action in school district that report noncompliance.

Sampling methodology

Sampling will be used to establish the 2005-06 baseline for this indicator. One-sixth of the school districts in NYS will report data for this indicator annually until all school districts have reported data within six years. This represents approximately 120 school districts each year. The New York City (NYC) School District will be included in the sample each year. It is the only school district in the State with a total enrollment of 50,000 or more students.

NYS has distributed all school districts among six statewide representative samples. These six groups of school districts were tested with Analysis of Variance (ANOVA) and there was no statistical difference among the six groups of school districts on the population variables described in Attachment 2.

For 2005-06 and 2006-07, school districts scheduled to report on Indicator 11 had a choice of reporting data on all eligible students or submitting data on a randomly selected sample of minimum number of students using the sampling guidelines provided below.

<table>
<thead>

<td></td>
</tr>
</tbody>
</table>

SED required that school districts maintain documentation as described above if they chose to report data on a sample of students. The totally random sampling methodology and required documentation would eliminate selection bias. The State would attempt to prevent missing data by first describing precisely what SED needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection was expected to improve after the first year and continue to improve as long as requirements remain unchanged. All issues of confidentiality are handled in accordance with the rules and procedures in FERPA. SED guards against divulging personally identifiable information by not reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.

NOTE: Beginning with reporting for 2007-08, the option of sampling students for Indicator 11 was discontinued. No districts scheduled to report on this indicator, except for NYC, are permitted to sample students to report for this indicator. See Sampling Plan, Attachment 2.

**Baseline Data for FFY 2005 (2005-06)**

For the 2005-06 school year, 116 school districts that are representative of the State provided data to the State on the number of preschool and school-age students that were referred to the CPSE or CSE for an initial determination of eligibility for special education programs and/or services and the numbers of these children that were determined eligible and the number that were determined not eligible within 30 school days for preschool children and within 60 calendar days for school-age students. School districts also provided reasons for delays in the determinations of eligibility. Of the 116 school districts reporting data for this indicator, 114 provided information on all eligible children and 2 provided information on a sample of students.

The following are baseline data for the 2005-06 school year. The baseline data will be re-established in the 2006-07 school year because this indicator’s timeline was revised by the USED from a measure of the number of days between parental consent to
evaluate to determination of eligibility for special education to a measure of time between parental consent to evaluate to the date when evaluation was completed.

Reasons

Following is an analysis of the reasons reported that the school districts were not able to meet the State required timeline. Reasons have been separated into two categories: those that are determined to be "in compliance" with State regulations and those that are determined to be "out of compliance" with State regulations.

Some of the “in compliance” reasons for exceeding the required timeline for 1450 preschool children and 462 school-age students were as follows:
- Parents withdrew consent to evaluate
- Student/parent moved out of school district before the determination of eligibility
- Parents refused or repeatedly did not make the child available for the evaluation
- Parents cancelled the evaluation/selected another evaluator
- Child transferred to a new district after the evaluation period began and parents and new district agreed to an extended time period.

Some of the “out of compliance” reasons provided by school districts exceeding the required timeline for 2,578 preschool and 1,594 school age students were as follows:
- Shortages of personnel to conduct evaluations
- Additional evaluations were needed than originally scheduled
- Scheduling difficulties that cause untimely CPSE or CSE meetings
- Still awaiting eligibility determination as of reporting date
Extent of Delays

Following is an analysis of the number of days past the timeline that eligibility determinations were made for preschool children. Some of these delays are for reasons determined to be "in compliance" while others have been determined to be "out of compliance". However, NYS did not collect data in such a way as to be able to differentiate between the two types of delays:

Discussion of 2005-06 Baseline Data

- NYS collected aggregate numbers of students in each school district according to the number of days past the timeline when eligibility determinations were made, so we do not have data to be able to differentiate the delays between reasons that are “in compliance” and “not in compliance” with State regulations.

- The baseline data provided above indicates that significantly larger percentages of school-age students’ eligibility determinations are made within the required timeline compared to preschool children’s eligibility determinations. This is indicative of NYS’ shorter time line for determining eligibility for preschool children.
• An analysis of the baseline data by SEQA region indicates that the overall rate for determination of eligibility within required timelines for preschool and school-age students combined is as follows from highest to lowest:
  Western: 76.4 percent; Eastern: 71.9 percent; New York City: 69.1 percent; Long Island: 68.2 percent; Central: 59.1 percent and Hudson Valley: 57.2 percent

• Of all the delays in determination of eligibility for preschool children, 39.2% were for 31-40 days, 25.6 for 41-50 days, 15.3% for 51-60 days and 19.8% for more than 60 days.

• Of all the delays in determination of eligibility for school-age students, 28.7% were for 61-70 days, 21.8% for 71-80 days, 29.6% for 81-100 days and 20.0% for more than 100 days.

**Baseline Data for FFY 2006 (2006-07)**

Federal changes in the definition of the indicator in 9/06 necessitated resetting a new baseline. 2006-07 school year data are the State’s new baseline data; they cannot be compared to prior year’s data.

NYS’ new baseline data are that 64.2 percent of all students received evaluations within the State required timeline. School age students were more likely to receive a timely evaluation at 78.4 percent compared to preschool students at 44.2 percent.

During the 2006-07 school year, one sixth of the school districts in the State were required to report data for this indicator. The data provided below represents data from 113 school districts. All school districts except NYC provided data on all eligible children. NYC provided data for a representative sample.

</table>

**Reasons**

Following are reasons why school districts were not able to meet the State required timeline. Reasons have been separated into two categories: those that are determined to be "in compliance" with NYS regulations and those that are determined to be "out of compliance" with NYS regulations.

As stated in NYS’ measure for this indicator, the percent does not include students whose evaluations were completed past the State established timelines for reasons that are in compliance with State requirements. Some of the “in compliance” reasons for exceeding the required timeline for 1,338 preschool children and 374 school-age students were as follows:

- Parents withdrew consent to evaluate.
- Student/parent moved out of school district before the evaluation was completed.
Parents refused or repeatedly did not make the child available for the evaluation.
Parents canceled the evaluation/selected another evaluator.
Child transferred to a new district after the evaluation period began and parents and new district agreed to an extended time period.

Some of the “out of compliance” reasons provided by school districts exceeding the required timeline for 2,697 preschool and 1,473 school-age students were as follows:

- Shortages of personnel to conduct evaluations.
- Evaluator delays in completing the evaluations.
- Scheduling difficulties that cause untimely CPSE or CSE meetings.

**Extent of Delays**

Following is an analysis of the number of days past the timeline for completion of evaluations for preschool children. Some of these delays are for reasons determined to be "in compliance" while others have been determined to be "out of compliance". However, NYS did not collect data in such a way as to be able to differentiate between the two types of delays. NYS will be able to differentiate in the 2007-08 school year, when these data will be collected at the individual student level.

Discussion of 2006-07 Baseline Data

- The baseline data provided above indicates that significantly larger percentages of school-age students’ eligibility determinations are made within the required timeline compared to preschool children’s eligibility determinations. This is indicative of NYS’ shorter timeline for determining eligibility for preschool children.
- An analysis of the baseline data by SEQA region indicates that the overall rate for determination of eligibility within required timelines for preschool and school-age students combined is as follows from highest to lowest: Long Island: 75.8 percent; New York City: 66.0 percent; Western: 64.6 percent; Eastern: 59.5 percent; Hudson Valley: 58.6 percent; and Central: 53.1 percent.
- Of all the delays in evaluating preschool children, 35.4 percent were delays of 1-10 days; 27.4 percent were delays of 11 to 20 days; 17.1 percent were delays of 21 to 30 days; and 20.2 percent were delays of more than 30 days.
- Of all the delays in evaluating school-age students, 36.9 percent were delays of 1-10 days; 19.7 percent were delays of 11 to 20 days; 26.2 percent were delays of 21-30 days; and 17.3 percent were delays of more than 30 days.

<td>100 Percent of children with parental consent to evaluate will be evaluated within State required timelines.</td>
</tr>
</tbody>
</table>

*Beginning with reporting for this Indicator in the 2006-07 school year, USED guidance changed the criteria to address the timeline between receipt of parent consent to evaluate and the completion of the evaluation and dropped consideration of the timeline from parental consent for evaluation to eligibility determination.

**In FFY 2009, USED requested states to add two additional years to the SPP, including adding two additional years of targets.

Overview of the State Performance Plan Development

See *Overview of the State Performance Plan (SPP) Development* preceding Indicator 1. In addition, New York State (NYS) consulted with the New York City Department of Education (NYCDOE) to identify NYC specific issues and needed improvement activities.

**Monitoring Priority: Effective General Supervision Part B / Effective Transition**

**Indicator 12:** Percent of children referred by Part C prior to age 3, who are found eligible for Part B, and who have an individualized education program (IEP) developed and implemented by their third birthdays.

(20 U.S.C. 1416(a)(3)(B))

**Measurement:**

a. # of children who have been served in Part C and referred to Part B for eligibility determination. Students whose 3rd birthday occurs after August 31 following the full school year for which data are reported are excluded from this number.

b. # of those referred determined to be NOT eligible and whose eligibility was determined prior to their third birthdays.

c. # of those found eligible who have an IEP developed and implemented by their third birthday.

d. # of children for whom parent(s) refusal to provide consent caused delays in evaluation or initial services or to whom exceptions under 34 CFR §300.301(d) applied.

e. # of children who were referred to Part C less than 90 days before their third birthdays.*

f. # of children whose parent(s) chose to continue their child in Early Intervention (EI) Program**

g. # of children who moved, # of children who died, # of children who started receiving services on the recommended program’s beginning date, even though it was after the child’s third birthday**

* Note: (e) was added by the United States Education Department (USED) in March 2009.

**Note: In 2008-09, NYS added (f) and (g) to the measurement to be accurate and consistent with NYS requirements.

Account for children included in a, but not included in b, c, d, e, f or g. Indicate the range of days beyond the third birthday when eligibility was determined and the IEP developed and the reasons for the delays.

Percent = [(c) divided by (a – b – d – e- f - g)] times 100.
NYS' Baseline Calculation

NYS will compute its baseline data by including the following elements:
A. # of children who have been served in Part C and referred to Part B for eligibility determination.
B. # of those referred determined to be NOT eligible and whose eligibilities were determined prior to their third birthday.
C. # of those found eligible who have an IEP developed and implemented by their third birthday.
D. # of children for whom parent refusal to provide consent caused delays in eligibility determination or initial services.
E. # of children for whom delays in determination of eligibility or delays in implementing the IEP were caused by reasons that are "in compliance" with State requirements.

Baseline Data = [(C) divided by (A-B-D-E)] times 100

Data Source:

NYS now uses individual student data taken from the State data system. In 2005-06, the State collected aggregated data using form PD-9 from sampled schools. In 2006-07, NYS collected aggregated data using form PD-12. Beginning with the 2007-08 year, NYS collects student data for this indicator via the Student Information Repository System (SIRS) and verifies these data by displaying them in a VR12 report, which was developed in the PD Data System. SIRS is NYS' individual student data reporting system.

Overview of Issue/Description of System or Process

The Department of Health (DOH) under the Early Intervention Program (Part C) provides services to children with disabilities, birth to two. The State Education Department (SED) has responsibility for providing services to preschool children with disabilities, ages three to five (Part B).

The Memorandum of Understanding (MOU) between SED and DOH focuses on activities that will result in a smooth transition from Part C to Part B services for children beginning at age three. Early Intervention Officials (EIO) have responsibility under Public Health Law for notifying school districts (with parental consent) of an Early Intervention (EI) child's potential eligibility for services under preschool special education and for arranging a transition conference at least 120 days before the child is first eligible for preschool programs and services. A parent may also refer the child directly to the Committee on Preschool Special Education (CPSE). The transition conference is scheduled at least 90 days before the child is first eligible for preschool programs and services, and is attended by the EIO, the service coordinator, the parent(s) and the chairperson of the CPSE. The purpose of the transition conference is to decide whether the child should be referred to preschool special education for determination of eligibility, to review program options available to the child and family, and to develop a transition plan. This process ensures continuity of services for the
child. The timely referral and evaluation of children to preschool special education and the provision of a free appropriate public education (FAPE) in the LRE by school districts are reviewed under the Special Education Quality Assurance (SEQA) preschool focused monitoring review process.

The evaluation and eligibility determination of a preschool student must be made within 30 school days of receipt of the parent's consent to evaluation. The CPSE provides the parent with a list of approved programs that have a multidisciplinary evaluation component. The parent selects the approved evaluation program to conduct the individual evaluation of his or her child and the board of education arranges for the evaluation by the service provider selected by the parent. In addition, with the consent of the parents, approved evaluators and CPSEs must be provided with the most recent evaluation report for a child in transition from programs and services provided pursuant to title two-a of article 25 of the Public Health Law.

New York State Public Health Law, section 2541(8)(a) provides that a child’s eligibility for EI services ends as of his or her third birthday, unless the child has been referred to the CPSE and found eligible for preschool special education services before his or her third birthday. Under these provisions, parents may elect to either transition the child to preschool special education or continue their child in early intervention programming beyond the third birthday until either September or January, according to the following rules:

- If the child turns three years of age on or before the thirty-first day of August, the child shall, if requested by the parent, be eligible to receive early intervention services contained in an Individualized Family Service Plan (IFSP) until the first day of September of that calendar year; or,
- If the child turns three years of age on or after the first day of September, the child shall, if requested by the parent and if already receiving EI services, be eligible to continue receiving such services until the second day of January of the following calendar year.

When the parent elects to continue in EI under these provisions, the CPSE would write the IEP and indicate the starting date for special education services as of September or January, respectively. In no cases may the child receive EI and preschool special education services simultaneously.

Upon receipt of the recommendation of the CPSE, the board of education must arrange for the preschool student with a disability to receive such programs and services commencing with the July, September or January starting date for the approved program, unless such services are recommended by the CPSE less than 30 school days prior to, or after, the appropriate starting date selected for such preschool student, in which case, the IEP must be implemented no later than 30 school days from the recommendation of the CPSE.
Baseline Data for FFY 2005 (2005-06)

Plan to collect the data

SED developed a new form (PD-9) to collect data from a representative sample of school districts during the 2005-06 school year (July 1, 2005 to June 30, 2006) on the percent of children referred by Early Intervention (IDEA, Part C) prior to age three, who are found eligible for preschool programs and/or services under IDEA, Part B, and who have an IEP developed and implemented by their third birthday. NYS will use these data to identify noncompliance and establish corrective actions for those school districts in which the data indicates less than 100% of children referred by Part C prior to age 3, who are found eligible for Part B, have an IEP developed and implemented by their third birthday for noncompliant reasons.

To collect baseline data on the transition of children from early intervention (Part C of IDEA) to preschool special education programs and/or services (Part B of IDEA), the PD form will direct the school districts to report the following information:

- The numbers of children referred from Part C (Early Intervention) to Part B for preschool special education programs and/or services prior to the age of 3 who were found eligible and not eligible on or before age three and after the age of 3. Of this number, how many had their IEPs developed and implemented on or before the age of 3 and after the age of 3.
- The reasons for more referrals for evaluation than initial eligibility determinations (e.g., parents withdrew consent; student moved out of the district before the evaluation was completed; student awaiting an evaluation; other reasons).
- The reasons for delays in initial eligibility determinations (e.g., an approved evaluator was not available to provide the evaluation in a timely manner; the parents refused or repeatedly failed to make the child available for the evaluation; the parents canceled the scheduled evaluation and/or selected another approved evaluator; the child transferred to the district after the evaluation period began in a previous school district and the parents and district agreed to an extended time period to complete the evaluation; other reasons).
- The reasons for delays in developing and implementing children's IEPs prior to the children’s third birthday (e.g., parents chose to continue their child in the Early Intervention program after the child became age three; parents chose not to enroll their child in the recommended program; programs and/or services were not available; child moved out of the district prior to the child’s third birthday; other reason).
- The number of days of delay in developing and implementing IEPs by a preschool child's third birthday (1-10 days; 11-20 days; 21-30 days; more than 30 days).

Sampling Methodology

Sampling will be used to establish the 2005-06 baseline for this indicator. One-sixth of the school districts in NYS that are representative of the State will report data for this indicator annually until all school districts have reported these data over a six year
period. This represents approximately 120 school districts each year. The NYC School District will be included in the sample each year. It is the only school district in the State with a total enrollment of 50,000 or more students.

NYS has distributed all school districts among six statewide representative samples. These six groups of school districts were tested with Analysis of Variance (ANOVA) and there was no statistical difference among the six groups of school districts on the population variables described in Attachment 2.

For 2005-06 and 2006-07, school districts scheduled to report on Indicator 12, had a choice of reporting data on all eligible students for this indicator or submitting data on a randomly selected sample of minimum number of students using the sampling guidelines provided below.

<table>
<thead>
<tr>
<th>Federal Indicator Number</th>

<td>Use a sampling calculator. Require 95% confidence interval and plus or minus 2% margin of error.</td>
<td>Random selection using a random number table.</td>
<td>Documentation period is seven years. Maintain list of all eligible students, copy of Random Number Table used, beginning random number for selecting students and list of all students who were selected and their number.</td>
</tr>
</tbody>
</table>

NOTE: Beginning with reporting for 2007-08, the option of sampling students for Indicator 12 was discontinued. No districts scheduled to report on this indicator, except for New York City are permitted to sample students to report for this indicator. See Sampling Plan, Attachment 2.

**Baseline Data for 2005 (2005-06)**

86.5 percent of children who were referred from Part C to Part B for eligibility determination and services had their eligibility determination made and IEP implemented by their third birthday. This percentage includes children whose delays in eligibility determination or IEP implementation were for reasons that are in compliance with State requirements.
In the 2005-06 school year, 117 school districts that are representative of the State provided data to the State on the numbers of children who were receiving EI services for whom parents provided consent to evaluate for determination of eligibility for preschool special education programs or services under Part B of IDEA. Data were collected on the numbers of children found eligible and numbers of children found not eligible prior to their third birthday and on the numbers of IEPs developed and implemented prior to children’s third birthday. Data were also collected on the number of days past the children’s third birthday when the IEP was implemented and the reasons for the delays. Of the 117 school districts reporting data for this indicator, 116 provided information on all eligible children and 1 provided information on a sample of students.

The table below provides NYS' baseline data calculation for the 2005-06 school year.

*The federal calculation described in the measurement section of this indicator for NYS is as follows: \[
\frac{(C)}{(A-B-D)}*100 = 26.9\%
\]

Column D in the table above includes the following other reasons determined to be "in compliance" with State requirements for implementing the IEP past the child’s third birthday for children included in Column A above:
Parents chose to continue their children in EI and transition to preschool after the child became three years of age. (1172 children)

Parents chose not to enroll child in recommended program. (This is the same as parents did not provide consent for services.) (84 children)

Child moved from district prior to determination of eligibility or prior to IEP implementation by age 3. (16 children)

Parents refused or repeatedly did not make the child available for the evaluation. (158 children)

Parents canceled the scheduled evaluation and/or selected another site or approved evaluator. (21 children)

Children were referred to CPSE less than 30 days before their third birthday. (113 children)

Child transferred to a new district after the evaluation period began and parents and new district agreed to an extended time period. (2 children)

Eligibility determined within timelines but services to start opening of school which is past child’s third birthday. (4 children)

Some of the reasons provided by school districts for implementing the child’s IEP past the third birthday determined to be "out of compliance" with State requirements were as follows:

- Evaluator was not available or evaluator caused delays
- CPSE did not meet to determine eligibility in a timely manner
- Additional evaluations were needed than originally scheduled
- Scheduling difficulties
- Recommended Part B programs and/or services were not available when the child turned three years of age
- Still awaiting evaluations as of reporting date

**Number of Days past the Third Birthday When IEPs were Implemented:** Some of these children had delays for reasons that are “in compliance” with State requirements and some are for reasons that are considered to be “out of compliance” with State requirements. Data were not collected in such a way as to be able to distinguish between the two types of delays:

Of all the Children in Each SEQA Region Whose IEPs are Delayed (displayed in the table above), What Percentage are Delayed by the Number of Days:
## Discussion of Baseline Data

- All school districts that reported having less than 100% of children whose eligibility was not determined or whose IEPs were not implemented by their third birthday according by NYS’ formula for baseline calculation for this indicator will be required to take actions to improve their compliance rates and report improvement to the State.
- NYS will modify its data collection instrument for the 2006-07 school year such that we will be able to compute a compliance rate based on all students referred from EI to preschool more precisely.
- NYS is working towards being able to collect these data at the student level in such a way as to determine the student specific reasons for delays in eligibility determinations and IEP implementation.
- School districts reported large numbers of children whose parents opted to continue receiving services in EI until after the child turned three years of age.
- Based on NYS' baseline calculation, the Central SEQA region had the lowest percentage of children who had timely determinations of eligibility and IEPs implemented by children’s third birthday (59.3%). The Eastern region had the largest such percentage (96.5%).
- NYC reported the greatest percentage of children who experienced the longest delays (more than 30 days) in receiving services (84.6%) compared to other regions.
- School districts reported that most of the delays in implementing IEPs were for reasons that are “in compliance” with State requirements.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1. In addition to the plan development activities described previously, the Department sought the input on data collection for this indicator with the transition subcommittee of the Commissioner's Advisory Panel for Special Education Services (CAP), representatives of the Transition Coordination Sites (TCS) and representatives of the Employment and Disability Institute of Cornell University working on TransQUAL Online, a tool to support school district teams to improve their practices in career development and transition.

New York State (NYS) consulted with CAP to establish the new baseline and improvement activities for Indicator 13 reported in February 2011. The State's technical assistance and support networks were also involved in these discussions.

Monitoring Priority: Effective General Supervision Part B / Effective Transition

Indicator 13:

*Indicator definition used through school year 2008-09:*
Percent of youth aged 15* and above with an individualized education program (IEP) that includes coordinated, measurable, annual IEP goals and transition services that will reasonably enable the student to meet the post-secondary goals.

*Beginning with the 2009-10 school year, this Indicator is defined as follows:*
Percent of youth with IEPs aged 15* and above with an IEP that includes appropriate measurable post-secondary goals that are annually updated and based upon an age-appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those post-secondary goals, and annual IEP goals related to the student’s transition services needs. There also must be evidence that the student was invited to the IEP Team meeting where transition services are to be discussed and evidence that, if appropriate, a representative of any participating agency was invited to the IEP Team meeting with the prior consent of the parent or student who has reached the age of majority.

(20 U.S.C. 1416(a)(3)(B))

* Note: While federal regulations require transition planning to begin with the first IEP to be in effect at age 16, NYS law requires transition planning on a student’s IEP beginning with the IEP in effect when the student turns age 15. In NYS, the IEP Team is the Committee on Special Education (CSE).
Measurement used through school year 2008-09:

Percent = # of youth with disabilities aged 15 and above with an IEP that includes coordinated, measurable, annual IEP goals and transition services that will reasonably enable the student to meet the post-secondary goals divided by the # of youth with an IEP age 15 and above times 100.

Measurement used as of school year 2009-10:

Percent = [(# of youth with IEPs aged 15 and above with an IEP that includes appropriate measurable post-secondary goals that are annually updated and based upon an age-appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those post-secondary goals, and annual IEP goals related to the student's transition services needs. There also must be evidence that the student was invited to the CSE meeting where transition services are to be discussed and evidence that, if appropriate, a representative of any participating agency was invited to the CSE meeting with the prior consent of the parent or student who has reached the age of majority) divided by the (# of youth with an IEP age 15 and above)] times 100.

Data Source:

NYS uses data taken from State monitoring, as described below.

Overview of Issue/Description of System or Process

State law and regulations define transition services to mean a coordinated set of activities for a student with a disability, designed within a results-oriented process that is focused on improving the academic and functional achievement of the student with a disability to facilitate the student’s movement from school to post-school activities, including, but not limited to, post-secondary education, vocational education, integrated competitive employment (including supported employment), continuing and adult education, adult services, independent living, or community participation. The coordinated set of activities must be based on the individual student's needs, taking into account the student's strengths, preferences and interests, and must include needed activities in instruction; related services; community experiences; the development of employment and other post-school adult living objectives; and when appropriate, acquisition of daily living skills and functional vocational evaluation.

When the purpose of an IEP meeting is to consider transition services, the meeting notice must indicate this purpose, indicate that the school district/agency will invite the student to participate in the meeting; and identify any other agency that will be invited to send a representative.

In NYS, transition services must be in a student's IEP beginning not later than the first IEP to be in effect when the student is age 15 (and at a younger age, if determined
appropriate), and updated annually. The IEP must, under the applicable components of the student's IEP, include:

- under the student's present levels of performance, a statement of the student's needs, taking into account the student's strengths, preferences and interests, as they relate to transition from school to post-school activities;
- appropriate measurable post-secondary goals based upon age appropriate transition assessments relating to training, education, employment and, where appropriate, independent living skills;
- annual IEP goals related to the student's transition services needs;
- statement of the transition service needs of the student that focuses on the student's courses of study, such as participation in advanced placement courses or a vocational education program;
- needed activities to facilitate the student's movement from school to post-school activities, including instruction, related services, community experiences, the development of employment and other post-school adult living objectives and, when appropriate, acquisition of daily living skills and functional vocational evaluation; and
- a statement of the responsibilities of the school district and, when applicable, participating agencies for the provision of such services and activities that promote movement from school to post-school opportunities, or both, before the student leaves the school setting.

The Office of Vocational and Educational Services for Individuals with Disabilities' (VESID) Strategic Plan Goals, Key Performance Indicators and Targets (June 2004, revised October 2004) included the Key Performance Indicator, “Individualized Education Program (IEP) with transition goals, objectives and services for students with disabilities.”

Plan to collect baseline data

NYS will collect data from a statewide representative sample of school districts on this indicator and use a monitoring protocol to select and review the IEPs in the representative sample of school districts. Over a six-year period beginning with the 2005-06 school year, all school districts will provide data on this indicator.

Sampling Methodology

NYS has distributed all school districts among six statewide representative samples. These six groups of school districts were tested with Analysis of Variance (ANOVA) and there was no statistical difference among the six groups of school districts on the population variables described in Attachment 2. These population variables were from the 2000 decennial census. New York City is the only school district in the State with a total enrollment of 50,000 or more students, so it will be represented in each of the six samples.
By January 2006, the State Education Department (SED) will notify the selected sample districts that they must conduct a self-review of a randomly selected sample of IEPs of all students with disabilities ages 15-21.

<table>
<thead>
<tr>
<th>Federal Indicator Number</th>
<th>Eligible Population of Students From Which A Random Sample Must be Selected</th>
<th>Minimum Number of Students in the Sample</th>
<th>Method for Selecting Students</th>
<th>Required Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>13</td>
<td>All students with disabilities ages 15-21 who are provided special education services in district-operated programs or under contract with other service providers.</td>
<td>All students up to 30 eligible students. NYC samples 100 students.</td>
<td>Random selection using a random number table</td>
<td>Documentation period is seven years. Maintain list of all eligible students, copy of Random Number Table used, beginning random number for selecting students and list of all students who were selected and their number</td>
</tr>
</tbody>
</table>

A school district may choose to review additional IEPs above the minimum number in order to improve the confidence with which results can be generalized to the entire population especially when there is wide variation in the results. In some cases, the State may require the review of additional IEPs.

SED will require that school districts maintain documentation as described above if they choose to report data on a sample of students. The totally random sampling methodology and required documentation should eliminate selection bias. The State will attempt to prevent missing data by first describing precisely what SED needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection will improve after the first year and will continue to improve as long as requirements remain unchanged. All issues of confidentiality will be handled in accordance with the rules and procedures in FERPA. SED will also guard against divulging personally identifiable information by not reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.

### IEP Review Process

By February 2006, SED will provide an “IEP/Transition Self-Review” monitoring protocol to all school districts. The school districts selected for the representative sample will be directed to complete the “Transition IEP” self-review monitoring protocol on a representative sample of IEPs and document results on a form prescribed by SED. The
form will require documentation of the percent of students whose IEPs met each of the compliance requirements on the monitoring protocol. The State is exploring the development of an on-line reporting system (e.g., an adaptation of the TransQUAL Online system) through which school districts would be required to submit the aggregate results of the self-review. SED will arrange for professional development on the self-review protocol and TransQUAL Online system through TCS and SETRC. Training will be ongoing in subsequent years, as needed.

Districts will be directed to complete and enter data on their IEP reviews by August 31. SED will arrange for random verification reviews of reported data in school districts in each Special Education Quality Assurance (SEQA) region. All school districts identified through the self-review or verification process as not having IEPs that include appropriate documentation of post-secondary goals and transition services on a student's IEP will be directed to correct the noncompliance as soon as possible, but no later than one year from the date of identification.

The review of IEPs required a determination as to whether the IEPs in the sample selected included specific transition content information and whether the content of the IEP would reasonably enable the student to meet measurable post-secondary goals. A qualitative review of the IEPs around the following eight components was conducted:

- Students actively participate in planning their educational programs leading toward achievement of post-secondary goals.
- IEPs are individualized and are based on the assessment information about the student's, including individual needs, preferences, interests and strengths of the students.
- Transition needs identified in the students' assessment information are included in the students' present levels of performance.
- Annual goals address students' transition needs identified in the present levels of performance and are calculated to help each student progress incrementally toward the attainment of the post-secondary goals.
- The recommended special education programs and services will assist the students to meet their annual goals relating to transition.
- The statements of needed transition services are developed in consideration of the students' needs, preferences and interests, are directly related to the students' goals beyond secondary education and will assist the students to reach their post-secondary goals.
- Courses of student are linked to attainment of the students' post-secondary goals.
- The school district and appropriate participating agencies coordinate their activities in support of the students' attainment of post-secondary goals.

**Baseline Data for FFY 2005 (2005-06)**

During FFY 2005, **33.3 percent** of youth, ages 15 and above, had IEPs that included coordinated, measurable annual IEP goals and transition services to reasonably enable them to meet their post-secondary goals.
Discussion of FFY 2005 Baseline Data

The 2005 baseline data is based on the monitoring review of IEPs from a representative sample of 108 school districts, including New York City (NYC). The total number of students with IEPs, ages 15-21 in NYS during the 2005-06 school year was 54,780. The total number of IEPs reviewed from these representative school districts was 3,541. Of the 3,541 IEPs, 1,176 were found to have been in compliance with all IEP transition requirements.

Of the 108 school districts:
- 43 school districts reported that 0 percent of their student's IEPs that were reviewed met compliance with the IEP transition requirements.
- 34 school districts reported between 1 and 49 percent of their students' IEPs that were reviewed met the transition requirements.
- 12 school districts reported between 50 and 79 percent of their IEPs that were reviewed met the transition requirements.
- 19 percent reported between 80 and 100 percent of IEPs that were reviewed met the transition requirements.

Regional variations are noted in the following chart. NYC, from which nearly one third of the students with disabilities are educated, reported that none of their IEPs met all of the compliance indicators.

Technical assistance personnel from SED’s funded TCSs and/or SETRC facilitated the reviews of most of the school districts compliance with this indicator. This served as part of the verification process and afforded districts technical assistance during the compliance review. In most cases it was indicated that districts are often providing appropriate transition programs and services but not accurately documenting this information on the students' IEPs.
Data for each of the eight compliance indicators is reported in the chart below. Major findings include:

- 23 percent of districts reported compliance with the requirement for measurable post-secondary goals. This is a new requirement for school districts (IDEA 2004).
- 24 percent reported compliance with documenting a student's transition needs under the IEP section "present levels of performance." However, TCS and SETRC staff participating in these reviews reported that district staff were generally able to orally describe the student's needs, but often failed to accurately capture those needs in writing in the IEPs.
- More than 70 percent of school districts were in compliance with the requirement to document recommended special education programs and services.
- More than 57 percent of the school districts invited and/or otherwise provided for the student's participation in the transition planning process.

**New Baseline Data for FFY 2009 (2009-10)**

Federal changes in the definition of the indicator in March 2009 necessitated resetting a new baseline. Data reported for the 2009-10 school year below are the State’s new baseline data; they cannot be compared to prior years’ data.

During FFY 2009, **67.2 percent** of youth, ages 15 and above, had IEPs that included appropriate measurable post-secondary goals that are annually updated and based upon an age-appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those post-secondary goals, and annual IEP goals related to the student’s transition services needs.

**Discussion of FFY 2009 Baseline Data**

The FFY 2009 baseline data is based on the monitoring review of IEPs from a representative sample of 107 school districts, including NYC. Districts used a State-developed self-review monitoring protocol to review a sample of IEPs of students with disabilities aged 15 and above to determine if each IEP is in compliance with all transition planning requirements. The self-review monitoring protocol is posted at [http://www.p12.nysed.gov/specialed/spp/13selfreview-410.pdf](http://www.p12.nysed.gov/specialed/spp/13selfreview-410.pdf). The total number of students with IEPs, ages 15-21, from districts sampled during 2009-10 was 58,055. The total number of IEPs reviewed from these representative school districts was 3,321. Of the IEPs reviewed, 2,232 were found to have been in compliance with all IEP transition requirements.

Of the 107 school districts:

- 16 school districts (15 percent of the 107 school districts) reported that 0 percent of their student's IEPs that were reviewed met compliance with the IEP transition requirements.
- 15 school districts (14 percent of the 107 school districts) reported between one (1) and 49 percent of the students' IEPs that were reviewed met the transition requirements.
15 school districts (14 percent of the 107 school districts) reported between 50 and 79 percent of their IEPs that were reviewed met the transition requirements.

22 school districts (20.6 percent of the 107 school districts) reported between 80 and 99 percent of IEPs that were reviewed met the transition requirements.

39 school districts (36.4 percent of the 107 school districts) reported 100 percent of IEPs that were reviewed were in compliance with all transition planning requirements.

**Regional variations are noted in the following chart.** While the majority of school districts in each region of the State reported a compliance rate of between 80 to 100 percent, two regions of the State were an exception: In the Western region only one school district had a compliance rate in this range and in NYC the compliance rate was 25 percent.

*Regional Special Education Technical Assistance Support Centers

School districts that reported any IEP not in full compliance with all requirements were required to immediately correct those IEPs and provide an assurance of correction of noncompliance to SED, which was verified by the State’s monitoring staff.
Also, school districts that reported less than 100 percent of IEPs in full compliance with all requirements were issued findings in 2010. School districts are required to correct these findings as soon as possible but no later than within 12 months from notification and report an assurance of correction of noncompliance to SED. These corrections are also verified by the State’s monitoring staff. NYS will report on the correction of noncompliance identified during FFY 2009 in the February 2012 APR.

Comparative analysis of high school experiences of the class of 2001 in relation to their post-school outcomes indicate that the combined presence during the student’s K-12 educational program of helpful transition planning, early planning, provision of career and postsecondary information, participation by students and families, integration, academic achievement and a safe educational environment are significant.</td>

Overview of the State Performance Plan Development:

See Overview of the State Performance Plan (SPP) Development in the Introduction to the State Performance Plan. In addition to the plan development activities described there, input on data collection for this indicator was sought from Commissioner's Advisory Panel for Special Education Services (CAP) and representatives of the Regional Special Education Technical Assistance Support Centers (RSE-TASC).

**Monitoring Priority: Effective General Supervision Part B / Effective Transition**

**Indicator 14:**

*Indicator definition used for students exiting through school year 2007-08:*

Percent of youth who had individualized education programs (IEPs), are no longer in secondary school and who have been competitively employed, enrolled in some type of postsecondary school, or both, within one year of leaving high school.

*For school students exiting beginning with the 2008-09 school year and thereafter, this Indicator is defined as:*

Percent of youth who are no longer in secondary school, had IEPs in effect at the time they left school, and were:

A. Enrolled in higher education within one year of leaving high school.
B. Enrolled in higher education or competitively employed within one year of leaving high school.
C. Enrolled in higher education or some other postsecondary education or training program; or competitively employed or in some other employment within one year of leaving high school.

(20 U.S.C. 1416(a)(3)(B))

Note: Because of the change in definition in March 2009, the United States Education Department (USED) did not require reporting in the February 2010 APR for the 2008-09 school year, although New York State (NYS) completed the data collection and will report individual school district data using the prior definition.

**Measurement used for students exiting through school year 2007-08:**

Percent = [(# of youth who had IEPs, are no longer in secondary school and who have been competitively employed, enrolled in some type of postsecondary school, or both, within one year of leaving high school) divided by the (# of youth assessed who had IEPs and are no longer in secondary school)] times 100.

**Measurement used for students exiting beginning with the 2008-09 school year and thereafter:**

A. Percent enrolled in higher education = [(# of youth who are no longer in secondary school, had IEPs in effect at the time they left school and were enrolled in higher education)] / [(# of youth who were not enrolled in higher education and had IEPs at the time they left school)] times 100.
education within one year of leaving high school) divided by the (# of respondent youth who are no longer in secondary school and had IEPs in effect at the time they left school] times 100.

B. Percent enrolled in higher education or competitively employed within one year of leaving high school = [(# of youth who are no longer in secondary school, had IEPs in effect at the time they left school and were enrolled in higher education or competitively employed within one year of leaving high school) divided by the (# of respondent youth who are no longer in secondary school and had IEPs in effect at the time they left school)] times 100.

C. Percent enrolled in higher education, or in some other postsecondary education or training program; or competitively employed or in some other employment = [(# of youth who are no longer in secondary school, had IEPs in effect at the time they left school and were enrolled in higher education, or in some other postsecondary education or training program; or competitively employed or in some other employment) divided by the (# of respondent youth who are no longer in secondary school and had IEPs in effect at the time they left school)] times 100.

Overview of Issue/Description of System or Process:

From 2000 through 2007, NYS independently conducted a seven year study to collect post-school outcome data from special and general education Exiters. Stratified random samples of 13,000 special and general education students were followed since they were seniors in 2000 and 2001, with data collected during the senior year and at one-, three- and five-years beyond high school exit. The NYS LPSI found that, at one year beyond high school exit, 83 percent of the Class of 2001 completers had successfully transitioned to employment, postsecondary education and/or day program alternatives as compared to 96 percent of general education students who left the same high schools at the same time. Thus, NYS students with disabilities experienced a gap in post-school outcomes of approximately 13 percentage points as compared with their general education peers. However, 75 percent of an earlier group of students with disabilities from the senior class of 1995 at one-year had positive post-school transitions. The LPSI showed that over six years, successful post-school transitions for students with disabilities had climbed 8 percentage points, an improvement resulting from statewide technical assistance, such as provided by the TCS technical assistance centers.

2 Day program alternatives are adult rehabilitation service programs designed for persons with the most severe disabilities who cannot successfully compete in the competitive labor market or matriculate in traditional postsecondary education settings even with extensive support. Services provided in these day program alternatives typically involve provision of developmental therapies to improve daily living, independent living, and social skills and to provide prevocational training. Placement in these settings is not necessarily an end-placement. As individuals acquire more skills and new systems for providing support evolve, participants may transition full- or part-time into other more integrated settings, including supported employment or supported postsecondary education models. Inclusion of this outcome in NYS’ definition of postsecondary school was highly recommended by the CAP to assure that students with the most severe disabilities are included in NYS’ transition services. Such outcomes will be applied to the new criterion C, included as “other training program or employment.”
Note that the NYS LPSI used a slightly different criterion for successful post-school transition. While the SPP measure for Exiters through 2007-08 represents those “engaged at any time” during the post-school year, the LPSI used the criterion of the person being engaged at the point of interview one year out of school. If the federal SPP criterion were applied to the LPSI study data, the rate for all students would have been higher. This difference has implications for understanding the SPP results and improvement planning.

Plan to collect baseline data for 2005-06

Under the SPP requirements, baseline data was collected by interviewing students with disabilities exiting a representative sample of one-sixth of NYS school districts in 2005-06. A short interview protocol was designed to determine post-school transition status in areas of competitive employment and/or enrollment in post-secondary schools.

Definitions

*Exiters* are defined to include those students with disabilities who had IEPs and who completed the high school program with any diploma or certificate of completion (i.e., Regents or local diploma, IEP diploma, high school equivalency diploma), who completed school by reaching the maximum age to attend special education or those dropping out during the academic year being reviewed.

*Enrolled in higher education* means youth have been enrolled on a full- or part-time basis in a community college (two-year program) or college/university (four or more year program) that meets the definition of “Institution of Higher Education” in the Higher Education Act (HEA), for at least one complete term, at anytime in the year since leaving high school: (a) in an educational program to earn a degree or other recognized credential; OR (b) in a training program that lasts at least one academic year to prepare for gainful employment in a recognized occupation.

*Competitive employment* means that youth have worked for pay at or above the minimum wage in a setting with others who are nondisabled for a period of 20 hours a week for at least 90 days at any time in the year since leaving high school. This includes military employment.

*Enrolled in other postsecondary education or training* means youth have been enrolled on a full- or part-time basis for at least one complete term at any time in the year since leaving high school in an education or training program (e.g., Job Corps; adult education; workforce development program; adult rehabilitation service programs; or other). Part-time is defined differently depending on the standard for the post-secondary school program. For colleges, part-time course loads typically are defined as less than nine credit hours per semester. Each person interviewed responds based on their understanding of what constitutes full- or part time for the institution or program they are attending. Interviewers are trained to provide guidance if requested or needed.

*Some other employment* means youth have worked for pay or been self-employed for a period of at least 90 days at any time in the year since leaving high school. This
includes working in a family business (e.g., farm, store, fishing, ranching, catering services, etc.)

Plan to collect baseline data for 2008-09

Same as above except that:

*Enrolled in higher education* has been redefined to mean youth have been enrolled on a full- or part-time basis in a community college (two-year program) or college/university (four or more year program) for at least one complete term, at any time in the year since leaving high school.

*Enrolled in other postsecondary education or training* also includes enrollment on a full- or part-time basis for at least one complete term at any time of the year since leaving high school in a vocational technical school that is less than a two-year program.

NYS continues to use a contractor to collect data for this indicator. The current contractor is Potsdam Institute for Applied Research (PIAR) at the State University in Potsdam, NY. The schedule for collection of baseline data for 2008-09 school year cohort was as follows:

- By April 2009, districts were required to provide PIAR with student-specific contact and demographic information for students who left school between July 1 and December 31, 2008. This group was designated as “Semester 1 Exiters.”
- By August 2009, districts were required to provide PIAR with student-specific contact and demographic information for students who left school between January 1 and June 30, 2009. This group was designated as “Semester 2 Exiters.”

When possible, interviews with each identified Exiter were conducted by telephone, but the survey was available on the web and in hard copy by mail. Interviews were attempted between March 8 through April 19, 2010 for Semester 1 Exiters. The major interviewing period was between June 2 through September 30, 2010. All remaining Exiters were included in this second round of interviews. Although the second round of interviewing started on June 2nd, no one was contacted for an interview until 12 months had passed since their reported Date of School Exit.

Districts submitted information on Exiters and sent out a notification/consent letter. Exiters who withdrew consent or for whom the district had no current contact information (letters were returned as undeliverable and the phone numbers on record did not work) were taken out of the survey pool. With these Exiters excluded, 3,820 Exiters were included in the survey pool. Of these targeted 3,820 students from 109 school districts (NYC counts as one district), 2,041 were available for interview, for a response rate of 53 percent.
Sampling was used to establish the 2005-06 baseline for this indicator. One-sixth of the school districts reported data on this indicator in 2005-06. A different sample group of school districts will report in subsequent school years until all school districts report data on this indicator over the first six years of the SPP. When each school district has reported once, the cycle will begin again in the same order. This represents approximately 110 school districts each year. The NYC School District will be included in the sample group each year. It is the only school district in NYS with a total enrollment of 50,000 or more students.

Because Indicator 14 data collection takes two years (the first year to identify school Exiters and the second year to conduct one-year out interviews), two samples will be identified in the fifth year to enable interview data to be collected during the sixth year, analyzed and reported for every district before the SPP expires. (See Attachment 2 to the SPP as revised June 2007)

NYS distributed all school districts among six statewide representative samples. These six groups of school districts were tested with Analysis of Variance (ANOVA) and there was no statistical difference among the six groups of school districts on the population variables described in Attachment 2 to the SPP as revised June 2007. These population variables were from the 2000 decennial census.

For Indicator 14 for school years 2005-06 and 2006-07, school districts with over 100 Exiters had a choice of reporting data on all Exiters or submitting data on a randomly selected representative sample of Exiters. The minimum number of students required for sampling under this indicator was obtained by using the sampling calculator provided by the State (http://www.p12.nysed.gov/sedcar/randomno.htm) and the guidelines provided below. The vast majority of school districts will need to submit data on all Exiters for this indicator. For a few large school districts, finding it less burdensome to report on a sample of students, the methodology described below (totally random sampling) was determined likely to produce a sample that is representative of the school district in terms of all variables, since every exiting student has the same chance as another student to be selected for the sample.

The State Education Department (SED) requires that school districts maintain documentation as described below if they chose to report data on a sample of students. The totally random sampling methodology and required documentation would eliminate selection bias. SED will attempt to prevent missing data by first describing precisely what the State needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection will improve after the first year and will continue to improve as long as requirements remain unchanged. All issues of confidentiality are addressed by following procedures in accordance with FERPA. SED will also guard against divulging personally identifiable information by not publicly reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.
Part B State Performance Plan (SPP) for 2005-2010
New York State
Revised August 2012

<table>
<thead>
<tr>
<th>Federal Indicator Number</th>
<th>Eligible Population of Students From Which A Random Sample Must be Selected</th>
<th>Minimum Number of Students in the Sample</th>
<th>Method for Selecting Students</th>
<th>Required Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>14</td>
<td>All students with disabilities who are no longer in secondary school but received some special education service during the school year (July 1-June 30) in district-operated programs or under contract with other service provider. (Include all students who left with a credential, reached maximum age for educational services or dropped out.)</td>
<td>School districts with less than 100 students with disabilities exiting, survey all students. School districts with 100 or more students use the sampling calculator. Require 95% confidence interval and plus or minus 5% margin of error.</td>
<td>If less than 100 Exiters, survey all students. For larger districts, use random selection using a random number table.</td>
<td>Documentation period is seven years. Maintain list of all eligible students, copy of Random Number Table used, beginning random number for selecting students and of all students who were selected their number.</td>
</tr>
</tbody>
</table>

NOTE: Beginning with reporting for 2007-08 Exiters, the option of sampling students for Indicator 14 was discontinued. No districts scheduled to report on this indicator, except for NYC, are permitted to sample students to report for this indicator. See Sampling Plan, Attachment 2.

Establishing the Baseline Sample for 2005-06

- By January 2006, school districts selected for this indicator for the 2005-06 reporting year were notified by SED that they must obtain contact information and consent to be contacted from all or their sample of students who left secondary school between the months of January to June 2006. The shorter period for the baseline cycle was used because this was the earliest that schools could reasonably be expected to be implement the process created under the first submission of the SPP in December 2005. School districts provided demographic and contact data for these students to the contractor, the Potsdam Institute for Applied Research (PIAR) at SUNY Potsdam. Demographic data included name of the school district and student identification, date of birth, year of exit, primary disability, gender, race/ethnicity information, type of school exit (e.g., graduation, drop out, aging out) and special education placement during the student’s last year of school participation.

- By September 2006, school districts submitted the contact and demographic information to PIAR, who verified completeness of information with school districts and initiated planning for interviewing, via a calling center and creating mail and online survey alternatives. Survey protocols were programmed and interviewer training
was designed. Recruitment of interviewers anticipated addressing the multi-lingual needs of former students as identified in the student information provided to PIAR.

- In mid-March 2007, PIAR sent letters to the entire survey pool of 2,936 former students to remind them of the purpose of the future call. If contact information failed to reach the former student, PIAR followed up with the school district to seek additional contact information. Most districts except NYC were able to provide additional contact information. PIAR also used web searches of on-line directories and databases to search for alternative addresses to supplement the outreach process.

- From April through the end of July 2007, interviews were conducted by PIAR using a modified form of the National Post-School Outcomes Center Post-School Data Collection Protocol, involving twelve basic questions plus one qualitative question regarding connections to adult services and supports. Call Center hours included early morning through evening hours, seven days per week, except holidays. English and Spanish-speaking interviewers were available. A maximum of 20 calls per former student was made, varied across time-of-day and day-of-week.

- Questions pertaining to employment and postsecondary education include the following:

<table>
<thead>
<tr>
<th>Employment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The level of employment, from working in a competitive employment setting for pay to supported employment.</td>
</tr>
<tr>
<td>2. If employed at all during the previous year.</td>
</tr>
<tr>
<td>3. If currently employed.</td>
</tr>
<tr>
<td>4. Hours worked per week.</td>
</tr>
<tr>
<td>5. Typical hourly wage received.</td>
</tr>
<tr>
<td>6. If the job provides health insurance benefits (an indicator of the stability of the level of engagement in the world of work).</td>
</tr>
<tr>
<td>7. If not employed, why?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Postsecondary Education</th>
</tr>
</thead>
<tbody>
<tr>
<td>8. The level of postsecondary education (from 4-year college program to Adult Basic Education).</td>
</tr>
<tr>
<td>9. If ever participated in postsecondary education.</td>
</tr>
<tr>
<td>10. If currently involved in postsecondary education.</td>
</tr>
<tr>
<td>11. Whether enrolled full or part time.</td>
</tr>
<tr>
<td>12. If not engaged in postsecondary education, why?</td>
</tr>
</tbody>
</table>

Awareness of and engagement with vocational rehabilitation and related adult services.
• Final reports to NYSED were provided by the end of September beginning in 2007 as they will be in each subsequent year, including all responses as well as analyses of response rates and differential outcomes by school, location (Big Five City vs. Rest of State), major demographic characteristics and type of school exit.

Future cycles of collecting the data will follow a similar schedule and process, with two exceptions. In subsequent annual data collections, beginning 2006-07, Exiters from the complete school year September to June will be included. Secondly, to increase response rates from larger districts, beginning with the 2008-09 student Exiters, sampling will be discontinued for all districts except NYC.

Because Indicator 14 data collection takes two years (the first year to identify school Exiters and the second year to conduct one-year out interviews), two samples will be identified in the fifth year (2009-10 SY) to enable interview data to be collected during the sixth year, analyzed and reported for every district before the SPP expires. (See Attachment 2 to the SPP as revised June 2007)

Baseline Data for FFY 2005 (2005-06)

Out of a targeted 2,917 student Exiters from 107 school districts (NYC counts as one district), 1,908 students were available for interview, for a response rate of 65 percent. 92 percent of those who were interviewed reported being in post secondary school and/or competitive employment at some point during the year after exiting high school in 2005-06. The post-school status of the 1,009 former students who could not be reached for interview is unknown.

Discussion of FFY 2005 Baseline Data:

Representativeness of FFY 2005 Survey Pool
Table 1 addresses the representativeness of the survey pool compared with all Exiters for 2005-06. The survey pool is the group of students that school districts identified to PIAR to be interviewed. The NPSO recommends using a +/-3 percent difference to judge the representativeness of demographic subgroups reported in Table 1. Using this
criterion, the survey pool is representative of disability subgroups and gender. Minority students and students who dropped out of school are under represented at -15.9 percent and -14.8 percent, respectively. Similar analysis of representation by geographic region showed that for the Big Five Cities included in the sample, only students who dropped out are under represented at -8.6 percent. For the Rest-of-State, students who dropped out are under represented at -10.2 percent and minority students are slightly under represented at -4.7 percent.

Two factors are believed to contribute to these differences in representation:

1. The PD-5 report represents Exiters for the entire school year, but the 2005-06 survey pool represents Exiters from the second half of the year. Dropping out is believed to more often occur during the first semester.

2. The consent process influences the composition of the survey pool. The consent process requires school districts to contact Exiters and their families to inform them about Indicator 14, to obtain contact information and to expect to be interviewed a year after leaving school. If a district cannot contact Exiters or their families or if there is a refusal of consent, the person is removed from the survey pool. Most often, these students have left by dropping out or have less stable living situations.

Representativeness of FFY 2005 Response Pool

Table 2 addresses the representativeness of the response pool, compared with the PD-5 report about all Exiters. The response pool is comprised of the students from the survey pool who actually were interviewed and who fit the criteria of being Exiters after one year. Using the PSO criteria of +/-3 percent to judge representativeness of subgroups, the response pool is representative of gender and all but one disability group. Exiters with emotional disabilities are slightly under represented at -4.5 percent. Minority and students and students who dropped out of school are under represented at -22.7 percent and -20.5 percent respectively. For the Big Five Cities, the response pool is representative of gender, minority and all but one disability subgroup. Exiters with emotional disabilities are slightly under represented at -4.1 percent. Students who dropped out of school are under represented at -18.2 percent. For the Rest-of-State, students who dropped out and minority students are under represented at -13.8 percent and -8.9 percent, respectively. Students with emotional disabilities are slightly under represented at -3.5 percent. The factors contributing to under representation by these groups include their under representation in the survey pool and having lower response rates.
Table 2: Representativeness of FFY 2005 Response Pool Compared to Total Exiters for All NYS Schools During 2005-06, as reported in PD-5 Data Reports

</table>

Difference: 1.4% -4.5% -0.7% 3.8% 0.1% -22.7% -20.5%

Response Rates for the FFY 2005 Baseline
- Within the survey pool, the response rates for three demographic subgroups were less than 65 percent: students with emotional disabilities at 55 percent; minority students at 50 percent; and students who dropped out of school at 42 percent.
- For the Big Five Cities, the response rate was 52 percent, with two groups falling below this rate: students with emotional disabilities at 45 percent and students who dropped out of school at 39 percent.
- For the Rest-of-State, there was a response rate of 69 percent, with three groups falling below this rate: students with emotional disabilities at 58 percent; minority students at 49 percent; and students who dropped out at 45 percent.

Implications for Interpreting and Applying the FFY 2005 Data

In reviewing the data results, readers are cautioned that the percent of former students with positive post-school outcomes is not representative of students who dropped out of school, minority students and students with emotional disabilities since these subgroups were underrepresented in student responses to the survey interviews.

Data Reliability and Validity for FFY 2005

Strategies are needed to equalize the response rates between the largest school districts and the rest of the participating schools that provide data for this indicator. Outreach activities need to be enhanced to find students who dropped out and assure their representation in the data. Strategies for improving response rates and representativeness for this indicator are discussed under the Improvement Activities/Timelines/Resources section.

Major Findings from FFY 2005 Baseline
- 92 percent of the 1,908 interviewed 2005-06 exiting students with disabilities reported that they participated in competitive employment and/or post secondary school enrollment at some point during the year since they left high school.
- If military service is counted as “competitive employment,” the percent of students with positive post-school transitions would be 1.3 percent higher (n=25), or 93 percent.
Based on past post-school studies, we believe that “employed and/or in post secondary school at the point of interview one-year beyond high school exit” is a better measure and may include some indication of sustaining positive post-school outcomes.

- Using this criterion, the percent of former students achieving positive post-school outcomes would be only 84 percent, distributed as follows: 24 percent in post secondary school only; 30 percent both working competitively and in post secondary school, and 30 percent in competitive employment only.
- Also using this criterion, there are 15 percent fewer former students sustaining themselves in employment and nine percent fewer former students sustaining their participation in post secondary school programs. (Note: there is some double counting here, because some students were doing both activities and some were only doing one).
- Only half of the former students not sustaining their participation in competitive employment or post secondary schools had heard of vocational rehabilitation services and, of these, only one third were using them. This means that sustaining post-school transitions also represents an area for improvement and that stronger alliances between schools and adult service agencies are needed to effect smooth transitions that are sustained beyond immediate school exit.

- Of the 1,200 former students who participated in post secondary school at any point during the year since leaving school, 883 (73.6 percent) participated in two-year college programs (47.1 percent) or four-year college programs (26.5 percent). Seven out of every 8 students participating in college programs participated full-time.

- Of the 1,429 former students who worked competitively at any time within one year of leaving school, 577 were found on interview to be still employed one year later and not attending post secondary school. Of this group, for whom employment is the primary activity, two-thirds work full-time, with the majority working 40 hours per week. The average wage for all 577 former students was $8.90 per hour and the average hours worked was 35.7 hours per week.

- **Type of school exit:** While 96 percent of students with regular diplomas transitioned to post-secondary school and/or competitive employment at some point during the year after school exit, only 84 percent of students with IEP diplomas and 78 percent of students who dropped out had these positive post-school outcomes. While 77 percent of all students transitioned to employment, only 63 percent of students with IEP diplomas and 69 percent of students who dropped out of school did so.

</tbody>
</table>

* “Other” may include that the student reached maximum age or that reasons were not reported.
** “All” represents the sum of post secondary school and/or competitive employment. It excludes military service.

### School characteristics:
Students from NYC, which has the highest resource needs, had fewer transitions (82 percent) in comparison to students from Rest-of-State (93 percent). Competitive employment was less often reported by students from NYC (57 percent) than by students from the Rest-of-State (78 percent).

### Demographics of Students:
There are no significant differences by gender. Fewer minority students had positive post-school outcomes (85 percent) than did white students (93 percent). Fewer minority students (65 percent) reported competitive employment than did white students (77 percent).

### Based on FFY 2005 baseline:
- Encourage districts to provide better contact information by requesting three distinct sets of contacts instead several individuals all living at the same location.
- Encourage districts to check with student and families to confirm or update contact information. This could be done when they formally notify youth and families about SPP Indicator 14, at Parent-Teacher conferences, IEP meetings and when the student is given their Student Exit Summary prior to graduation.
- Modify “Sampling Methodology” to drop sampling for any school district except for NYC. The work of larger districts in compiling randomly selected student lists and over sampling to address lower response rates will be dropped. These districts will be asked instead to provide lists of all Exiters that include contact information known at the school building the student attends, which is typically more up-to-date with this information than centralized data bases.
Based the first round of data collection, NYC will be asked to increase its sample size as well as provide more up-to-date contact information from the buildings attended by the students. Discussions have begun with city administrators on these and other creative solutions to address the lower response rate.

Contact youth enrolled by the districts by phone at the end of each semester to verify their contact information as soon it is submitted by the school district rather than waiting until the April following school exit. For example calls were made to 2006-07 youth enrolled in the 2006-07 survey pool during November 2007. If these calls prove effective in increasing response rates, they will be repeated in subsequent cycles.

In addition to discussing their post-school status, provide interviewed students and/or their families with lists of services that may assist the student to obtain more successful outcomes, including returning to school, if the student has dropped out.

New Baseline Data for FFY 2008 (2008-09 school year Exiters)

Federal changes in the definition of the indicator in March 2009 necessitated resetting a new baseline with students who exited school in FFY 2008. Data reported below for 2008-09 comprise the State’s new baseline data; they cannot be compared to prior years’ data for this indicator.

Data on Exiters from the 2007-08 school year was collected on schedule but not reported as part of the APR that was submitted February 2010. However, individual school district reports were publicly reported.

Baseline Data for FFY 2009

A. 43 percent of youth (n=876) who are no longer in secondary school and had IEPs in effect at the time they left school were enrolled in higher education;

B. 64 percent of youth (n=1,314) who are no longer in secondary school and had IEPs in effect at the time they left school were enrolled in higher education or were competitively employed (n=438) (note – results for B include results for A); and

C. 77 percent of youth (n=1564) who are no longer in secondary school and had IEPs in effect at the time they left school were enrolled in higher education or in some other post-secondary education or training program (n=135), or competitively employed or in some other employment (n=115) within one year of leaving high school. (note- results for C include results for B and results for A)

3,820 Exiters were included in the survey pool. Of these targeted 3,820 students from 109 school districts (NYC counts as one district), 2,041 were available for interview, for a response rate of 53 percent.

Measure 1 = 876 respondent Exiters were enrolled in “higher education.”
Measure 2 = 438 respondent Exiters were engaged in “competitive employment” (and not counted in 1 above).
Measure 3 = 135 of respondent Exiters were enrolled in “some other postsecondary education or training” (and not counted in 1 or 2 above).
Measure 4 = 115 of respondent Exiters were engaged in “some other employment” (and not counted in 1, 2, or 3 above).

To calculate the above indicator percentages, the following calculations were used:

\[ A = \frac{1}{\text{total respondents}}; \frac{876}{2041} = 43\% \]
\[ B = \frac{1 + 2}{\text{total respondents}}; \frac{876 + 438}{2041} = 64\% \]
\[ C = \frac{1 + 2 + 3 + 4}{\text{total respondents}}; \frac{876 + 438 + 135 + 115}{2041} = 77\% \]

### Table 3 - 2008-09 Post-School Outcomes

* “Post-school outcomes” are defined differently than in past years – see definition section for Indicator 14, which has been updated consistent with new federal definitions. For example, higher education only includes two- and four-year colleges and competitive employment includes military service.

### Discussion of FFY 2008 Baseline Data:

#### Representativeness of FFY 2008 Survey Pool

Table 4 addresses the representativeness of the FFY 2008 survey pool compared with all Exiters from all school districts during school year 2008-09. The “survey pool” refers to the group of students that school districts identified for the contractor, PIAR, to interview during FFY 2009. The NPSO recommends using a +/-3 percent difference to evaluate the representativeness of the demographic subgroups reported in Table 5. Per this criterion, the baseline survey pool is representative of disability subgroups and gender.
• Minority students and students who dropped out of school are under represented by 8.2 percent and 6.3 percent respectively.
• Analysis of representation by geographic region show that, for the Big Five Cities included in the sample, the “All Other Disabilities” category is under represented by 12.2 percent (16.9 percent vs. 29.2 percent) and that students who dropped out was also under represented by 7.8 percent (32.8 percent vs. 40.6 percent).
• For the Rest-of State, the “All Other Disabilities” category is slightly over represented by 3.1 percent (33.7 percent vs. 30.5 percent), students who dropped out are slightly under represented by 3.3 percent (13.3 percent vs. 16.6 percent), and Minority students are slightly under represented by 4.4 percent (17.2 percent vs. 21.7 percent).

<table>
<thead>
<tr>
<th>Table 4: Representativeness of Survey Pool Compared to Exiters for All NYS Schools During 2008-09, as reported in VR10 Data Reports.</th>

</tr>
<tr>
<td>Census Representation (n=30,012)</td>
</tr>
<tr>
<td>Survey Pool Representation (n=3820)</td>
</tr>
<tr>
<td>Difference</td>
</tr>
</tbody>
</table>

Note: Positive difference indicates over-representation; negative difference indicates under-representation on the interview pool.

Note: The State report of all Exiters from special education from all schools is called the “VR-10” report. Totals from this report were adjusted to remove data for students who remained in school but were declassified and did not have an IEP in effect at school exit, who died, or whose reason for exit was a transfer to another school.

The consent process itself influences the composition of the survey pool. The consent process requires school districts to contact potential Exiters and their families prior to the student exiting school to inform them about Indicator 14 activities, to obtain contact information and to make them aware they can expect to be interviewed a year after leaving school. Minority students and students who dropped out are disproportionately from New York City and other High Need Urban/Suburban districts in NYS. The contact information on file is more often out-of-date in these urban districts, and more difficult to update, than in other school districts. If a district cannot contact potential Exiters or their families or if there is a refusal of consent, the student is removed from the survey pool.
Representativeness of FFY 2008 Response Pool

Table 5 addresses the representativeness of the response pool compared with the VR-10 report about all Exiters. The response pool is comprised of the students from the survey pool who were actually reached for interview at least one year after leaving school. Using the PSO criteria described above to evaluate representativeness of subgroups, the response pool is representative of gender and all disability groups except All Other Disability which is over represented by 5.8 percent (31.7 percent vs. 25.9 percent). Minority students are under represented by 14.3 percent (32.4 percent vs. 46.6 percent). Students who left by dropping out are also under represented by 11.1 percent (14.5 percent vs. 25.5 percent) The factors contributing to under representation by these groups include their over/under representation in the survey pool of students referred by the schools for interview, and lower group response rates to efforts made to contact former students for interview.

**Post-school outcomes** are defined differently than in past years – see definition section for Indicator 14, which has been updated consistent with new federal definitions. For example, higher education only includes two- and four-year colleges and competitive employment includes military service.

***“Other” may include that the student reached maximum age or that reasons were not reported.

Examination of postsecondary participation shows that Exit Type significantly affects postsecondary education:

- 61 percent of Exiters with Regents, Local or High School Equivalency diplomas report they are in 2- or 4 year college or university and three (3) percent report participation in other types of postsecondary education.
- Four (4) percent of those who dropped out report they are in 2- or 4- year college or university and seven (7) percent report participation in other types of postsecondary education.
- For those with IEP diplomas, 13 percent report they are in 2- or 4 year college or university and 18 percent report participation in other types of postsecondary education or training programs. Half of this 18 percent is due to participation in rehabilitation programs.

---

3 Other postsecondary or training program includes Vocational Technology College (< 2-year), Trade Apprenticeship, or WIA - One Stop, Job Corp, continuing education classes or Ameri Corps, GED or Adult Basic Education (ABE) Program, College Preparatory, Rehabilitation Services and Other

### New Baseline Data and targets established beginning with FFY 2008

<table>
<thead>
<tr>
<th>FFY (school year students left)</th>
<th>Measurable and Rigorous Target</th>
</tr>
</thead>
</table>
| **2008*** (2008-09) BASELINE   | Baseline =  
A. 43 percent will be enrolled in higher education for at least one complete term;  
B. 64 percent will be enrolled either in higher education or being competitively employed (note – target for B includes target for A);  
C. 77 percent will be enrolled in higher education or in some other postsecondary education or training program, or competitively employed or in some other employment within one year of leaving high school. (note - target for C includes targets for B and for A)  
Based on post-school outcomes of school Exiters during 2008-09, a new baseline and targets are being established using the new Measurement categories and reported in the SPP due February 1, 2011. |
| **2009*** (2009-10)            | A. 43 percent will be enrolled in higher education for at least one complete term;  
B. 64 percent will be enrolled either in higher education or being competitively employed (note – target for B includes target for A);  
C. 77 percent will be enrolled in higher education or in some other postsecondary education or training program, or competitively employed or in some other employment within one year of leaving high school. (note - target for C includes targets for B and for A) |
### FFY (school year students left) | Measurable and Rigorous Target
---|---
**2010*** (2010-11) | A. 44 percent will be enrolled in higher education for at least one complete term;  
B. 65 percent will be enrolled either in higher education or being competitively employed (note – target for B includes target for A);  
D. 78 percent will be enrolled in higher education or in some other postsecondary education or training program, or competitively employed or in some other employment within one year of leaving high school. (note- target for C includes targets for B and for A)

**2011*** (2011-12) | A. 44 percent will be enrolled in higher education for at least one complete term;  
B. 65 percent will be enrolled either in higher education or being competitively employed (note – target for B includes target for A);  
C. 80 percent will be enrolled in higher education or in some other postsecondary education or training program, or competitively employed or in some other employment within one year of leaving high school. (note - target for C includes targets for B and for A)

**Percent of youth with IEPs** refers to the percent of students who could be reached for interview.  
**In these targets, competitive employment excluded military service. The change in the measure in March 2009 will require including individuals with military service to the competitive employment outcome.**  
*** In FFY 2009, the United States Education Department (USED) requested states to add two additional years to the SPP, including adding two additional years of targets.

### Improvement Activities/Timelines/Resources:
Improvement activities center around efforts to target technical assistance and transition funding based on gaps identified in the baseline data for students at-risk of dropping out and who exit with IEP diplomas and in improving the reliability and validity of data collected on this measure. Assistance will be provided regarding development of student samples of an adequate size to offset anticipated low response rates.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

Monitoring Priority: Effective General Supervision Part B / General Supervision

Indicator 15: General supervision system (including monitoring, complaints, hearings, etc.) identifies and corrects noncompliance as soon as possible but in no case later than one year from identification.
(20 U.S.C. 1416 (a)(3)(B))

Measurement:

Measurement Used through 2006

A. Percent of noncompliance related to monitoring priority areas and indicators corrected within one year of identification:
   a. # of findings of noncompliance made related to monitoring priority areas and indicators.
   b. # of corrections completed as soon as possible but in no case later than one year from identification.
   Percent = b divided by a times 100.

B. Percent of noncompliance related to areas not included in the above monitoring priority areas and indicators corrected within one year of identification:
   a. # of findings of noncompliance made related to such areas.
   b. # of corrections completed as soon as possible but in no case later than one year from identification.
   Percent = b divided by a times 100.

C. Percent of noncompliance identified through other mechanisms (complaints, due process hearings, mediations, etc.) corrected within one year of identification:
   a. # of agencies in which noncompliance was identified through other mechanisms.
   b. # of findings of noncompliance made.
   c. # of corrections completed as soon as possible but in no case later than one year from identification.
   Percent = c divided by b times 100.

In 2006, the United States Education Department (USED) revised the baseline measurement for this indicator as follows:

Percent of noncompliance corrected within one year of identification:
   a. # of findings of noncompliance.
   b. # of corrections completed as soon as possible but in no case later than one year from identification.
Percent = \left[ \frac{b}{a} \right] \times 100.

For any noncompliance not corrected within one year of identification, describe what actions, including technical assistance and/or enforcement that the State has taken.

Data Source:

New York State (NYS) uses data taken from State monitoring, complaints, hearings and other general supervision system components.

Overview of Issue/Description of System or Process

The State Education Department (SED) has developed an array of formal monitoring protocols for the review of public school districts, BOCES, approved private day and residential schools, child care institutions, charter schools, approved preschools, State supported schools, incarcerated youth, etc. These protocols comprise the Special Education Quality Assurance (SEQA) on-site monitoring process. Some versions of these protocols reflect a comprehensive array of regulatory requirements (while other versions reflect “focused monitoring” which include only those regulatory requirements that are considered most closely aligned with the focus of the review. In any given school year, a sample number of school districts and non-district programs around the State are identified for a formal monitoring review.

School districts and community school districts (in New York City) are selected for monitoring based on SPP data. Beginning with 2006-07, the Office of Special Education (OSE) aligned the selection criteria with specific Indicators related to graduation rates, drop out rates and performance on elementary and middle level English language arts and mathematics State assessments in order to identify the districts with the poorest performance. Secondary factors include date of last review, other SED interventions, number of founded complaints during the last three years and regional SEQA staffing resources. Input from regional network partners is considered prior to a final determination being made jointly by the SEQA Regional Supervisor and the BOCES District Superintendent.

In addition to the on-site monitoring activities described above, SED now collects data specific to SPP Indicators 4, 9, 10, and 13, through a district self-review process (see specific indicators for details) and data specific to Indicators 11 and 12, through the PD system (see specific indicators for details). Districts reporting noncompliance in these areas are required to correct all instances of noncompliance within one year of identification. Baseline data in these areas will be reported in the February 2007 SPP and issues of noncompliance identified through these processes will be reported in subsequent years.

In addition to the monitoring of public school programs, SEQA (both in NYC and upstate) monitors a selection of private sector programs each year. SEQA regional offices have a designated caseload of approved private preschool, day and residential schools, and/or State-operated schools, charter schools, agency programs (OMRDD, OMH) as well as programs offered through the Office of Children and Family Services
(OCFS). Additionally, SEQA reviews child-specific approvals of private residential school age programs that serve NYS students with disabilities receiving Emergency Interim Placement. Due to the number of schools in these categories, the selection of these programs for monitoring is determined through a review of data, incidence of formal complaints, and stakeholder input (contracting school districts, parents, other State agency and/or education department review). Monitoring priorities are also established by SEQA in consideration of major policy/regulatory implementation.

NYS uses a data based computer system, Quality Assurance Information System (QAIS), to track all monitoring reviews conducted in each Regional Office across the State. Each review is individually logged as soon as selections are made and data is entered at all critical stages (date of initiation, final report issued, compliance issues identified, compliance assurance plans and due dates, status of each issue, date of corrective action(s), date of resolution, etc). Regional Office supervisors use a variety of means to monitor timelines (internal logs, QAIS, status reports).

NYS also uses QAIS to track all written signed complaints received by OSE by each SEQA office. All correspondence meeting this criterion are logged into this system. SEQA staff also use an additional internal log to ensure accurate data collection. Formal complaints are individually logged and the data is entered at all critical stages (60th day, findings issued, specific issues involved, status of each issue, due date for corrective action(s), date of resolution, etc.) SEQA supervisors use a variety of means to monitor timelines such as internal logs, QAIS and complaint summaries.

**Baseline Data for FFY 2004 (2004-05) - Reported in the SPP submitted in 2006**
The State's baseline on the percent of issues of noncompliance identified that were corrected within one year of the report being issued, based on the revised measurement standard, is **81.20 percent.**

<table>

Discussion of Baseline Data

All findings of noncompliance identified through monitoring activities and through the State complaint process are reflected in the table above. Most of the reviews included in the baseline data were focused in nature, targeting primarily the priority areas and indicators, and those that were not focused were heavily weighted in the priority areas.
For all school districts outside of NYC, the focused review process has been redesigned to ensure formal follow-up by SEQA staff during the second and third years following initiation of the review. The role of SETRC in providing technical assistance to school districts in resolution of noncompliance has been strengthened. Additionally, SEQA managers, along with BOCES District Superintendents, now have responsibility for determining the allocation of SETRC resources on a regional basis to meet the specific training and technical assistance needs of districts.

In NYC, the process is different due to the organizational structure of NYC DOE. The NYC SEQA regional office is responsible for this one school district and conducts focused reviews in each instructional region every year. As a result, follow-up activities occur simultaneous to the implementation of a new focused review. For this reason, the NYC SEQA regional office designs focused monitoring protocols each year that are representative of the current issues affecting students with disabilities.

For any noncompliance not corrected within the timeline prescribed on the corrective action plan, NYS has implemented a hierarchy of enforcement procedures on a case-by-case basis. Those steps have included written communication with district/agency administrators, Boards of Education and BOCES District Superintendents. In some cases IDEA funds have been frozen or withheld until such time that the district/agency makes adequate progress toward correcting noncompliance. In some cases, IDEA funds have been redirected to address areas of noncompliance.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1.

**Monitoring Priority: Effective General Supervision**

**Indicator 16:** Percent of signed written complaints with reports issued that were resolved within 60-day timeline or a timeline extended for exceptional circumstances with respect to a particular complaint, or because the parent (or individual or organization) and the public agency agree to extend the time to engage in mediation or other alternative means of dispute resolution, if available in the State.

(20 U.S.C. 1416(a)(3)(B))

Note: The Indicator definition was expanded in March 2009 per the United States Education Department (USED) guidance to specify that the time limit could be extended by mutual agreement to engage in mediation or alternate means of dispute resolution.

**Measurement:**

Percent = (1.1(b) + 1.1(c)) divided by (1.1) times 100. (This formula references data contained in the rows of the table below labeled, “Attachment 1: Section A.”)

**Data Source:**

New York State (NYS) will use data collected and reported annually to USED in the 618 report on Table 7 of Information Collection 1820-0677 (Report of Dispute Resolution Under Part B of the Individuals with Disabilities Education Act (IDEA)).

**Overview of Issue/Description of System or Process**

Section 200.5 of the Commissioner’s Regulations establishes the State’s complaint procedures. An organization or individual may file a signed written complaint to the State Education Department (SED). The complaint must include a statement that the school district or SED has violated a federal or State law or regulation relating to the education of students with disabilities, and the facts upon which the statement is based.

The complaint must be received within one year of the date of the alleged violation. The original signed complaint must be filed with the Office of Special Education (OSE) at SED.

Upon receipt of a complaint, SED provides the complainant with a written notice of receipt of the complaint and the complainant’s right to submit additional information, either orally or in writing, regarding the allegations in the complaint. SED may require a school district to submit a written reply to the complaint.
All relevant information is reviewed and SED staff may conduct an on-site investigation where the Department determines such investigation is necessary. SED issues a written final decision that addresses each allegation in the complaint; contains findings of fact and conclusions; and sets forth the reasons for the final decision. The report sets aside any part of the complaint that is currently being addressed in an impartial hearing held pursuant to Education Law section 4404. Upon a finding of a violation of a federal or State law or regulation relating to the education of students with disabilities, the decision includes, if necessary for implementation of the decision, technical assistance activities, negotiations, and corrective actions to achieve compliance. Upon a finding of failure to provide appropriate services to an individual student with a disability, the decision includes remediation of the denial of services, including, as appropriate, the awarding of monetary reimbursement or other corrective action appropriate to the needs of the student and appropriate future provision of services for all students with disabilities.

The decision must be issued within 60 calendar days of receipt of the complaint except where exceptional circumstances exist with respect to a particular complaint. Where an issue raised in a complaint has been previously decided in an impartial hearing held pursuant to Education Law section 4404 involving the same parties, SED notifies the complainant that the impartial hearing decision is binding.

NYS uses a database computer system to track all written signed complaints received in each Regional Office across the State. All written signed complaints are logged into this system. Regional offices also use an additional internal log to ensure accurate data collection. Formal complaints are individually logged and data is entered at all critical stages (60th day, findings issued, specific issues involved, status of each issue, date of corrective action(s), date of resolution, etc). Regional Office supervisors use a variety of means to monitor timelines (e.g., logs, QAIS, complaint summaries).

**Baseline Data for FFY 2004 (2004-05)**

The percentage of signed written complaints resolved within the 60-day timeline or a timeline extended for exceptional circumstances with respect to a particular complaint was **94.8 percent**. This baseline data reflects revised data submitted to OSEP on March 22, 2006, with a minor correction (from 94.7 to 94.8 percent) made.

**Discussion of Baseline Data**

The table below shows that there were 246 complaints that required resolution. Of this number, 233 were resolved within the 60-day timeline and an additional five were resolved with documented extensions. There were eight complaints not resolved within the required time period. (Also see Attachment 1.) The few complaints that were not resolved within the required time period resulted from unexpected personnel absences and/or the complex nature of the complaint.

<table>
<thead>
<tr>
<th>Monitoring Priority: Effective General Supervision Part B / General Supervision</th>
</tr>
</thead>
</table>

**Indicator 17**: Percent of adjudicated due process hearing requests that were fully adjudicated within the 45-day timeline or a timeline that is properly extended by the hearing officer at the request of either party or in the case of an expedited hearing, within the required timelines.
(20 U.S.C. 1416(a)(3)(B))

**Measurement:**

Percent = (3.2(a) + 3.2(b)) divided by (3.2) times 100. (This formula references data contained in the rows of the table below labeled, “Attachment 1: Section C.”)

**Data Source:**

New York State (NYS) will use data collected and reported to the United States Education Department (USED) annually in the 618 report on Table 7 of Information Collection 1820-0677 (Report of Dispute Resolution Under Part B of the Individuals with Disabilities Education Act (IDEA)).

**Overview of Issue/Description of System or Process**

Section 4404 of NYS Education Law and section 200.5 of the Commissioner's Regulations establish the procedures for impartial hearings. The board of education (BOE) must begin the process to select and appoint an impartial hearing officer (IHO) no later than two business days after receipt of the request. The IHO is expected to initiate the hearing within 14 days of receipt of the notification of the end of the resolution session. The IHO has to render a decision no later than 45 calendar days after the completion or written waiver of the resolution session for a school age child, 30 calendar days after the completion or written waiver of the resolution session for a preschool child and 15 days after a request for an expedited impartial hearing involving discipline.

At the request of either party the IHO may extend the time for a specific period. NYS regulation limits any extension to 30 days. NYS regulations also indicate “absent a compelling reason or a specific showing of substantial hardship, a request for an extension shall not be granted because of school vacations, a lack of availability resulting from the parties' and/or representatives' scheduling conflicts, settlement discussions between the parties or other similar reasons. Agreement of the parties is not a sufficient basis for granting an extension.”
For school-age and preschool cases where extensions of time have been granted beyond the applicable required timelines, the decision must be rendered and mailed no later than 14 days from the date the IHO closes the record. For expedited impartial hearings for disciplinary cases, the decision must be rendered no later than five business days after the last hearing date, but no later than 45 calendar days after receipt of the hearing request.

School districts are required to report data regarding the impartial hearing process, including IHO appointments, timelines, extensions, and closures through Impartial Hearing Reporting System (IHRS). IHRS is a web-based system and provides real time information. Each school district and IHO has access to information on any case in which they are involved.

IHRS is used to monitor the timeliness of BOE appointments of IHOs and whether a decision is rendered within the timelines specified above. On a daily basis, IHRS sends an initial notification to any school district that fails to make a timely IHO appointment and to both the school district and IHO if a decision is not received within five days of the appropriate time lines. A second notification is sent to the school district and the IHO if a decision continues to be late for four days beyond the initial notification date. E-mail responses to the initial and second notifications are monitored. If either the school district or IHO fail to respond to the notifications, personal contact is made to determine if the lateness is a school district data entry issue or if the IHO has failed to render the decision within the timeline or extended timeline.

**Baseline Data for FFY 2004 (2004-05)**

The percent of due process hearing requests that were fully adjudicated within the 45-day timeline or a timeline that was properly extended by the hearing officer at the request of either party was 83.5 percent.

<table>
<thead>
<tr>
<th>2004-05</th>
<th>Attachment 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>SECTION C: Hearing requests</td>
<td></td>
</tr>
<tr>
<td>(3) Hearing requests total</td>

</tbody>
</table>

Measurement Formula: $481 (3.2a) + 599 (3.2b) = 1080$ divided by $1294 (3.2) = .8346 \times 100 = 83.5\%$

** 2004-05 data was not collected in the manner requested in SPP/APR attachment 1.
Discussion of Baseline Data

- IHRS has been in operation since July 1, 2002. The total number of impartial hearing requests has increased in the last three years, from 4542 in 2002-03 to 5422 in the baseline year of 2004-05.

- The following trends have been observed between 2002-03 and the baseline year 2004-05:
  - The percentage of fully adjudicated hearing requests has decreased from 28.6 percent of the total number of requests in 2002-03 to 23.8 percent in 2004-05.
  - The percentage of fully adjudicated hearing requests that are timely within the original (15 days expedited, 30 days CPSE, 45 days CSE) time line has decreased from 45.78 percent in 2002-03 to 37.17 percent in 2004-05.
  - The percentage of fully adjudicated hearings that are timely within extended time lines has increased from 37.94 percent in 2002-03 to 46.39 percent in 2004-05.

- The percentage of hearing requests that are not fully adjudicated and are either settled or withdrawn has remained fairly constant, with 71.3 percent in 2002-03 to 71.9 percent in 2004-05.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan Development preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

<table>
<thead>
<tr>
<th>Monitoring Priority: Effective General Supervision Part B / General Supervision</th>
</tr>
</thead>
</table>

**Indicator 18:** Percent of hearing requests that went to resolution sessions that were resolved through resolution session settlement agreements. (20 U.S.C. 1416(a)(3)(B))

**Measurement:**

Percent = 3.1(a) divided by (3.1) times 100. (This formula references data contained in the rows of the table below labeled, “Attachment 1: Section C.”)

**Data Source:**

NYS will use data collected and reported to the United States Education Department (USED) annually in the 618 report on Table 7 of Information Collection 1820-0677 (Report of Dispute Resolution Under Part B of the Individuals with Disabilities Education Act (IDEA)).

**Overview of Issue/Description of System or Process:**

Education law section 4404 and section 200.5(j) of the Commissioner’s Regulations establish the requirements for a resolution session prior to the opportunity for an impartial due process hearing. Consistent with the requirements in federal law, the purpose of the resolution session is to discuss the due process complaint notice and the facts that form the basis of the complaint request. The resolution session provides the school district with the opportunity to resolve the complaint prior to the initiation of an impartial hearing. The parents and the school district may agree in writing to waive the resolution session or agree to use the mediation process to resolve the dispute. If the parent and school district reach an agreement to resolve the complaint at a resolution session, the parties must execute a legally binding agreement.

**Plan to Collect Baseline Data**

The Impartial Hearing Reporting System (IHRS) will be revised to begin collecting the resolution session information in February of 2006. IHRS is a real time reporting system to monitor the timeliness of impartial hearings. School districts will be required to enter
data on the number of resolution sessions held, the length of the sessions and the results of the sessions.

By January 2006, VESID will notify school districts on the school district’s responsibility to input data into the IHRS, beginning in the 2005-06 school year, on the percent of resolution sessions that result in resolution agreements.

VESID will collect data beginning in February 2006 on the percent of resolution sessions that result in resolution agreements. On an ongoing basis, VESID will provide technical assistance to school districts on how to report data on resolution sessions. VESID will analyze the data after five months of resolution session data (June 2006) to ensure that data elements collected are appropriate to assist in trend analysis. Revisions, as appropriate, will be made to IHRS and the data collection process if needed.

**Baseline Data for FFY 2005 (2005-06)**

IHRS was revised to collect the resolution session information beginning on April 1, 2006. IHRS is a real time reporting system to monitor the timeliness of impartial hearings. School districts are required to enter data on the number of resolution sessions held, the length of the sessions and the results of the sessions. VESID will analyze the data to ensure that data elements collected are appropriate to assist in trend analysis. Revisions, as appropriate, will be made to IHRS and the data collection process if needed.

**Baseline Data for FFY 2005 (2005-06)**

17.2 percent of hearing requests that went to resolution sessions were resolved through resolution session settlement agreements.

<table>
<thead>
<tr>
<th>7/1/2005 - 6/30/2006</th>
<th>Attachment 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>SECTION C: Hearing Requests</td>
<td></td>
</tr>
<tr>
<td>(3) Hearing requests total</td>
<td>987</td>
</tr>
<tr>
<td>(3.1) Resolution sessions</td>
<td>959</td>
</tr>
<tr>
<td>(a) Settlement agreements</td>
<td>170</td>
</tr>
</tbody>
</table>

Percent = 170 [3.1(a)] divided by 959 (3.1) times 100 = 17.73%.

**Discussion of Baseline Data**

Although the data was collected for a quarter of the school year it does not represent a quarter of the annual activity, the fourth quarter is generally the quarter with the least number of requests. The data will be used to set initial targets that will be reviewed upon collection of a full year of data.

Overview of the State Performance Plan Development

See Overview of the State Performance Plan (SPP) Development preceding Indicator 1. In addition, New York State (NYS) consulted with its Commissioner’s Advisory Panel for Special Education Services (CAP) to establish extended targets and improvement activities for Federal Fiscal Year (FFY) 2011 and FFY 2012. The State’s technical assistance and support networks were also involved in these discussions.

**Monitoring Priority: Effective General Supervision Part B / General Supervision**

**Indicator 19:** Percent of mediations held that resulted in mediation agreements.
(20 U.S.C. 1416(a)(3)(B))

**Measurement:**
Percent = (2.1)(a)(i) + 2.1(b)(i)) divided by (2.1) times 100. (This formula references data contained in the rows of the table below labeled, “Attachment 1: Section B.”)

**Data Source:**
NYS will use data collected and reported to the United States Education Department (USED) annually in the 618 report on Table 7 of Information Collection 1820-0677 (Report of Dispute Resolution Under Part B of the Individuals with Disabilities Education Act (IDEA)).

**Overview of Issue/Description of System or Process**

Section 4404-a of NYS Education Law and section 200.5 of the Commissioner's Regulations establish the procedures for mediation as a means for parents and school districts to resolve disagreements regarding the education of a student with a disability.

The State Education Department (SED) contracts with the New York State Dispute Resolution Association (NYSDRA) to oversee the special education mediation process. In NYS, independent mediators furnished by a Community Dispute Resolution Center through the Office of Court Administration, conduct mediation sessions. SED and NYSDRA jointly develop training programs, which NYSDRA provides to the mediators.

**Baseline Data for FFY 2004 (2004-05)**

The percent of mediation sessions held in 2004-05 that resulted in mediation agreements to resolve the dispute was 95.50 percent.

**Discussion of Baseline Data**

The baseline data for 2004-05 that was submitted in the 2006 SPP has been revised. The original data submitted contained a double count of mediation cases which affected
each of the categories. This double count adversely affected the percent of mediations resulting in agreement. In addition the calculation of percent of mediation agreements was calculated using the number of mediations requested not the number of mediations held. The data does not distinguish between the number of agreements resulting from mediations initiated separate from due process requests and those mediations that result from due process requests. NYS will begin to collect data that identifies whether the mediation request preceded a request for an impartial hearing in 2005-06.

| Attachment 1 |
| SECTION B: Mediation requests |
| 9/1/02-8/31/03 | 9/1/03-8/31/04 | 9/1/04-8/31/05 |
| 2) Mediation requests total | 468 | 400 | 511 |
| 2.1 Mediations | 356 | 292 | 379 |
| (a) Mediations related to due process | **Not available** | **Not available** | **Not available** |
| (i) Mediation agreements | **Not Available** | **Not Available** | **Not Available** |
| (b) Mediations not related to due process | 356 | 292 | 379 |
| (i) Mediation agreements | 353 | 287 | 362 |
| 2.2 Mediations not held (including pending) | 112 | 108 | 132 |

**Note: 2004-05 data was not collected in the manner requested in SPP/APR attachment 1**

As the table above indicates, there has been an increase in the number of mediation sessions requested in the last three years from 486 mediation sessions during the period 9/1/02–8/31/03 to 511 requested during 9/1/04–8/31/05 and the percent of mediation sessions resulting in agreement has decreased from 99.16 percent in 2002-03 to the current 95.50 percent in 2004-05. Other than an increase in the number of hearings not held or pending it is not clear what has contributed to the decrease in the percent of mediations resulting in agreement.

<table>
<thead>
<tr>
<th>Monitoring Priority:</th>
<th>Effective General Supervision Part B / General Supervision</th>
</tr>
</thead>
</table>

**Indicator 20:** State reported data (618 and State Performance Plan (SPP) and Annual Performance Report (APR)) are timely and accurate.

(20 U.S.C. 1416(a)(3)(B))

**Measurement:**

State reported data, including section 618 data, SPP, and Annual Performance Reports (APRs), are:

a. Submitted on or before due dates (February 1 for child count, including race and ethnicity, placement; November 1 for exiting, discipline, personnel and dispute resolution; and February 1 for APRs and assessment); and
b. Accurate, including covering the correct year and following the correct measurement.

States are required to use the “Indicator 20 Scoring Rubric” for reporting data for this Indicator.

**Data Source:**

New York State (NYS) will use state selected data sources, including data from State data system and SPP/APR.

**Overview of Issue/Description of System or Process**

The State Education Department (SED) maintains various systems to collect, edit, verify and report valid, reliable and accurate data to meet all State and federal data collection requirements for accountability and program improvement. The federal reporting requirements include the SPP, APR, and United States Education Department (USED) data collection requirements in section 618 of IDEA which include data on Child Count, LRE, Exiting, Discipline, Personnel, State Assessments and Due Process.

Beginning in the 2005-06 school year, the SPP has significantly added to the need for data collection by requiring data from the State on 20 federal “indicators.” The areas requiring collection and analysis of new types of data include:

- Discrepancies in long-term (more than 10 days) out-of-school suspensions based on race and ethnicity.
- Outcomes for children who receive preschool special education programs and/or services.
Parents who report that schools facilitated parent involvement as a means of improving services and results for children with disabilities.

School districts with inappropriate policies, practices and procedures related to identification of children for special education or their identification by particular disabilities.

Timely evaluation of preschool and school-age children for special education services.

Timely evaluation and services for preschool children who transition from eligibility under Part C of IDEA to Part B of IDEA.

Reviews of IEPs of youth, aged 15 and above, related to IEP goals and transition services.

Post high school outcomes for students with disabilities one year after leaving high school.

Due process hearings that went to resolution sessions and were resolved through resolution session settlement agreements.

Mediations that are related to due process proceedings.

NYS maintains the following systems for collecting data required under section 618 of IDEA and for the SPP:

- The PD System collects data on child count, LRE, exiting, discipline and personnel for students with disabilities. This system is a web-based system that allows school districts to submit, review and revise data according to established timelines. Data undergo many edit checks that are integrated into the PD data submission system to ensure their internal consistency and accuracy. Reasonability checks are also conducted annually before data are finalized to further enhance data accuracy. Data reliability is ensured by maintaining consistent definitions and formats for data collection and providing consistent technical assistance and training. Data validity is ensured by designing the aggregate data collection forms consistent with federal requirements and guidelines and maintaining knowledge of changes at the national level. NYS is developing a Student Information Repository System (SIRS), which is an individual student record system that will collect all data required by State and federal laws and regulations at the individual student level with a unique State student identifier. This will make it possible to track a student's performance over the years and across schools and districts within NYS. Most of the data currently collected via the PD system will be collected through this new system. It is anticipated that special education data will be added to the repository beginning in 2007-08 school year. Any remaining student type data that is not added to the repository in 2007-08 will be added in the subsequent year.

- The Local Education Agency Program (LEAP) and System for Tracking Education Performance (STEP) systems collect data on State assessments for all students. The LEAP system collects assessment, program services and some demographic data for students in elementary and middle schools and the STEP system collects similar data for high school students. During the 2005-06 school year, LEAP will be phased out and replaced by SIRS. It is planned that the STEP system will be
replaced by SIRS during the 2006-07 school year. LEAP, STEP and SIRS are supported by the Regional Information Centers (RICs). RICs provide data collection, analysis, reporting, technical assistance and training services to all participating school districts. The State has developed and published an initial listing of standardized definitions and data formats in a data dictionary for SIRS. Individual student level data from all school districts will be housed in a single statewide data warehouse, and all the required State level reports and analysis will be conducted based on these data.

- IHRS collects data on due process proceedings. Section 200.5(i)(3)(xiv) of the Regulations of the Commissioner of Education requires each BOE to report information relating to an impartial hearing in a format and interval prescribed by the Commissioner. The IHRS is a web-based data collection system designed to record information about the impartial hearing process at critical points, beginning with the initial written request for a hearing and ending with the implementation of decisions rendered in the hearing. School districts are required to report data regarding the impartial hearing process, including IHO appointments, time lines, extensions, and closures through the IHRS. The IHRS provides real time information that SED uses to monitor timeliness of hearings and NYS’ due process system to ensure that impartial hearings are completed within the time periods required by federal and State law and regulation. For more information on due process hearings, please refer to Indicator 17.

- QAIS is an Access system used to maintain information about 60-day complaints and quality assurance monitoring reviews. The system is being replaced by CSEIS, which is a web-based system that will provide the State enhanced capacity to manage many special education business processes. Implementation of CSEIS is expected to occur in the spring of 2006. CSEIS will assist the State to track school districts’ compliance with issues identified during reviews, record and resolve complaints within required timelines, and communicate with school districts throughout the review time period until all compliance issues are resolved.

The following SED processes contribute to the timeliness, quality and accuracy of State reported data:
NYS follows a strict protocol in order to ensure timely PD, LEAP, STEP, and SIRS data. All forms and materials pertaining to these data collection systems and forms are posted on the Department’s websites:

- Since the SPP was first written, the LEAP system, which was a source of data, was subsumed by the SIRS system. [http://www.p12.nysed.gov/irs/step/](http://www.p12.nysed.gov/irs/step/) (STEP system).

Due dates are established for forms and dunning procedures are completed for missing data within a short time frame following the due dates. Each year timelines and work plans are developed to ensure that different parts of these projects are completed and reviewed for timely submissions.

NYS has procedures in place to ensure the accuracy and quality of data. NYS completes error identification and correction procedures. These are followed by reasonability checks and completion of verification procedures. In addition, to the extent staff resources allow, SED staff:

- conduct training sessions and provides technical assistance through telephone, e-mail, and websites. Technical assistance is also provided through the NYS SEQA offices, RICs, Regional Special Education Technical Assistance Support Centers (RSE-TASC) and other funded networks.
- attend national training and information sessions and
- participate with general education staff to collaboratively develop manuals, memos and provide technical assistance to school districts.

IHRS uses similar processes to ensure that impartial hearing cases are timely. It contains accurate data on all phases of the hearing from the initial written request to the implementation of decisions rendered by IHOS. The system initially generates an e-mail if there is a late appointment of a hearing officer or a decision is late. After the initial e-mails, a series of phone calls and written contact is made until the decision is rendered. The system also generates an error notice if there is an error made during data entry.

### Baseline Data for FFY 2004 (School Year 2004-05)

All required reports were submitted by their due dates. Revisions were made in response to USED request for verification of December 1, 2004 data and final data was provided for the Annual Congressional Report. Several reports required revisions to correct data reporting errors.

</tr>
</tbody>
</table>

**Discussion of Baseline Data**

All required reports were submitted by their due dates and revised by the deadline date established by WESTAT in order to get the data into the Annual Congressional report.
NYS took the opportunity to revise the 12/1/04 child count and LRE data by July 15, 2005 and plans to submit revised exiting, personnel and discipline data for 2004-05 school year by July 1, 2006. The additional time between November 1, 2005 and July 1, 2006 allows NYS time to complete error corrections and reasonability checks before data are finalized for publication in the Annual Congressional Report. The Department anticipates that with the full implementation of SIRS data system, the timeline for finalizing section 618 data will be shortened.

** 2004-05 data was not collected in the manner requested in SPP/APR attachment 1. 2005-06 data will reflect all the requested categories**
Attachment 2

New York State (NYS) Sampling Methodology for Some Federal Indicators in the 2005-10 SPP, Revised February 2008

NYS will collect data from a statewide representative sample of school districts on six federal indicators. No district will report on all indicators every year except New York City (NYC). All school districts will provide data on all six indicators distributed over a six-year period beginning with the initial year in which data are collected for each indicator. The six indicators are as follows:

- **Indicator 7**: Percent of preschool children aged 3 through 5 with individualized education programs (IEPs) who demonstrate improved: A. Positive social-emotional skills (including social relationships); B. Acquisition and use of knowledge and skills (including early language/communication and early literacy); and C. Use of appropriate behaviors to meet their needs.

- **Indicator 8**: Percent of parents with a child receiving special education services who report that schools facilitated parent involvement as a means of improving services and results for children with disabilities.

- **Indicator 11**: Percent of children who were evaluated within 60 days of receiving parental consent for initial evaluation or, if the State establishes a timeframe within which the evaluation must be conducted, within that timeframe. NYS will use the data from 1/6 of the State’s school districts annually to monitor the requirements of this indicator. All school districts will be monitored on this indicator within the six-year period. The State will require documentation that all self-reported noncompliance is corrected within one year of notification of noncompliance.

- **Indicator 12**: Percent of children referred by Part C prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthdays. NYS will use the data from 1/6 of the State’s school districts annually to monitor the requirements of this indicator. All school districts will be monitored on this indicator within the six-year period. NYS will require documentation that all self-reported noncompliance is corrected within one year of notification of noncompliance.

- **Indicator 13**: Percent of youth with IEPs aged 15 and above with an IEP that includes appropriate measurable post-secondary goals that are annually updated and based upon an age-appropriate transition assessment, transition services, including courses of study, that will reasonably enable the student to meet those postsecondary goals, and annual IEP goals related to the student’s transition services needs, with evidence that the student was invited to the IEP Team meeting where transition services are to be discussed and evidence that, if appropriate, a representative of any participating agency was invited to the IEP Team meeting with the prior consent of the parent or student who has reached the age of majority. NYS
will use the data from 1/6 of the State’s school districts annually to monitor the requirements of this indicator. All school districts will be monitored on this indicator within the six-year period. NYS will require documentation that all self-reported noncompliance is corrected within one year of notification of noncompliance.

- **Indicator 14**: Percent of youth who are no longer in secondary school, had IEPs in effect at the time they left school, and were:

  A. Enrolled in higher education within one year of leaving high school.

  B. Enrolled in higher education or competitively employed within one year of leaving high school.

  C. Enrolled in higher education or in some other postsecondary education or training program; or competitively employed or in some other employment within one year of leaving high school.

NYS has distributed all school districts among six statewide representative samples. These six groups of school districts were tested with ANOVA and there was no statistical difference among the six groups of school districts on the population variables listed in the table below. These population variables were from the 2000 decennial census.

| Census 2000 Population Variables Used to Ensure Each Sample of School Districts is Similar |
|---------------------------------|---------------------------------|---------------------------------|
| population | female poverty head of household | n households in POV |
| n children in families | n unempl over 16 | n house classif in POV |
| n children w/single parent | n in workforce | n households w/ no plumbing |
| n children 5~17 in poverty | n unempl 1999 | n total Households |
| n 5~17 | persons not in POV | n one room Households |
| n 5~17 relevant for school | n classif in POV | n occupied Households |
| n less than 5 | n children in 1 parent family | n over 25 not graduate of HS |
| female head of household | n children in families | n total over 25 |

NYC is the only local educational agency (LEA) in the State with a total enrollment of 50,000 or more students, so it will be represented in each of the six samples.

For Indicators 8 and 13, all school districts will have a choice of reporting data on all eligible students or submitting data on a randomly selected sample of students. For Indicators 7, 11, 12 and 14 no districts except for NYC will be permitted to sample
students who meet the criteria for the indicator. When permitted to sample, the minimum number of students required for the indicators can be obtained by using the sampling calculator provided by the State and the guidelines provided below. The vast majority of school districts will need to submit data on all eligible students on most indicators. For some large school districts if it will be less burdensome to report on a sample of students, the methodology described below (totally random sampling) is likely to produce a sample that is representative of the school district in terms of all variables, since every eligible student has the same chance as another student to be selected for the sample.

The State Education Department (SED) will require that LEAs maintain documentation as described below if they choose to report data on a sample of students. The totally random sampling methodology and required documentation should eliminate selection bias. School districts will be required to over-sample as described below for indicator 8 where poor response rate is a known issue. Also, school districts will be encouraged to provide surveys for indicator 8 in a variety of ways to improve the response rate.

SED will attempt to prevent missing data by first describing precisely what the State needs to collect, providing technical assistance and then following up with school districts to request missing data. The completeness of data collection will improve after the first year and will continue to improve as long as requirements remain unchanged.

All issues of confidentiality will be handled in accordance with the rules and procedures in FERPA. SED will also guard against divulging personally identifiable information by not reporting results when there are less than five students for whom data are available or when those results can be easily calculated based on other data provided.

<td>Through 2007-08, school districts with less than 100 students with disabilities exiting, survey all students. Through 2007-08, School districts with 100 or more students use the sampling calculator. Require 95% confidence interval and plus or minus 5% margin of error. Beginning in 2008-09, only NYC will sample students for this indicator. All other districts assigned to report data will be required to provide data on all children who meet the criteria and no sampling will be permitted.</td>
<td>Same as above</td>
<td>Same as above</td>
</tr>
</tbody>
</table>
The table below demonstrates a schedule for data collection from the six sample groups of school districts on the six federal indicators listed above. Please note:

- **For Indicator 7**, entry assessment data must be collected on all preschool children who are evaluated for preschool special education programs/or services **annually by all school districts**. Sample group 6 reports only entry data in 2005-06 but will not report exit data (i.e., entry to exit progress) until 2010-11. Exit evaluation data must be collected and reported to the State by the sample of school districts as described below.

- **For Indicator 14** (related to post school outcomes), requires school districts to collect contact information on students who will be leaving high school in “Year 1” and collect data on their post-school outcomes in “Year 2”. In order for all school districts to have post-school outcomes data by the 2010-11 school year, all sample groups will need to provide data on two indicators in one of the six years. All school districts will need to do Indicators 7-exit and 14 (Year 2) in the same year.

---

5 Schedule for district cycles of reporting was revised in June 2007 to allow for all data to be collected and reported by 2010-2011, the life of the current State Performance Plan.
